ABSTRACTS FROM CONSULAR REPORTS.

CARTHAGENA, COLOMBIA.—United States Consul E. W. P. Smith reports, under date of July 30, the existence of small-pox in that port, but not in an epidemic form. Six cases have occurred but no deaths. The sanitary regulations of the port are very stringent and rigidly enforced.

DEMERARA, BRITISH GUIANA.—United States Consul P. H. Figyelmesy reports the appearance of yellow fever at Demerara on the 6th of July. To July 25, 14 cases had occurred, 11 of which had proved fatal. The fever thus far has been confined chiefly to persons recently arrived at Demarara.

MALTA AND GOZO.—United States Consul C. B. Eynaud reports a total of 151 deaths during the two weeks ending June 20, among a population of 154,830 on both islands. This statement of the population of the islands does not include the troops, some 7,000, stationed at the garrison. The prevailing disease is enteritis among the children.

NASSAU, NEW PROVIDENCE, BAHAMAS.—United States Consul T. J. McLain reports that the ordinary intermittent and bilious fevers are prevailing. The sanitary condition of the city is good. Weather hot with frequent rains. He also states that a malignant fever prevails to a limited extent in the island of Eleutheria, about 60 miles distant, *rumored* to be yellow fever. The authorities have dispatched a competent physician to make examination and report without delay. The Swedish bark Margaretha arrived yesterday from Hayti, via Inagua, putting in here in distress. She had lost her captain and two men on the voyage from yellow fever. The captain's wife had been ill but is now convalescing. Two others of the crew are ill and have been sent to the quarantine hospital at Athol Island. The bark has also gone to the quarantine station. There is no contagious disease at present upon this island, and the health of Nassau is excellent. The Margaretha is bound to England, with logwood, for orders.

Later advices from Thomas J. McLain, United States consul, state that the fever reported last week as existing at Eleutheria Island has disappeared and is said *not* to have been yellow fever.

RIGA, RUSSIA.—United States Consular Agent N. P. A. Boulboldt reports for the month of June a total of 347 deaths. Of this number there were from consumption, 26; inflammation of the lungs, 23; small-pox, 29; diarrhœa, 16; convulsions, 26; measles, 15; scarlet fever, 10; croup, 15; diphtheria, 7; and typhoid fever, 10.

SAN DOMINGO CITY, SAN DOMINGO.—United States Consul Paul Jones reports the prevalence of small-pox in the city. During the caused month of July there were 64 deaths, of which number 32 were by small-pox.

MERIDEN, CONN.—The report received from Meriden, Conn., for the month of June states that there were 14 deaths during the month. From consumption, 3; diarrhœal diseases, 2; typho-malarial fever, 2, and from other diseases, 7. Of the total number of deaths 5 were of children under five years of age.

QUARANTINE STATION, NEW YORK HARBOR.—Dr. W. M. Smith, health officer of the port of New York, reports, under date of 8th instant, that the steamer British Empire arrived at quarantine four days from Havana, with her captain sick with yellow fever. He also reports that on August 8th the bark R. W. Griffiths, from Havana July 29, arrived with one case of yellow fever on board, the patient having been taken with the disease on the 4th instant. This vessel came to Havana July 21, in ballast, from Matanzas, anchored in the open bay three-fourths of a mile from shore, and none of the crew went ashore while there. On the sixth day out from Havana the case of yellow fever developed, and is believed to have been contracted from the atmosphere of the bay or the cargo or vessel which lightered it to the bark.

THE NATIONAL BOARD OF HEALTH.

OFFICERS.

Carrollton, Miss., 600; no deaths. Columbus, Ga., 10,123; deaths, 5; under 5 years, 3; typhoid fever 2, puerperal 1. Corinth, Miss., 2,264; death, 1; diarrhœa 1. Crystal Springs, 955; no deaths. Decatur, Miss., 1,000; deaths, 2; consumption 2, typhoid fever 1. Fayette, Miss., 400; no deaths. Gunn City, Mo., 150; no deaths. Greenville, S. C., 6,159; deaths, 2; under 5 years, 1; diphtheria 1. Helena, Mont.; death, 1; under 5 years, 1; diarrhœa 1. Hernando, Miss., 1,000; death, 1; malarial fever 1. Huntingdon, Tenn., 1,200; death, 1; consumption 1. Iuka, Miss., 816; deaths, 2; under 5 years, 1; diarrhœa 1. erysipelas 1. Jefferson, Tex., 3,250; no deaths. La Salle, Ill., 8,885; deaths, 5; under 5 years, 3; diarrhœa 3, consumption 1, accident 1. Louisiana, Mo., 5,000; deaths, 2; under 5 years, 1; consumption 1. diarrhœa 1. Madison, Ind., 9,009; deaths, 6; under 5 years, 3; consumption 2. Martinsburg, 6,334; no deaths. Milan, Tenn., 1,800; death, 1; consumption 1. Milford, Mich., 1,400; no deaths. Milledgeville, Ga., 3,000; deaths, 2; under 5 years, 1; consumption 1, diarrhœa 1. Muscatine, Iowa, 8,412; deaths, 3; consumption 2. Muskegon, Mich., 11,300; deaths, 13; accident 1, consumption 1, diarrhœa 4, diphtheria 1, malarial fever 3, measles 1. Painesville, Ohio, 5,504; deaths, 3; under 5 years, 2; diarrhœa 2. Pass Christian, Miss., 1,500; no deaths. Pearlington, Miss., 1,200; deaths, 3; consumption 1. Pleasant Hill, Miss., 253; no deaths. Port Gibson, Miss., 1,200; death, 1; diarrhœal disease 1. Port Royal, S. C., 750; death, 1; under 5 years, 1; diarrhœal 1. Rensselaer, Ind., 900; no deaths. Santa Cruz, Cal., 6,000; deaths, 2; under 5 years, 1. Senatobia, Miss., 935; no deaths. Starkville, Miss., 1,454; deaths, 3; under 5 years, 3; diarrhœal 3. Tampa, Fla., 740; death, 1; under 5 years, 1. Titusville, Pa., 9,046; deaths, 2; under 5 years, 1; diarrhœa 1. Tuskaloosa, Ala., 2,017; death, 1. Winchester, Va., 5,000; deaths, 4; under 5 years, 2; diarrhœa 2. Winona, Tex., 12,000; deaths, 7; under 5 years, 2; consumption 2, diarrhœa 4, malarial 1. Youngstown, Ohio, 15,121; deaths, 13; under 5 years, 11; diarrhœa 11, congestion of lungs 1, bronchitis 1. Total population, 240,111; deaths under 5 years, 55; total number of deaths, 123; annual rate per 1,000, 26.7.

NOTICE.—In filling the reports on the postal cards for cities and hospitals, the figures are frequently so placed between the lines as to leave the disease intended entirely uncertain, except in cases where the judgment of the compiler may enable him to determine which is meant. This may be avoided by a stroke of the pen after the disease to be recorded. The *total* numbers should be placed in their proper columns, and no figures placed immediately after the word *total* will be noted in the tables. Those who report *still-births* will please note them separately, as they are not included in the tables of mortality in the BULLETIN.

NOTICE.—Extra copies of the BULLETIN will be furnished at this office at the rate of *five cents* per copy. Notice of at least one week should be given when a large number is required.

NATIONAL BOARD OF HEALTH rooms are at 1410 G street, northwest.

VOL. 3.] WASHINGTON, D. C., SATURDAY, AUGUST 27, 1881. [No. 9.

SKETCH OF THE HISTORY OF QUARANTINE AT PENSACOLA, FLA.

[BY R. B. S. HARGIS.]

No records can be found relating to the establishment of quarantine at Pensacola previous to 1853, and tradition is silent. But the history of yellow fever in Pensacola and places adjacent on Pensacola Bay begets the inference that no preventive measures against the introduction of any exotic malady were ever adopted at any place situated on its borders until after the introduction of yellow fever at the navy-yard in 1853. During that memorable year, yellow fever was widely spread along the Gulf coast, and in the interior of the contiguous country. About the 2d of July the schooner *Elizabeth* from New Orleans arrived at the navy-yard with recruits for the Navy; on the 8th yellow fever broke out among these recruits, and five of them were sent to the naval hospital. Shortly after their admission several of the nurses contracted the disease, but the infection did not extend beyond the walls of the hospital.

The United States steamer *Vixen*, one of the Gulf squadron, from Tampico, steamed into the harbor on the 24th of July, and came to anchor at the navy-yard wharf. From this vessel, a few days after her arrival, yellow fever was introduced into the navy-yard and prevailed there and at Fort Barrancas and in the adjacent villages with great mortality until October.

As soon as the existence of yellow fever at the navy-yard was made known to the city authorities, and this was done immediately on the occurrence of the first cases on the schooner *Elizabeth*, quarantine was established,* and all vessels coming into the harbor from infected ports were prohibited from pratique for as long a time as the quarantine physician deemed necessary. The writer had the honor of being appointed quarantine physician and inspector, and was very rigid in the enforcement of the rules and regulations as prescribed by the board of health. The quarantine station was located at Navy Cove, on the opposite side of the bay, six miles distant from the city. Near the shore were deep water and safe anchorage. At the same time the quarantine was established, a sanitary cordon was decreed between the navy-yard and Pensacola. Guards were posted at convenient distances so as to command all the approaches to the city, whether by roads or paths, or by water. The schooners *Diamond*, *Ella*, *Martha*, and *Elizabeth*, all from New Orleans, where yellow fever was prevailing, constituted the whole number that entered the port before the disease was introduced into the city. The crews of the *Martha* and *Elizabeth* escaped the infection by the protection they enjoyed from having had the disease. Several cases occurred on the *Diamond*, of which two died; the captain, Mc———, was the last to take it, and he recovered. The *Diamond* will be referred to again further along. While the epidemic continued to rage at the navy-yard and adjacent villages, about the 1st of August Pensacola continued in the state of its wonted salubrity until a gentleman of high standing in the community, entertaining a belief in the noncommunicability and intransmissibility of the disease, provided himself with a boat and fishing tackle and went, accompanied by his son, about thirteen years of age, to Grand Bayou in the vicinity of the villages near the navy-yard, ostensibly to fish. He was allowed to pass the guards at the bridges, and by a strange fatality seized the opportunity to visit the village of Warrington on business; remained there until night. Two days afterwards he and his son were stricken down with yellow fever in this city, and three days subsequently both died almost simultaneously with black vomit. Scarcely a day after the interment of these two cases Mrs. ———, residing just opposite the residence of the late victims, was taken down with the same pestilential scourge and died on the fourth day of her illness. Other cases in the family occurred in quick succession. From this house the disease extended to the next, and thence proceeded from house to house and from street to street until it became epidemic throughout the whole of the city.

The last death in Pensacola by the scourge was chronicled about the 1st of November. As soon as the yellow fever invaded Pensacola quarantine was virtually abandoned; Captain Mc———, however, of schooner *Diamond*, was still ill of the fever, and I continued my visits until his recovery; the *Diamond* being released from quarantine and having freight for Milton and Bagdad, weighed anchor and proceeded to her destination. The town of Milton is situated on the west bank of Blackwater River, about two miles from its debouchure into Blackwater Bay, which is simply an arm of Pensacola Bay stretching northward from the eastern extremity of the latter. Bagdad is situated a mile below and south of Milton. Both these places were as healthy as usual. It was about the 16th of August when the *Diamond* reached Milton and moored at the wharf. No apprehension seemed to have been felt by the citizens regarding the introduction of yellow fever by this vessel. She proceeded to discharge freight. Two young men, brothers, Cobb by name, were employed to superintend the delivery of the cargo: in less than forty-eight hours they were taken with yellow fever, and both died with black vomit in a few days. Other cases in the mean time occurred near the wharf, and in less than a fortnight a fearful epidemic raged throughout the town. The *Diamond*, meanwhile, having delivered all the freight she had for Milton, dropped down to Bagdad, and while discharging cargo there introduced the disease. It began its ravages in a house nearest the vessel, and soon afterwards the whole village was involved in its desolating visitation; scarcely a house escaped without one or more cases. During the prevalence of the malady at Milton and Bagdad the disease was transported to Hunt's Mills, situated about one mile below Bagdad, on the east bank of the Blackwater River at or near its confluence with Blackwater Bay. The mortality here was quite inconsiderable compared with the neighboring places above mentioned. Mr. W. L. Criglar, one of the owners of Hunt's Mills, believes that the fever was introduced into that place by the schooner *Ella*, from New Orleans; at any rate, that the *Ella* was the source of two or more *foci* there can be no doubt. * * *

In consequence of the want of hospital accommodations for the seamen during the epidemic of the preceding year, early in 1854, through the agency of the collector of customs, the establishment of a marine hospital was authorized by the proper department at Washington, and the writer was appointed to take charge of the institution. The building was commodious and well suited for the purpose; it was situated one mile from the city, immediately on the bay, and convenient to the shipping. * * * About the first of August the brig *Alfred Exall* arrived from Havana: several of her crew had died on the passage, and the captain, Joseph Golder, was the only one on board suffering from the disease; he was admitted to the hospital. Against his admission I entered a protest addressed to the collector of customs, and begged that some isolated and convenient place might be obtained for such cases, but it was not regarded, and the captain was ordered to the hospital in a critical condition. Believing from my observations of the preceding year that yellow fever was communicable, I received Golder at the threshold, had him brought into the vestibule, and there ordered him stripped of his clothing, bathed, reclad in comfortable clothing, and carried up to a large airy room in the third story of the house. None of the wards in the second story were occupied, but a small room at the end of the hall above the vestibule of the basement story was held by the mate of a vessel then receiving cargo at Milton. He was a convalescent, and was to have been discharged in a few days. Golder was so perfectly secluded, and the rules so strenuously enforced, that no apprehensions were felt of the disease extending beyond the walls of the sick-room; the nurse was not permitted to communicate in any way with any of the inmates or employés of the hospital. Unfortunately, however, in spite of our rules and regulations, two of the inmates, one of whom was the convalescent mentioned above, visited the sick-room, and both contracted the disease and fell victims to their temerity and disobedience within three days of their attack. The hospital was immediately broken up and all the sick transferred to another building situated about one hundred yards distant from the hospital. No other cases occurred. Several vessels subsequently arrived in port infected with yellow fever, but none of the cases were admitted to the hospital the remainder of that season.

In 1855 two vessels came in the harbor with yellow fever, and as I was the only physician that practiced among the shipping in the harbor, fearing the intrusion of the malady to the hospital, advised treatment on board. One of the vessels, the *Alexander*, from Cardiff, that had not touched at any intermediate port, came in with a clean bill of health, but no sooner was her hatches and ports thrown open than several cases occurred among the crew and two of the stevedoros. I stopped the work and disinfected every part of the vessel; afterwards no other cases occurred. This vessel had brought the *materies morbi* in her hold, where it was generated while traversing the calm belt of the tropical Atlantic. She had never been south of

*The establishment of quarantine this year, was the first of which we can find any record, and was done under, and in accord with, an act of the legislature of Florida which passed the senate December 23, 1852, and the house of representatives December 29, 1852, and approved by the governor January 8, 1853.

32° north latitude before; she was extremely filthy, and leaked but little, not sufficient to require the use of the pump. "A very leaky vessel is always a healthy vessel." There was no sickness in the city of an infectious nature; indeed it was singularly healthy. The captain got angry and raved like a madman and swore that the sickness came by the winds from the shore, two miles distant. In 1858 several infected vessels anchored off the city in the bay; amongst them were the barks *R. B. Walker*, *Chase*, and *Analita*. The cases were so numerous that we were compelled to admit them into the hospital. I, however, remonstrated with the collector against it, but he said he was compelled to furnish hospital relief for them, and was not authorized by the department to provide any other quarters for accommodation of the sick. The result of their admission was disastrous to the sick in the hospital; several contracted the disease and some of them died with black vomit."* In 1859 Dr. G. O. Bromahan was appointed to take charge of a *quasi* quarantine and boarded the vessels from the city. A few vessels came in with yellow fever, but no case was sent to the hospital; they were all treated on board. The doctor kept no record of the number or names of the infected vessels, nor number of cases; consequently here, as will again appear in this paper, a hiatus obtains in the history of quarantine at Pensacola.

In 1860 Dr. Thomas Eastin had the position of quarantine physician and inspector; he met an untimely death by drowning near the station. He had no successor that year, and quarantine was virtually abandoned the remainder of the season. No record relating to the service of Dr. Eastin can be found.

Pensacola and the navy yard and military posts contiguous were evacuated by the Confederates in March, 1862. Only a few families, old residents, remained in Pensacola. The Federals took possession and occupied the navy yard and its dependencies on ——, 1862, and held it until the close of the war.

It appears from the statement of Dr. B. F. Gibbs, surgeon, U. S. N., in an article published in the American Journal of Medical Sciences, vol. li, page 341, that a quarantine was in operation at Pensacola navy yard in 1863, and which had been instituted early after its occupation on the first ———— by the Federal Army and Navy. The navy-yard and military posts and adjacent villages and vessels contiguous to the yard were free from any spreading disease during the summer of 1863 until two weeks after the arrival (about the 10th of August) of the United States storeship *Relief* from Ship Island, a perfectly healthy locality, where she had been used as a storeship for the previous thirteen months. This vessel, shortly after passing quarantine and reporting all well to the health officer, became the locality of an epidemic which proved to be yellow fever in a very malignant and intractable form. Seventeen of the worst cases were sent to the naval hospital and the ship ordered to the quarantine station, six miles distant from the navy-yard. The scene of this epidemic at Pensacola, Fla., was under the most complete military control. "No ships entered the harbor of Pensacola or moved while in the harbor, neither did individuals pass from point to point without the knowledge of the military or naval authorities. For this reason the history of all those cases which might have been considered isolated was easily obtained, and also whether any connection could be traced from them to the point of infection, or whether intercourse existed between the latter and those neighborhoods which were healthy.

But the disease spread to the boom flotilla and other vessels lying adjacent to the yard, and subsequently the malady invaded the navy-yard, but did not extend to the army encamped one and a half miles distant.

Simultaneously with the appearance of the epidemic at Pensacola (August 25), a similar malady invaded the frigate *Colorado* forty miles distant, on the blockade of Mobile. Seven or eight of the cases died, as I have been informed, of about forty infected. They were unable to trace the disease to any other source than the probable fomites, with cryptogamia or germs contained in stores received on board, coming from the *Relief* previous to her departure from Ship Island.

"From the above history," says Dr. Gibbs, "of the commencement of the malady, there can seem little doubt that the disease was generated in the *Relief*. Perhaps it is too positive to point to this locality as anything more than affording proper conditions for generating this poison, or fostering the germs in the same manner as certain protophytes only multiply, when lodged on proper soil, as the germ of *Isaria felina* upon the dung of cats, *Puccinia rosa* upon rose-bushes, &c. In the *Relief* we must have had, first, the germ; second, we had the subjects susceptible to its influence; and, third, we most certainly had in the hold of the ship conditions necessary for fostering the germ. This deserves attention as an important point in naval hygiene."

To the filthy condition of the *Relief* we trace the origin and initial point of the pestilence. Whether it was reared in her without the deposit of a germ is not of so much practical importance as to fully understand the fact that the nidus existed in her to nourish the fatal malady. "I conclude," says Dr. Gibbs further on, "that yellow fever may originate in a ship when we have heat continued for two weeks at 90° Fahrenheit, and the hold of the ship is filthy"† in which he is right. I shall refer to these remarks in the sequel. One case occurred in Pensacola that could not have had any communication with territory of the epidemic. It was ascertained subsequently that this case contracted the disease from sleeping upon some sails that had been purchased by the father of the patient at a sale of the rigging of an infected ship. This fact is mentioned by Harvey E. Brown, assistant surgeon, U. S. N., in his report to the Secretary of the Navy, 1872.

[To be continued.]

* New Orleans Med. News and Hospital Gazette, 1860.

† Account of the epidemic of yellow fever which visited Pensacola navy-yard in the summer and autumn of 1863. By B. F. Gibbs, M. D., Surgeon, U. S. N., American Journal of Medical Sciences (new series), p. 340 (vol. 51).

ABSTRACTS FROM REPORTS OF STATE AND LOCAL BOARDS OF HEALTH FOR JULY.

STATE BOARD OF HEALTH OF CALIFORNIA.

The report of the State board of health of California embraces reports from 22 cities and towns in the State having an aggregate population of 334,239. The total number of deaths that occurred during the month was 389, being at the rate of 13.92 per 1,000 per annum.

The following table exhibits the principal causes of death and their distribution in different sections of the State:

	Population.	Total deaths.	Annual rate per 1,000.	Consumption.	Acute lung diseases.	Diphtheria.	Croup.	Diarrhœa and dysentery.	Cholera infantum.	Typhoid fever.	Malarial fevers.	Whooping-cough.	Small-pox.
Coast cities	251,343	297	14.04	36	20	4	1	3	10	7	0	2	2
Coast valleys	25,685	28	13.08	6	0	0	0	1	4	1	0	0	0
Interior valleys	53,611	58	12.96	8	2	1	0	1	6	3	1	0	0
Mountains	3,600	6	19.92	0	1	0	0	0	2	0	0	0	0
	334,239	389	13.92	50	23	4	1	5	22	11	1	2	2

The table shows the usual large mortality from diarrhœal diseases incident to the hot season. In addition to the number reported above there were 26 deaths from other diseases of the stomach and bowels. The reports of "prevalent sickness" make prominent mention of these diseases. There has been a decrease in the prevalence of acute lung diseases, only three deaths being attributed to these diseases outside of San Francisco. Typhoid fever is represented by 11 deaths, while no mortality is reported from intermittent or remittent fevers.

The sanitary condition of the State, so far as the limited number of localities heard from will justify an opinion, continues remarkably good. Notwithstanding the persistence of warm weather throughout the interior of the State the death rate from 21 localities outside of San Francisco was only 12.36 per 1,000 per annum, while, including the metropolis, it was only 13.92. So far as known, no cases of sunstroke have occurred among laborers in the harvest fields, even under a temperature ranging as high as 100° Fahr., or upwards, in the shade. This conservative influence of the climate is dwelt upon particularly in contrast with the climate of many portions of the East, where so much suffering and such great mortality occurred during July at even a lower temperature than prevailed at times during the month in portions of California.

LOCAL BOARDS.

Chicago, Ills.—The report of Dr. M. K. Gleason, registrar of vital statistics, states that the total number of deaths during the month of July was 1,786, or at the rate of 27.00 per 1,000 per annum of the population. A marked increase in the mortality is observed when compared with that for the corresponding periods in the years 1879 and 1880. During the month of July, 1879, the number of deaths reported was 1,024, and in July, 1880, the number was 1,342. The principal causes of death are reported as follows: Phthisis pulmonalis, 85; acute lung diseases, 87; small-pox, 50; measles, 16; scarlatina, 19; diphtheria, 21; croup, 16; whooping-cough, 15; typhoid fever, 23; cerebro-spinal fever, 26; malarial fever, 7; diarrhœal diseases, 642; other zymotic diseases, 73.

The number of deaths of children under five years of age during the month was 1,269. Of this number 805 were under 1 year, and 265 between the ages of 1 and 2 years.

Detroit, Mich.—Louis Dillman, city clerk, furnishes mortality report of the city for July, from which it appears that the total number of deaths was 355. The principal causes of death were: Cholera infantum, 100; cholera morbus, 8; congestion of the brain, 13; consumption, 17; convulsions, 33; dysentery, 13; diphtheria, 9; gastritis, 6; heart disease, 13; malarial fever, 7; typhoid fever, 8; remittent fever, 2; scarlet fever, 17; meningitis, 7; peritonitis, 1; pneumonia, 9; small-pox, 1; and from sunstrokes, 2.

The number of deaths under 5 years was 237. Of this number 161 were under 1 year.

DUNKIRK, N. Y.—The mortality report for July, received from Dr. Charles C. Curtis, health officer, gives a total of 14 deaths during the month, in a population of 7,000. Four of the decedents were under 5 years of age. The principal causes of death were, diphtheria, 2; cerebro-spinal meningitis, 1; and from phthisis pulmonalis, 1.

HUDSON COUNTY, N. J.—C. J. Rooney, jr., clerk board of health and vital statistics, states in his report for July, that the total number of deaths in Hudson County during the month was 582, being at the rate of 36 per 1,000 per annum. In Jersey City the annual death rate was 33.5; in Hoboken, 46.9, and in the remaining portions of the county the annual rate was 36.2. The principal causes of death reported were, consumption, 50; pneumonia, 19; congestion of the lungs, 4; diphtheria, 16; typhoid fever, 3; malarial fever, 8; scarlet fever, 15; measles, 4; cerebro-spinal meningitis, 3; croup, 5; diarrhœal diseases, 13; small-pox, 6; and whooping-cough, 2.

Deaths under 5 years, 344. Of this number 258 were under 1 year.

The annual death rate for the entire county was 3.8 per 1,000 above the average for the corresponding periods during the past five years. This increase was largely due to an increased mortality among children. Diseases of the nervous system are also reported as having contributed notably to the increased mortality for July.

KEOKUK, IOWA.—Dr. D. B. Hillis, president of the board of health, reports the occurrence of 20 deaths during the month of July. Population, 12,125. Annual death rate per 1,000, 19.7. Among the deaths reported there were, from consumption, 4; diarrhœal diseases, 5; croup, 1; brain fever, 1; and sunstroke, 1. Of the total number of deaths reported, 9 were of children under 5 years of age.

KNOXVILLE, TENN.—Dr. S. B. Boyd, secretary, transmits the mortality report for July. Total number of deaths reported, 30; whites 20, colored, 10. The white population numbers 16,000, and the colored population 6,000. The annual death rate, per 1,000, for the entire population, was 23.50; that for the white population, 24.00, and for the colored, 20.00. The principal causes of death were as follows: Meningitis, w. 2; cholera infantum, w. 3, c. 1; consumption, w. 2, c. 1; typhoid fever, w. 1, c. 1; heart disease, w. 2; peritonitis, w. 2, c. 1. Deaths under 5 years, whites, 8, colored, 5.

MERIDEN, CONN.—The mortality report for July, forwarded by S. A. Hull, registrar, states that the total number of deaths during the month was 26, of which number there were, from cholera infantum, 15; phthisis pulmonalis, 5; dysentery, 1; and heart disease, 1. The number of deaths under 5 years is not given.

MINNEAPOLIS, MINN.—Dr. A. H. Salisbury, health officer, reports a total of 128 deaths during the month of July. Annual death rate per 1,000, 30.72.

The principal causes of death were, cerebro-spinal fever, 6; cholera infantum, 30; croup, 1; typhoid fever, 5; diphtheria, 4; diarrhœa, 9; dysentery, 3; cholera morbus, 1; entero-colitis, 4; measles, 3; variola, 1; consumption, 10; cerebritis, 4; sunstroke, 1; convulsions, 3; and pneumonia, 7.

As compared with the corresponding periods of 1879 and 1880, the mortality during the period embraced in the report shows a marked increase, the number of deaths reported during July, 1879, being 96, and in July, 1880, 94. This increase is to be attributed to the unusual mortality among children, the number of deaths under 5 years being 78.

NASHVILLE, TENN.—Dr. Richard Cheatham, health officer and registrar, furnishes the mortality report for July, showing a total of 110 deaths during the month: 63 white and 47 colored. The total population, estimated for the middle of the year 1881, is placed at 43,000: white, 27,770; colored, 15,230. Annual death rate per 1,000 for the white population, 24.46; for the colored, 36.66; and for the entire population, 30.80. The number of deaths from zymotic diseases was 38; from constitutional, 25; from local diseases, 25; developmental, 10; violence, 4. Eight deaths occurred in which the cause is reported as unknown. The principal causes of death are stated as follows: Phthisis pulmonalis, 15: w. 11, c. 4. Cholera infantum, 18: w. 13, c. 5. Entero-colitis, 5: w. 3, c. 2. Typhoid fever, 3: w. 1, c. 2. Acute lung diseases, 4: w. 2, c. 2.

The total number of deaths under five years was 54: w. 31, c. 23. The mortality during the month of July compares favorably with that for the corresponding periods since 1875, except for July, 1878, when the annual rate per 1,000 was 27.02. In July, 1876, the annual rate of mortality reached the highest point, 42.22, and in July, 1879, it fell to 33.67, that being the lowest rate reached in the month of July prior to July of the present year, when, as stated above, it was 30.80 per 1,000.

NEW LONDON, CONN.—Isaac W. Thompson forwards the report for July. The total number of deaths during the month was 18. Deaths under 5 years, 5.

The causes of death are reported in five cases as follows: Cerebro-spinal meningitis, 1; phthisis pulmonalis, 1; diphtheria, 2; and congestion of the lungs, 1.

The population is stated as 10,529, showing an annual death rate of 20.51 per 1,000.

NORFOLK, VA.—The report of Dr. James D. Galt, health officer, states that the total number of deaths during the month of July was 88: whites 38, colored 50. Total population, estimated at 26,200, white 14,900, colored 11,300, giving an annual death rate of 30 60 for the white population, 53.09 for the colored, and for the entire population, 40.31.

The principal causes of death were: Diphtheria, w. 2, c. 3: diarrhœa, w. 1, c. 4; dysentery, w. 2, c. 2; cholera infantum, w. 7, c. 12: malarial fevers, w. 3, c. 2; phthisis pulmonalis, w. 1, c. 5; convulsions, c. 3: general debility and inanition, w. 4, c. 4: congestion of the brain, w. 2: whooping-cough, w. 1, c. 3. The total number of deaths among children under 5 years of age was 59: w. 23, c. 36.

PATERSON, N. J.—The mortality report for July, received from George Boyd, registrar of vital statistics, shows a total of 159 deaths during the month. The population is estimated at 50,950, giving an annual death rate of 37.45 per 1,000. As compared with July, 1880, this report shows an increase of 35 deaths. The principal causes of death are given as follows: Cholera infantum, 57; diarrhœal diseases, 6; consumption, 12; heart diseases, 5; diseases of the digestive organs, 5. The total number of deaths under 5 years was 97.

PETERSBURG, VA.—Dr. E. W. Gordon, president of the board of health, furnishes the mortality report for the month of July. The total number of deaths during the month was 59; of which number 29 were white and 30 colored. The annual death-rate for the entire population, per 1,000, was 32.18; of the white population 31.80, and of the colored, 30.00. Principal causes of death: Scarlatina, c. 1; cholera infantum, c. 2; diphtheria, w. 1; whooping-cough, c. 2; phthisis pulmonalis, w. 3, c. 5; meningitis, w. 2. The total number of deaths among children under 5 years of age was 29; w. 13, c. 16.

PROVIDENCE, R. I.—Dr. Edwin M. Snow, superintendent of health and city registrar, reports that 196 deaths occurred in Providence during the month of July, 1881. The population, by the United States census of 1880, was 104,857. It is now estimated at 106,000, and upon this basis the annual death-rate per 1,000, during July, was 22.19. The principal causes of death were: Cholera infantum, 43; consumption, 26; convulsions, 4; croup, 2; diarrhœa, 9; dysentery, 7; enteritis, 7; typhoid fever, 3; diseases of the heart, 11; whooping-cough, 5; measles, 8; cerebro-spinal meningitis, 1; pneumonia, 2; scarlatina, 4. Of the total number of decedents, 109, or 55.61 per cent., were under 5 years of age.

SAINT PAUL, MINN.—The report for July received from C. A. Wheaton, jr., health officer, shows a total of 139 deaths, being a marked increase when compared with the number that occurred during the corresponding periods in the years 1879 and 1880, as follows: 1879, 80; 1880, 112. The annual death-rate per 1,000, during July of the present year, based upon the United States census, was 39.95. The following were among the principal causes of death: Cholera infantum, 49; cholera morbus, 3; consumption, 7; convulsions, 4; diphtheria, 6; measles, 2; pneumonia, 3. Total number of deaths under 5 years, 98, of which number 70 were under 1 year.

SCRANTON, PA.—The report of the health department for July shows a total of 32 deaths from all causes. Of the decedents 17 were under 5 years of age. The principal causes of death were: Scarlatina, 2; diarrhœal diseases, 16; phthisis pulmonalis, 1; pneumonia, 1; heart diseases, 3.

SENECA FALLS, N. Y.—Dr. H. J. Purdy reports 4 deaths during the month of July, as follows: From accident, 1; phthisis pulmonalis, 1; scarlet fever, 1. No deaths under 5 years of age are reported.

SHELBY COUNTY, TENN.—The report of the board of health of the taxing district of Shelby County for July gives a total of 110 deaths during the month, being two more than occurred during the corresponding period in 1880, and a decrease of 70 as compared with the deaths reported during July, 1879. Of the decedents 50 were white and 60 colored. The principal causes of death were: Diphtheria, 3; intermittent fever, 1; typhoid fever, 2; congestive fever, 3; typho-malarial fever, 1; malarial fever, 4; dysentery, 12; consumption, 8; meningitis, 6; sunstroke, 3; cholera infantum, 3; dentition, 15. Total number of deaths under 5 years, 56.

WILMINGTON, DEL.—Dr. E. B. Frazer, register, reports a total of 161 deaths during the month of July, 118 white and 43 colored, being an increase of 58 as compared with the corresponding period of 1880. The principal causes of death are reported as follows: Bronchitis, acute, 2; convulsions, 5; consumption, 19; cholera infantum, 29; diphtheria, 1; diarrhœa, 2; enteritis, 3; heart disease, 6; membranous croup, 2; meningitis, 8; marasmus, 9; scarlatina, 3; small-pox, 25. Total deaths under 5 years, 83.

REPORT OF MORTALITY IN CITIES OF THE UNITED STATES FOR THE WEEK ENDING AUGUST 13, 1881.

ERRATA.

Attention having been called to certain errors in the report of Dr. Sternberg, entitled "Experiments with Disinfectants," as published in BULLETIN No. 4, July 23, 1881, the following corrections are made:

Page 21, first column, 16th line, for "50" read "5."

Page 21, second column, 11th line, insert the words "virulence of," so that the sentence will read: "Destroy the virulence of the infected material."

Page 22, first column, 23d line, insert the words "blood from," making the sentence read, "a small quantity of blood from one of them."

Page 22, first column, 13th line from bottom, erase period after the word "negative," and substitute small "a" for capital "A" in the following word.

Page 22, first column, 3d line from bottom, for "connection," read "connective."

Page 22, second column, last line, inclose last word, "disinfection," in brackets.

RAILROAD INSPECTION.

At the request of the State board of health of Tennessee, the following inspectors of railroads have been appointed at New Orleans:

For the Chicago, Saint Louis and New Orleans Railroad, Dr. L. F. Salomon; for the Louisville and Nashville Railroad, Dr. J. M. Watkins.

It is proper to state that the reports received at this office give every assurance that the city is entirely free from yellow fever, but in view of its exposed position and intimate commercial relations with infected ports the companies controlling the above-named roads have not only consented to the sanitary inspection of their trains, but also to pay the salaries of the inspectors, for the purpose of giving the greatest possible feeling of security to the people of the Mississippi Valley.

HAVANA, CUBA.—Advices received from Havana state that there were 27 deaths from yellow fever during the week ending August 13. Of this number 16 were among the resident population, and 11 were in the army and navy.

The fever is increasing in the city, the total number of cases at present within the city limits being not far from 200. Small-pox has decreased since the last report, five deaths only having occurred from this disease during the past week.

CHEMICAL EXAMINATION OF DRINKING WATER.

[REQUEST FOR SPECIMENS OF SUSPECTED WATER.]

A careful study of the chief methods in use for the chemical examination of potable water, so far as organic matter is concerned, has been undertaken by order of the National Board of Health. It is particularly requested of the correspondents of the board, of medical men throughout the country, and of others interested in sanitary matters, that any well-marked case of disease which may seem on medical grounds fairly attributable to organic impurities in drinking water be promptly reported to Dr. J. W. Mallet, University of Virginia Post-office, Albemarle County, Virginia, with a few lines stating clearly the medical nature of the case, and the character of the evidence on which the water in question is suspected of having actually caused disease in persons who have used it.

It is further desired that a sample of each such water be forwarded for examination, *but not until notice has been received from Dr. Mallet that the analysts are ready to proceed with it*, since it is important that no useless delay should occur between the shipping of the sample and its investigation in the laboratory. In notifying any one who may be able to furnish specimens of suspected waters that may be forwarded, clear instructions will be sent as to the quantity of water required, and the mode of collecting, packing, and shipping it.

It is particularly desired that no case be presented on doubtful or vague evidence, since one important object of the inquiry demands that all such be rejected, and only those cases examined which involve the strongest grounds for believing that mischief has really been caused by organically foul drinking water.

The cost of packages and transportation for samples will be borne by the Board of Health.

NATIONAL BOARD OF HEALTH rooms are at 1410 G street, northwest.

JOHN S. BILLINGS, M. D., U. S. A., 84 Gay st., Georgetown, D. C.
JAMES L. CABELL, M. D., &c., University of Virginia, Va.
CHARLES F. FOLSOM, M. D., 113 Boylston st., Boston, Mass.
HOSMER A. JOHNSON, M. D., &c., 4 W. Sixteenth st., Chicago, Ill.
ROBERT W. MITCHELL, M. D., &c., 34 Madison st., Memphis, Tenn.
SAM'L F. PHILLIPS, Esq., Solicitor Gen'l. 1119 K st., Washington, D. C.
STEPHEN SMITH, M. D., &c., 31 West Forty-second st., New York.
THOS. J. TURNER, M. D., U. S. N., 1227 M st., Washington, D. C.
TULLIO S. VERDI, M. D., &c., 815 14th st., N. W., Washington, D. C.

NOTICE.—In filling the reports on the postal cards for cities and hospitals, the figures are frequently so placed between the lines as to leave the disease intended entirely uncertain, except in cases where the judgment of the compiler may enable him to determine which is meant. This may be avoided by a stroke of the pen after the disease to be recorded. The *total* numbers should be placed in their proper columns, and no figures placed immediately after the word *total* will be noted in the tables. Those who report *still-births* will please note them separately, as they are not included in the tables of mortality in the BULLETIN.

NOTICE.—Extra copies of the BULLETIN will be furnished at this office at the rate of *five cents* per copy. Notice of at least one week should be given when a large number is required.

MORTALITY IN FOREIGN CITIES, COMPILED FROM WEEKLY CONSULAR REPORTS TO NATIONAL BOARD OF HEALTH.

Countries.	Places.	Population.	Week ending—	Total deaths.	Annual rate per 1,000.	Cholera.		Yellow fever.		Small-pox.		Typhoid fever.		Typhus fever.		Other contagious diseases.		Weekly mean thermometer.

National Board of Health

BULLETIN.

VOL. 3.] WASHINGTON, D. C., SATURDAY, SEPTEMBER 3, 1881. [No. 10.

PROPOSED SANITARY LEGISLATION IN NEW HAMPSHIRE.

AN ACT to establish a State board of health.

Be it enacted by the senate and house of representatives in general court convened:

SECTION 1. The governor, with the advice and consent of the council, shall appoint four persons, three of whom shall always be physicians and one a civil engineer, who, with the governor and attorney-general of the State, shall constitute a State board of health. Of the four persons first appointed, two shall serve for two years and two for four years from the time of their appointment; and the governor shall thereafter, in the same manner, biennially appoint two persons to be members of the board, to hold their offices for four years; and all vacancies shall be filled in the same manner for the unexpired term.

SEC. 2. The board thus formed shall meet in the State-house at least once in every three months; and three members shall constitute a quorum for business. They shall organize by electing one of their number president, and shall appoint a suitable person, who shall be a physician and may be a member of the board, to be their permanent secretary and executive officer, who shall hold his office at the pleasure of the board, so long as he shall faithfully discharge the duties thereof. They shall institute the necessary rules to govern the organization, and establish the amount of salary that the secretary shall receive; and no member of this board shall receive any compensation for services except the secretary, save that the actual expenses incurred while engaged in the duties of the board, which shall be rendered in an itemized account, after being approved by the finance committee of the board and the State treasurer, shall be paid out of an appropriation made for its support. The salary of the secretary shall be paid quarterly, in the same manner, from the same appropriation.

SEC. 3. The governor and council shall designate a room in the State-house, suitably appointed, as a place for the board to hold their meetings, and to be used as an office for the secretary of the board. This room shall be kept open for the benefit of the public, the same as the other public offices of the State; and information pertaining to the sanitary condition of the State, or any suggestions or regulations necessary to guard against epidemic or contagious disease, shall be furnished from this office to citizens, or to town or county authorities, without expense; and the board shall also take cognizance of the sanitary condition of all public buildings, hospitals, and grounds within the State, that are now occupied as penal institutions, alms-houses, or reformatory institutions, whether State or county, without other remuneration than such as is provided for in section two of this act.

SEC. 4. The board shall take charge of the vital statistics of the State, and enforce the provisions of chapter 181 of the general laws.

SEC. 5. The board, shall, whenever directed by the governor and council, assist selectmen to enforce the provisions of chapter 116 of the general laws, with compensation as provided in section two of this act.

SEC. 6. The board shall take cognizance of the interests of health and life among the people of the State, making sanitary investigations, and advising and assisting local boards of health in conducting special investigations into the causes of epidemics and the sources of mortality, and they shall collect such information in respect to these matters as may be useful to the people of the State, and report the same, through the governor and council, in the same manner as other State officials are now required to do.

SEC. 7. The report to the governor and council shall also contain a detailed statement of the expenses of the board, including the salary and expenses of the secretary; but the total amount paid for the expenses of the board shall not exceed three thousand dollars in any one year, which amount is hereby annually appropriated for this purpose, to be paid by the State treasurer as specified in section two of this act.

SEC. 8. This act shall take effect from the date of its passage, and all other acts or parts of acts inconsistent with this act are hereby repealed.

SANDY HILL, NEW YORK.—Dr. G. M. Ingalsby reports, under date of August 26, the organization of a board of health, under the law passed at the last session of the State legislature, and that the authorities are actively engaged in the work of improving the sanitary condition of the village.

REPORTS OF LOCAL BOARDS OF HEALTH.

NEW YORK CITY.

Second quarter, 1881.

Dr. John T. Nagle, deputy register, furnishes the following report of the mortality in New York City during the quarter ending June 30, last:

The total number of deaths that occurred in the city of New York during the three months ending June 30, 1881, was 9,515, being an excess of 395 as compared with the number registered during the preceding three months, and 883 in excess of the number of deaths reported during the corresponding quarter of 1880. The annual death-rate during the three months ending June 30, 1881, was 30.67 per 1,000.

The number of deaths registered during the second quarter of the years 1880 and 1881, and the principal causes of death, are given in the following table:

Causes of death.	1880.	1881.
Total deaths from all causes	8,632	9,515
Total zymotic diseases	2,580	3,203
Total constitutional diseases	1,726	1,955
Total local diseases	3,384	3,543
Total developmental diseases	510	476
Deaths by violence	432	328
Small-pox	2	196
Measles	164	191
Scarlatina	114	518
Diphtheria	218	563
Membranous croup	175	270
Whooping-cough	68	46
Typhus fever	1	105
Typhoid fever	42	86
Puerperal diseases	133	94
Diarrhœal diseases of children under five years of age	1,261	537
Diarrhœal diseases of all ages	1,349	604
Alcoholism	54	52
Cancer	172	194
Phthisis pulmonalis	1,110	1,291
Bronchitis	371	372
Pneumonia	878	851
Heart disease	292	360
Marasmus—tabes mesenterica and scrofula	170	184
Hydrocephalus and tubercular meningitis	176	202
Meningitis and encephalitis	188	236
Convulsions	218	194
Direct effect of solar heat	58	10
Apoplexy	145	148
All diseases of the brain and nervous system	709	863
Bright's disease and nephritis	377	444
Deaths by suicide	56	46
Deaths by drowning	91	69
Deaths in institutions	1,538	2,025
Deaths of persons seventy years old and over	518	566
Deaths of children under one year of age	2,718	2,960
Deaths of children under two years of age	3,556	2,937
Deaths of children under five years of age	4,195	4,118

The increase in the number of deaths during the second quarter of this year as compared with the corresponding period of last year was from the following causes, viz: Scarlatina 404, diphtheria 345, small-pox 194, phthisis pulmonalis 181, diseases of the brain and nervous system 154, typhus fever 104, membranous croup 95, diseases of the heart 68, Bright's disease 67, meningitis and encephalitis 48, typhoid fever 44, measles and pneumonia 27 each, hydrocephalus 26, cancer 22, marasmus and scrofula 14, apoplexy 3, and bronchitis 1. The decrease of 745 deaths from diarrhœal diseases and 48 from sunstroke during the second quarter of this year compared with the number of deaths from those causes during the corresponding quarter of the year 1880 is noticeable, particularly as the mean temperature for the second quarter of this year was 5.77 degrees lower than that of last year. There was also a decrease in the number of deaths from following causes, viz: Whooping-cough 22 deaths, puerperal diseases 39, alcoholism 2, pneumonia 27, convulsions 24, and drowning 22.

There was an increase of 487 deaths in institutions, 419 in tenement houses (houses containing four families and over), and 115 in houses which contained less than four families, during the second quarter of this year as compared with the corresponding quarter of last year.

The following table will show the class of dwellings where the principal increase of deaths during the second quarter of the past three years occurred, viz:

	1881.	1880.	1879.
Deaths in institutions (actual mortality)	2,025	1,538	1,149
Deaths in tenement houses (reported mortality)	5,078	4,659	3,454
Deaths in private houses (reported mortality)	2,151	2,036	1,800

The percentage of deaths reported in tenement houses to the total mortality reported for New York City during the quarter was 53.39, while the percentage of deaths in tenement houses from contagious diseases to the total mortality from the same diseases was 67.25; showing that these diseases have been more prevalent among the residents of tenement houses where the population is more densely packed than in other dwellings. The deaths from ten zymotic diseases in tenement and private houses and institutions, with the average age of those who died from each of the diseases, during the second quarter of this year, are as follows:

Cause of death.	Deaths in houses containing less than 4 families.	Deaths in houses containing more than 3 families.	Deaths in institutions.	Average age of those that died. Yrs.	Mos.	Days.
Small-pox	6	22	173	15	8	22
Measles	18	87	78	2	2	14
Scarlatina	126	364	19	4	10	19
Diphtheria	150	398	10	4	4	28
Membranous croup	61	208	6	3	0	29
Whooping-cough	20	25	4	1	5	22
Typhus fever	1	6	99	40	11	13
Typhoid fever	23	38	20	31	2	1
Cerebro-spinal fever	49	133	23	9	1	29
Malarial fevers	63	67	7	25	11	18

The meteorological conditions during the second quarter of the present year, as compared with the conditions which prevailed during the corresponding period of 1880, were as follows:

	1881.	1880.
Mean temperature	57.92	63.69
Mean height of barometer, inches	29.861	29.905
Mean humidity, saturation 100	74	66
Movement of winds, miles	5,029	4,640
Rainfall, inches	3.16	1.55

From the above statement it will be seen that during the quarter ending June last there was a decrease of 5°.77 in mean temperature, a slight decrease in atmospheric pressure, while there was an increase of 8 in relative humidity, and of 1.61 inches in the quantity of rain.

The mortality for the first and second quarters of the present year exceeded the mortality during any of the corresponding quarters of the preceding ten years, the excess as compared with the first half of last year being 3,189. The following table exhibits the total number of deaths in New York City for the first and second quarters during the past eleven years:

Years.	Estimated or consecrated population.	Deaths in first quarter.	Deaths in second quarter.	Total 6 months.
1871	954,636	6,555	6,597	13,152
1872	967,142	7,510	8,824	16,334
1873	979,811	6,967	6,605	13,572
1874	992,646	6,552	6,542	13,094
1875	1,041,886	7,842	7,064	14,906
1876	1,055,305	7,603	6,704	14,337
1877	1,069,362	6,002	6,047	12,049
1878	1,083,371	6,664	6,334	12,998
1879	1,097,563	7,576	6,606	14,182
1880	1,206,577	6,814	8,632	15,446
1881	1,242,593	9,120	9,515	18,635

The total number of cases of contagious diseases reported to the Sanitary Bureau during the three months ending June 30 was 5,784, as follows, viz: Typhus fever 437, typhoid fever 163, scarlatina 1,920, measles 1,327, diphtheria 1,336, small-pox 601. To every death from small-pox there were 3.07 cases reported; to every death from measles, 6.95 cases; to every death from scarlatina, 3.70; to every death from diphtheria, 2.37; to every death from typhus fever, 4.16; and to every death from typhoid fever, 1.89.

DISTRICT OF COLUMBIA.

July, 1881.

Dr. Smith Townshend, health officer, reports that the total number of deaths registered in the District during the month of July, 1881, was 481, being an increase of 110 as compared with the corresponding period of last year, and 11 more than the average number of deaths that have occurred in July during the past seven years.

The population of the District is estimated at 180,000; whites, 120,000; colored, 60,000. The total number of deaths among the white population was 236; annual death rate per 1,000, 23.6. The number of deaths of colored persons was 245; annual death rate per 1,000, 49. The annual death rate per 1,000 for the entire population was 32.07. Of the total number of deaths, 259, or 53.9 per cent., were under 5 years of age.

The following table exhibits the number of deaths from the principal diseases among both the white and colored population:

	White.	Colored.
Scarlet fever	1	.....
Diphtheria	1	.....
Croup	.....	1
Whooping-cough	2	.....
Typhoid fever	4	2
Malarial fever	5	6
Diarrhœal diseases	72	70
Inanition	3	14
Phthisis pulmonalis	20	45
Convulsions	9	23
Acute diseases of brain	17	7
Heart diseases	13	5
Respiratory organs	3	9
Digestive organs	11	10

The mortality during the month of July shows a marked increase as compared with that during the month immediately preceding. This increase is chiefly in deaths from diarrhœal diseases, which ranged from 67 in June to 142 in July. The deaths from phthisis pulmonalis increased from 55 to 65; deaths from diseases of the nervous system from 32 to 68; and from diseases of the circulatory organs from 6 to 18. The number of deaths from accident or negligence was 18. Of this number, 7 were caused by tetanus following injuries received from toy pistols.

Weather.—The mean temperature of the air during the month was 77°.1, being .2 higher than the mean for July, 1880. A deficiency, however, of 1°.52 is shown when compared with the average temperature for July during the past ten years. The lowest mean temperature, 74°, occured in 1871, and the highest, 81°.7, in 1872. The highest temperature during the month, 97°.6, occured on the 13th, and the lowest, 61°.6, on the 23d. Greatest daily range of temperature, 27°.1, July 3, and the least, 11°.1, on the 30th. The mean daily range of temperature was 19°.5. Prevailing direction of wind, N. W. The mean reading of the barometer for the month was 29.97 inches. On July 30 the mean reading was 30.23 inches, that being the highest for the month; the lowest, 29.75, occured on the 23d. Monthly range, 0.554. *Precipitation.*—The quantity of rain which fell during the month was 1.67 inches, being .52 of an inch less than in July, 1880, and 2.54 inches less than average for the corresponding period during the past ten years; the average rainfall for July during that period being 4.21 inches.

MILWAUKEE, WIS.

July, 1881.

The mortality report for July, forwarded by Dr. O. W. Wight, commissioner of health, shows that there were 279 deaths registered in the city of Milwaukee during the month of July. Estimated population, 115,761; annual death rate per 1,000, 28.9.

The mortality during July, of this year, exceeded that of July, 1880, by 31, and was 33 in excess of the average for the corresponding period during the past three years. The principal causes of death are stated as follows: Cholera infantum, 31; diarrhœa and dysentery, 29; diphtheria, 5; cerebro-spinal fever, 5; measles, 4; whooping-cough, 2; scarlatina, 7; phthisis pulmonalis, 18; tabes mesenterica, 11; other tubercular diseases, 7; convulsions, 36; meningitis, 6; bronchitis, 5; pneumonia, 6; gastritis, 20; peritonitis, 4; and debility, 14. Of the total number of deaths, 104, or 37.2 per cent., were of children under 5 years of age.

Weather.—The mean temperature during the month was 70°.7, being 1°.8 higher than during July, 1880, and 1° higher than the July average for the past nine years. The highest temperature, 94°, occurred on the 5th, and the lowest, 52°, on the 1st. The mean reading of the barometer was 30.002 inches; highest, 30.279, on the 1st; lowest, 29.694, on the 20. Monthly range, 0.585. Rainfall during the month, 5.34 inches, being 2.14 inches in excess of the quantity which fell in July, 1880, and 2.25 inches in excess of the average precipitation in July during the past nine years.

DIAGRAM TO SHOW THE PROPORTION OF DEATHS PER 1,000 PER ANNUM AS RECORDED IN THE MORTALITY REPORTS FURNISHED THE NATIONAL BOARD OF HEALTH FOR THE FOUR WEEKS ENDING JULY 9, 16, 23, AND 30, 1881, FROM THE FOLLOWING PLACES.

[Oblique lines represent mortality under 5 years; horizontal lines represent mortality over 5 years; both represent total mortality per 1,000 per annum.]

States.	Cities.	Total population according to the census of 1880.	Annual death rate per 1,000 under 5 years for 4 weeks.	Total death rate per 1,000 for 4 weeks.

ABSTRACTS FROM CONSULAR REPORTS.

AMOY, CHINA.—United States Consul W. L. Goldsborough reports for the three weeks ending July 9 that the city is free from epidemic. The population is estimated at 300,000. No record is kept of the number of deaths, and no attention is paid to sanitation.

BANKOK, SIAM.—Official information has been received through the Department of State that reports from the consul-general, under date of July 2, state that Asiatic cholera has made its appearance at Bankok, and that the daily mortality is estimated at 20. No deaths had occurred among the foreign population at the date of the report.

BARCELONA, SPAIN.—United States Consul F. H. Schenck reports 119 deaths during the week ending July 31. Population, 200,000; annual death rate, 38.7 per 1,000. Of the total number of deaths, there were, from measles, 6; diphtheria, 1; phthisis pulmonalis, 12; apoplexy, 19; diarrhœa, 15; scarlet fever, 1; typhus fever, 7; and from diseases of the respiratory organs, 11.

BRADFORD, ENGLAND.—C. O. Shepard, United States consul, furnishes the following mortality report for the week ending July 30: Total number of deaths, 54; annual death rate per 1,000, 18.1. There were 7 deaths from the seven principal zymotic diseases, including 2 from whooping-cough, 1 from fever, and 4 from diarrhœa. Of the total number of deaths, 34, or 62.9 per cent., were under 5 years of age.

BORDEAUX, FRANCE.—United States Consul George W. Rosevelt reports that during the month of July there were 615 deaths from all causes. Population, 215,140; annual death rate per 1,000, 34.3. Among the deaths reported there were, from cholera, 1; small-pox, 38; typhoid fever, 13; and from other contagious or infectious diseases, 18. There were also 71 deaths from consumption; 74 from diarrhœa; acute lung diseases, 16; apoplexy, 5; and from chronic affections, 115.

CALCUTTA.—A. B. Cobb, United States vice-consul-general, reports 186 deaths during the week ending July 9. Population, 429,555; annual death rate per 1,000, 22.5, as compared with 19.6 for the week preceding. The number of deaths from fevers was 60; from diarrhœal diseases, 19; from tetanus, 21; and from phthisis pulmonalis, 11. Of the total number of deaths, 8 were ascribed to cholera, 1 to small-pox, and 6 to typhoid fever.

CIENFUEGOS, CUBA.—United States Consul W. W. Cross reports thirty-two cases of yellow fever during the month of July. Deaths from yellow fever during July, 5. He also reports thirty-three cases and four deaths between the 1st and 18th of August. He states that the fever does not appear to be of a very malignant type, but that a great many cases are occurring among persons who have been residents of the island for a number of years.

CONSTANTINOPLE.—Reports received from United States Consul G. H. Heap, embracing the period between July 22 and August 8, confirm the statements made in previous dispatches regarding the disappearance of the plague in Mesopotamia. The last of the houses in which cases of the disease occurred were destroyed June 27, since which time no new cases of the plague have been reported. The cordons have been still further extended, and unrestricted communication among the inhabitants of the recently infected district permitted. Frequent sanitary inspections are, however, still being made, and the sanitary condition of the entire district is reported to be excellent. A strict quarantine, enforced by military authority, is maintained along the route taken by the pilgrims to Mecca, and the transportation of wool, especially, is interdicted, except under the most careful supervision of the sanitary authorities.

At Alexandria, Egypt, the council, under date of July 22, issued an order giving free *pratique* to the productions of Syria and the Red Sea, except rags, and the productions of the Gulf of Persia, if disinfected at Aden. In case of failure to disinfect, as required by the order, freight will be held under observation for 48 hours at the head of the Moise, and in case the articles are liable to infection, the passengers are required to disembark and the vessel to return to its port of departure.

HAVANA, CUBA.—Consul-General Henry C. Hall reports 179 deaths during the week ending August 13, of which number 33 were from yellow fever, 6 from small-pox, and 2 from typhoid fever.

GHENT, BELGIUM.—United States Consul Thomas Wilson reports a total of 350 deaths during the month of July. Population, 134,552; annual death rate per 1,000, 31.1. The causes of death are reported as follows: diarrhœa, 140; consumption, 52; bronchitis, 31; heart diseases, 17; apoplexy, 10; small-pox, 1; typhoid fever, 2; diphtheria, 2.

MOSCOW, RUSSIA.—The report of United States Vice-Consul August Weber for the month of May states that the total number of deaths in Moscow during that period was 2,128. The population is estimated at 601,969. Annual death rate per 1,000 during the month, 42.4. The principal causes of death were, pulmonary diseases, 302; acute diseases of the respiratory organs, 344; diarrhœal diseases, 344; typhoid fever, 256; small-pox, 17; other contagious or infectious diseases, 123.

ST. EUSTATIUS, WEST INDIES.—United States Consul George Doyle reports that during the 6 months ending June 30 there were 14 deaths. They were from ordinary causes: there is no prevailing disease on the island, and the sanitary condition good. The population is 2,060.

ST. MARTIN, WEST INDIES.—The report from United States Consul D. C. Van Romondt for the 6 months ending July 31 states that from a population of 3,200 there were 30 deaths. The sanitary condition of the island is good and there are no prevailing diseases.

TUNSTALL, ENGLAND.—United States Consul E. E. Lane reports that during the 3 weeks ending August 20 there were 31 deaths. There were ten deaths under 1 year of age and twelve under 5. The population is 29,673, and the annual death rate per 1,000 is 17.7.

APPLETON, WIS.—A communication received from Dr. J. T. Reeve, secretary of the State board of health of Wisconsin, states that the State board cordially indorses the action of the conference of State and municipal boards of health, held in Chicago June 29, relative to the spread of small-pox, and requests the adoption of such measures as will prevent its introduction into the United States from foreign countries. Local boards of health are urged to the exercise of the greatest care in watching and isolating first cases, and in the protection of the people by timely vaccination.

The following reports for the week ending August 20, 1881, are from places which do not require burial permits:

Allegheny, Pa., 79,000; deaths, 30; under 5 years, 19; cerebro-spinal meningitis 3, consumption 2, diarrhœa 3, typhoid fever 5, scarlet fever 6. Bath, Me., 7,875; death, 1. Belfast, Me., 5,308; death, 1. Brattleboro', Vt., 6,000; deaths, 2; under 5 years, 1; diarrhœa 2. Bucyrus, Ohio, 3,950; no deaths. Calais, Me., 6,172; deaths, 5; under 5 years, 4; diarrhœa 3, whooping-cough 2. Carrollton, Miss., 600; death, 1; under 5 years, 1; diarrhœa 1. Clinton, Mich., 1,200; death, 1. KEY WEST.—Official information has been received through the Surgeon-General of the Army and also from Dr. Lester, health officer, that one case of yellow fever developed there on August 22.

HAVANA, CUBA.—Reports received from Havana state that there were forty deaths from yellow fever in that city during the week ending August 19. Of the decedents, 22 were civilians.

CHEMICAL EXAMINATION OF DRINKING WATER.

[REQUEST FOR SPECIMENS OF SUSPECTED WATER.]

A careful study of the chief methods in use for the chemical examination of potable water, so far as organic matter is concerned, has been undertaken by order of the National Board of Health. It is particularly requested of the correspondents of the board, of medical men throughout the country, and of others interested in sanitary matters, that any well-marked case of disease which may seem on medical grounds fairly attributable to organic impurities in drinking water be promptly reported to Dr. J. W. Mallet, University of Virginia Post-office, Albemarle County, Virginia, with a few lines stating clearly the medical nature of the case, and the character of the evidence on which the water in question is suspected of having actually caused disease in persons who have used it.

It is further desired that a sample of each such water be forwarded for examination, *but not until notice has been received from Dr. Mallet that the analysts are ready to proceed with it*, since it is important that no useless delay should occur between the shipping of the sample and its investigation in the laboratory. In notifying any one who may be able to furnish specimens of suspected waters that may be forwarded, clear instructions will be sent as to the quantity of water required, and the mode of collecting, packing, and shipping it.

It is particularly desired that no case be presented on doubtful or vague evidence, since one important object of the inquiry demands that all such be rejected, and only those cases examined which involve the strongest grounds for believing that mischief has really been caused by organically foul drinking water.

The cost of packages and transportation for samples will be borne by the Board of Health.

NOTICE.—All official communications to the National Board of Health should be addressed to the *Secretary* of the Board, Dr. T. J. Turner, U. S. N. Correspondents and others whose writing may be for publication are reminded that much inconvenience is caused by writing on both sides of the paper.

National Board of Health

BULLETIN.

VOL. 3.] WASHINGTON, D. C., SATURDAY, SEPTEMBER 10, 1881. [No. 11.

ORIGIN AND GROWTH OF THE QUARANTINE SYSTEMS OF THE UNITED STATES, BY STEPHEN SMITH, A. M., M. D., OF NEW YORK.

STATE OF RHODE ISLAND.

BY DAVID KING, M. D., *of Newport, R. I.*

The first law passed by the general assembly of Her Majesties Colony of Rhode Island and Providence Plantations, in relation to quarantine, was during its session at Newport on the 27th day of February, 1711. It is entitled "An Act to Prevent the Spreading of Infectious Sickness," and reads as follows:

"WHEREAS *Contagious Distempers have been several times brought into this Colony, by the Masters of ships and other vessels, Coming into the several Ports of this Colony, from Places that are Infected therewith:*

"For the preventing whereof for the Futnre,

"*Be it enacted by the General Assembly,* and by the authority of the same, That no master or commander of any ship or other vessel, that shall come into any port or Harbour of this Colony, and shall in their passage hereto, have any person or persons sick on shipboard with the small-pox, or any other Contagious Disease, or shall come from any port or place where any Contagious Distemper is brief or prevalent, shall not bring to anchor their ship or vessel, in any of the ports of this government, within the distance of one mile of any publick ferry, pier, or landing place; or if any vessel or vessels that are at anchor therein, shall land nor suffer any person or persons, on board such ship or vessel to be landed, nor suffer any persons to come on board such ship or vessel, without a license first had from the Governour of this Colony for the time being, if they shall anchor in the harbour of Newport, or in his absence from one or more justices of the peace of said town, and if they shall anchor in any other harbour of this Colony, a licence shall be first had and obtained from some one or more justices of the peace of such town, under penalty of forfeiting one hundred pounds, good and lawful money of this Colony, to and for the use of the Colony, to be recovered by the General Treasurer of the Colony in the general Courts of Tryals of this Colony; by bill, plaint or information, and where the Offender or Offenders herein, shall have no essoin, protection or wager of law allowed.

"*And be it further enacted by the authority aforesaid,* That if upon the arrival of any such ship, or other vessel as aforesaid, in any harbour of this Colony, as aforesaid, any passenger on board, or any mariner thereto belonging, shall and do come on shore or land from such vessel, without a licence first had and obtained as aforesaid, that then, and in such cases, it shall and may be lawful for any justice of the peace of such town, where such person and persons shall land, to require and command, and send such person and persons so offending, on board such vessel again, or to confine them ashore to any such place, as to him shall seem Convenient, for to prevent the spreading of any infection; and the person or persons so offending, shall answer, satisfy and pay all charges that shall arise thereon, and shall forfeit twenty pounds, good and lawful money of said Colony, to and for the use of the Colony, to be recovered as aforesaid.

"And if the Offender or offenders have not estate sufficient to satisfy and pay the same, that they shall be set to work, by the direction, and at the discretion of the judges of such Court where such cause shall be tryed, until the same be fully satisfied and paid.

"And for the better putting this Act in Execution,

"*Be it enacted by the authority aforesaid,* That the Naval officer shall keep of this act publickly set up in his office, for the view of all masters of ships, and other vessels that shall enter with him; and the said Naval officer is hereby impowered upon any information unto him given of any ship or vessel arriving in this harbour, that any infectious distemper aboard, to send on board of such ship or vessel, a doctor to examine the same, as need shall require, and return thereof to the Governour, or in his absence, to some of the Assistants, or justices of the peace of the town of Newport to make report, that due care may be taken therein; and the master of such ship or vessel, shall pay all charges arising thereon; and if he refuse to pay the same, it shall be recovered by the Naval officer* in any Court of record within this Colony.

"*And be it further enacted by the authority aforesaid,* That if, notwithstanding the above said precautions to prevent any infectious distemper from being brought into this Colony, that if any person or persons, passengers, mariners, or slaves, shall be landed from on board any ship, or other vessel, and shall, after being landed, be taken sick with the small-pox, or any other infections distemper; that then and in such case, it shall and may be lawful, for any one assistant or justice of the peace of any such town where such cause shall happen, to remove such sick and distempered person and persons to such convenient place as shall to them appear to be necessary, to prevent the spreading thereof; and the person or persons so removed, if free to pay the charge thereof, and shall be recovered in any court of record within this Colony, by the person or persons that shall disburse the same; and if the persons so removed be slaves, then the owners thereof shall pay the same; and if the slaves are consigned to any person within the government, then such person to whom consigned, shall pay the charge of the same, to be recovered as aforesaid."

June, 1731. An act passed by the general assembly of Rhode Island, at Newport, June, 1731, to prevent vessels coming into the government from places infected with the small-pox.

"Every master of any ship or other vessel that shall come into the harbour of Newport and shall not bring to his vessel [at the Fort, Fort George]; When the Gunner shall fire a shot at him, shall for the first shot pay ten shillings, and for the second twenty shillings, and for every shot after the second Five Pounds; and the Naval Officer shall, before he clear said vessel, receive the same, and shall have three shillings as a fee for the same. All which fines to be for the use of the Colony."

February, 1743. An act passed by the general assembly of Rhode Island in February, 1743, to prevent the spreading of small-pox and other contagious sickness in this colony, with the following preamble:

"Whereas the Small-Pox and other Contagious Distempers have been several times brought into this Colony by masters of ships and other vessels coming from infected places, which has proved of pernicious consequence to the Trade, and greatly endangered the Lives of many of the Inhabitants of this Colony, and occasioned a very great expence to the Town of Newport in particular.

"And whereas the Laws to prevent the same, by Reason of their great Number, and the various Occasions on which they were Made, are become perplexed and intricate"—

The first section repeals all laws heretofore made relating thereto, and declares that "the following rules and orders shall for the future be kept and observed."

The first and second enactments repeat, with but slight and unimportant differences, the portions of the law of 1711. The act of 1743 enjoins—

"That the Governor, Deputy-Governor, Assistants, Justices, and Wardens, as aforesaid, be, and they are hereby, empowered and directed to send a Doctor or other suitable Person to examine into and to make report to him or them, respectively, of the true state of such vessel and the people on board, at the charge of the Master or Commander of such vessel; And the Naval Officer is hereby forbid to clear out such vessel 'til said charge (having been adjusted and settled by the Town Council of the Town where such vessel shall arrive) is fully satisfied and paid.

"That the Town Council of Newport, or other Town where such vessel shall arrive, be, and they are hereby, empowered and directed forthwith to put on board such vessel some suitable Person or Persons to secure said vessel and effectually prevent any communication therewith, at the Expence of the owners.

"That the Town Council of Newport, or other Town as aforesaid, be and they are hereby empowered and directed to confine on board said vessel, or send to some Pesthouse, or other suitable Place, all Persons, Mariners or Passengers or others, that came in said vessel, for a convenient time, until such of them as have, or are liable to have, the Small-Pox, or other infectious distemper, are perfectly recovered and cleansed from said Distemper, or have passed a suitable Quarantine, and also all other Persons that have gone on board such vessel without Licence, as aforesaid, at the charge and expence of such Persons, respectively, and also all other Persons that came in said Vessel, until they have been Sufficiently aired and cleansed.

"That the Town Council of the Town where such Vessel arrives be, and they are hereby, empowered and directed to appoint two

*The naval office was established in 1682. By an act of the general assembly of that date the governor was empowered "to appoint one or more naval offices, in such place or places in this colony, as he shall think fit and needful." Their duties were "to take entries of vessels, and in all things belonging to said office, to take care that the laws relating to navigation or customs and duties on goods and merchandize be duly observed."

meet Persons to take effectual, that all Goods, Wares, and Merchandises imported in such vessels which they think liable to hold and communicate the infection be landed on some of the Islands in the Narragansett Bay, and exposed to the sun and air, and cleansed, not exceeding ten days, nor under six days, before they are permitted to be brought into any House, Shop, or Warehouse, other than where they are cleansed as aforesaid; and when such goods are sufficiently aired and cleansed, Said Persons shall give the Owners or Possessors thereof a Certificate; and the Town Council shall allow or order said Goods to be delivered to the owner or owners thereof; And the charge and expence of landing, airing, and cleansing such Goods, Wares, and Merchandizes shall be borne by the respective Owner or Owners; and all Goods that are judged by the Town Council not liable to hold the Infection shall be delivered to the Owner or Owners without Delay and expence of airing as soon as may be consistent with the Safety of the Town in regard Parts of the Cargo. And all Goods, Wares, or Merchandize imported into any town in this Colony by Land from any place infected with the Small-Pox or other Contagious Distemper shall be aired, cleansed at the discretion of the Town Council of such Town, and at the Expence of the Owner or Owners thereof.

"That all goods imported in such vessel as aforesaid, that shall be clandestinely landed or brought into any House, Shop or Warehouse, without Certificate or allowance as aforesaid, or that shall be imported by land as aforesaid, and not cleansed or aired by order of the Town Council as aforesaid, shall be forfeited; one-third to and for the Use of the Colony and the other two-thirds to him or them that shall inform, and sue for the same in the Inferior Court of Common Pleas in the County where Such offence shall be committed; and all Assistants, Justices, and Wardens are hereby empowered and required, upon information given them, to seize and secure all such Goods, Wares, and Merchandizes in their respective Jurisdictions, until legal Trial."

"That the Town Council of Newport, or other Town as aforesaid, be and they are hereby empowered and directed to fix, settle, and adjust all Wages and Charges demanded by Persons employed by them to secure such vessel, or to air and cleanse such Goods, or to attend upon, and nurse Such Person, as aforesaid. And that if any owner, freighter, or Mariner, or Passenger as aforesaid shall refuse to pay such Wages and charges, so settled, adjusted, and fixed by the Town Council, that then the Town Treasurer of such Town is hereby empowered and required to sue for and recover such Wages and charges if above Five Pounds in the Inferior Court of Common Pleas in the County where such Charges shall be adjusted and settled, and if under that Sum, then before any two Justices or Wardens, as in the Case of other Actions. And the Judges of such Court where the Action is brought, are hereby empowered to tax double costs for the Plaintiff, any law, custom or usage to the contrary, notwithstanding.

"That for the better security of the Payment of what charges may arise on the Nursing or Attendance upon any Sailor or Mariner belonging to such Vessel as aforesaid, the Master thereof is hereby required to stop payment of the wages due to such Mariner, until certified from the Town Council, that such charges are fully satisfied and paid, on penalty of paying the same so far as the Amount of the Wages so paid by him: And no court in that Colony shall make up Judgement for any such Wages, until Satisfaction be made as aforesaid; And this Act being pleaded in any Court, where such wages, if sued for by such Mariner, shall be a temporary Bar of such Action. Any Law, Usage, or Custom to the Contrary notwithstanding. And the Master or Owner of any Servaut or Slaves on board such Vessels, or the Persons to whom such Slaves are consigned, shall pay all Charges, arising by them, for their Nursing and Attendance.

"That the Master of any Ship or other vessel coming into the Harbour of Newport, who shall refuse to bring to his Vessel, when the Gunner of Fort George shall fire a shot at him, shall pay Ten Shillings for the first shot and Twenty Shillings for the second, and Five Pounds for every shot afterward, to and for the use of the Colony; and three shillings to the Naval Officer as his Fee for receiving the same, who shall not clear out said Vessel till the Same is paid.

"That when the Small-Pox shall be prevalent in the Town of Boston, or in any other Town of New England, all Persons whatsoever (the Post only excepted) who shall come from such Town into the Colony, without remaining five days on the borders of this Colony, shall forfeit for such Offense Five Pounds, to and for the use of the Colony, upon legal conviction thereof before any two Assistants, or Justices of the Peace, who are hereby empowered to hear and try the same, and also to send back, or confine said Offender in some convenient Place until the term of five days be expired, after such Tryal and Judgement. And the Assistants, Justices of the Peace, or Wardens in any Town in this Colony, are hereby empowered to appoint proper persons at all Ferries or places that seem to them necessary, to examine on oath, or engagement, all Persons suspected to transgress this Law, and on occasion to apprehend and bring such Offenders before said Assistants, or Justices of the Peace, or Wardens, that they may be dealt with according to Law.

"That all Persons who Keep Publick Houses, or Boarders in their Houses, shall immediately acquaint the next Assistant Justice of the Peace or Warden of the Town, wherein they dwell, when any Person boarding or lodging in their house is taken sick with the Small-Pox, or other contagious Distemper, or suspected to be so on the Penalty of forfeiting Five Pounds to and for the use of the Town to be recovered by the Town Treasurer before any two Assistants, Justices of the Peace, or Wardens of said Town; and the Assistant, Justice of the peace, or Warden so notified is hereby empowered and directed to make proper examination by some Doctor or other skilful Person, and if it be the Small-Pox, or other contagious Distemper wherewith Such sick Person, is visited then immediately to set a proper guard to prevent the spreading of the infretion, and to summon the Town Council of such Town, who are hereby authorized and empowered to remove said Person being an Inmate or Boarder in any house in any town in this Colony, to any such place in the said Town as they shall think the most proper to prevent the spreading of the Infection, or to continue the said Guard as aforesaid, according as to them shall seem necessary, and likewise to confine all such Persons as may be by them suspected to have taken the Distemper in some proper place till they are recovered and cleansed from the said Distemper or have performed a suitable Quarantine; and all charges arising hereby, shall be adjusted, settled, and fixed by the Town Council, and paid by the Parties respectively concerned; and upon his or their refusal, shall be sued for, and recovered by the Town Treasurer as aforesaid.

"That in case the small-pox shall break out in any house, or family in any town in the County of Newport, the Assistants, Justices of the Peace, or Wardens in said Town, together with the Town Council thereof, be and they are hereby fully empowered to remove any inhabitant of said town, visited with the Small-Pox to the Pest House in said town, or any other convenient place in order to prevent the spreading of the Infection, or otherwise at their discretion, to place a guard round the Dwelling house of the infected Person as to them shall seem necessary. Any Law, custom or usage to the Contrary notwithstanding.

"That so long as the Town Council of any town, shall think fit to endeavour the preventing the spreading of the small-pox, no person whatsoever, under any pretence whatsoever shall presume to visit any person suspected to have the Small-pox, or to go into the house where suspected Persons are confined without a License first had from the Town Council, or from one Assistant or from two or more justices of the peace or Wardens of the town on the penalty of forfeiting for every such offense ten pounds in Money of the New Tenor; one-half to and for the use of the Town where such offense is committed, and the other half to him or them that shall inform and sue for the same in the Inferior Court of Common Pleas in the County. And such Persons on information of their offence, shall be liable to be confined till they are suitably aired and cleansed, or have performed a suitable Quarantine at the discretion of the Town Council to whom complaint of the same shall be made.

"That any person and persons who shall be legally convicted of willfully and purposely Spreading the Small-Pox within this Colony, he, she, or they shall be adjudged to suffer the pains and penalty of Death, as in the case of felony, without Benefit of the Clergy. And all persons legally convicted of wickedly endeavouring to spread the same shall be sentenced to be whipped not exceeding thirty-nine lashes, and suffer six months' imprisonment, and be kept to hard labour.

"That it shall and may be Lawful for any two or more Assistants, justices of the peace, or Wardens in any Town in this Colony having reason to suspect that any person or persons have endeavoured Wickedly and Wilfully to spread the Small-Pox in any town of this Colony, to commit such Person or Persons to his Majesty's Gaol, there to remain till he, she, or they give good and sufficient Security to appear at the next General Court of Assize and General Gaol Delivery, and of their good behaviour during said time. Provided Nothing in this Act shall be construed or understood to extend to such Practitioners in Physick as shall be allowed by the Town Council to inoculate the said Distemper, after the said Town Council have thought fit to desist their endeavours to prevent the further Spreading of said distemper."

An Act passed by the general assembly of his majesty's colony of Rhode Island, in August, 1747, modifying the mode of recovering the penalty consequent on the violation of the act of 1743, and for defraying the expense of guarding houses infested with the small-pox.

An Act in 1748 sets forth that the Small-Pox and other contagious Diseases have several times brought into this Colony by masters of Ships and other vessels coming from infected places, which have proved of pernicious consequence to the Trade, and greatly endangered the lives of many of the Inhabitants of this Colony, and occasioned a very great expense to the Town of Newport in particular.

"*Therefore be it enacted*, That no infected Vessel be anchored within one mile of any landing place under the penalty of sixty pounds; that no person shall come on shore without a proper license; that a Physician shall be sent on board to examine the vessel and crew and make a true report of the same; that the Town Council of Newport, or other town, shall have power to put a suitable person on board to prevent communication; that the said Council shall have power to confine the people on board or send them to the Pest Houses, and that all Goods arriving in such Vessels shall be properly aired and cleansed."

October, 1748: "That all the expences incurred, in consequence of said Vessels, shall be at the charge of the owners.

"That all travellers coming from Boston or other town, when Small-Pox shall be prevalent there, shall remain five days on the borders of the Colony; that all Persons who keep Public Houses, or Boarders in their houses, shall report when any of their Lodgers are taken ill of the Small-Pox, or any other Contagious Distemper; that in cases of contagious diseases, occurring in private Houses, the Town Council of the several towns shall have authority to send the individuals so infected to the Pest House, or other convenient place in said town; that Physicians refusing to perform any duty required by the Authorities to prevent the spreading of the Small-Pox, shall forfeit the sum of twelve pounds."

In October, 1751, the Hon. Stephen Hopkins represented the exposed condition of Providence with regard to the contagion of small-pox, and requested the grant of £600 from the treasury of the State for the establishment of a pest house in said town, which request was granted.

In May, 1752, "An act to prevent the small-pox from being brought into the colony by strangers and travellers coming from infected districts."

In May, 1776, the general assembly passed an act permitting inoculation for the small-pox in this colony:

"Whereas the small-pox hath made the most dreadful ravages in the army lately before Quebec, which was the principal cause of raising the blockade of that city, and there is great danger that the inhabitants of the United Colonies may, by the prevalence of that distemper, be rendered incapable of defense at a time when their safety may depend upon their most vigorous exertions;

"And whereas that distemper taken by inoculation is so easy and light, and the method of treatment so beneficial, that any number of persons inoculated are more likely to live than the same number of persons not inoculated; and as by introducing the practice of inoculation, with prudence and caution, the greater part of the male inhabitants of the colonies may soon get over that terrible disease, and the fatal consequences to be apprehended from our armies being infected therewith be averted:

"*Be it therefore enacted by the general assembly, &c.*, That one hospital may be established for inoculating for the small-pox in each county in this colony, in such town as the majority of the deputies in the county, in a meeting duly warned, shall agree upon. That the hospital in the town which shall be so agreed upon shall be fixed in some suitable and retired place in such town, under the direction of the town council or of such committee as the town shall appoint: *Provided*, That when such hospital shall be improved for that purpose, the town shall mark off the ground round said hospital at a distance not less than two hundred yards every way therefrom, and set and maintain a sufficient guard to prevent all persons in the hospital from going beyond the limits, and all persons without from passing within one hundred yards of them without the permission of the directors of the hospital, upon the penalty of 100 pounds."

Particular attention was ordered to be devoted to airing and cleansing the clothing and bedding of the patients, and proper penalties affixed to all violations of these orders, whether arising from the carelessness of the attendants and the want of proper care on the part of physicians, and the several towns were authorized to make further necessary regulations.

In September, 1793, the town council of Newport, during the prevalence of the yellow fever, published extracts from the act of the State legislature to prevent the spreading of the small-pox and other contagious sickness in this colony. (See Newport Mercury, Tuesday, September 24, 1793.) Thus vessels infected with yellow fever, on coming from any port where that epidemic prevailed, were obliged to anchor one mile distant from a landing-place, under a penalty of £60. And public houses were warned against receiving travelers without timely and immediate notice to the assistants, justices, or wardens of the town.

On the 21st of September, 1793, the governor of Rhode Island, Arthur Fenner, esq., issued the following proclamation: (See Newport Mercury, October 1, 1793.)

"Whereas a contagious distemper of the most malignant kind prevails in Philadelphia and the West Indies, and unless every necessary precaution is taken to prevent its being brought into the State, the lives of the good citizens thereof will be greatly endangered: I have, therefore, thought fit to issue this proclamation, earnestly recommending it to the several town councils, to all other officers, and to the citizens of this State, to use their most utmost vigilance in causing the law, to prevent the introduction and spreading of the small-pox and other contagious sickness, to be most strictly and punctually executed; more especially with respect to all vessels which shall arrive in this State from the West Indies, Philadelphia, and New York; there being reason to apprehend danger from the great intercourse between the last-mentioned place and Philadelphia. And it is expected and required of all masters of vessels, and others, coming from the said places, or from any other place infected with any contagious disorder, that they observe the said law with the greatest exactness."

An act was passed by the general assembly, in 1798, confirming the sanitary laws enacted in 1743 and 1748, and authorizing the town councils to make regulations for the preservation of the health of the inhabitants, and the governor to appoint health officers in every port deemed bh yim necessary, in order to visit all vessels suspected of having contagion on board, and to carry into effect the provisions of this act.

Acts have been passed in 1806, 1816, 1822, and 1840, by the general assembly, conferring from time to time on the town councils, or the board of aldermen in the several towns, sufficient authority to guard the people against contagious diseases. For the first century and a half the small-pox was the most malignant disease that invaded New England. Against the invasions of this disease the legislature in recent years has taken preventive steps, by enforcing acts for thorough vaccination, as in January, 1840, and subsequently. With regard to the yellow fever and cholera, the town councils acted efficiently, deriving their authority from the ancient laws, given here, against small-pox and other contagious diseases.

In January, 1850, Rhode Island passed laws to secure an adequate registration of births, deaths, and marriages on the recommendation of an authorized committee of the Rhode Island Medical Society. The secretary and a committee of the Rhode Island Medical Society were ordered to print the returns annually. On the establishment of the State board of health in April, 1878, the duties assigned to the retary of state, &c., of printing the registers, have been transferred to that body. Chapters 75, 76, and 77, in the general statutes of Rhode Island, printed in Cambridge, 1872, contain the general laws passed by the State on quarantine, contagious disease among cattle, and the registration of births, deaths, and marriages.

ABSTRACTS FROM CONSULAR REPORTS.

AMOY, CHINA.—United States Consul W. S. Goldsborough transmits reports for the weeks ending July 16 and 23, in which he notes the appearance of cholera among the native population during the week ending the 16th. A few cases occurred also during the succeeding week. The mortality from cholera and other causes is not stated, no mortuary record being kept by the authorities. It is stated, however, that cases of cholera during the summer months are not an unusual occurrence.

BARMEN, GERMANY.—United States Consul W. Schoenle reports a total of 45 deaths from all causes. Of the decedents 23 were under 5 years of age. The population is estimated at 95,000. Annual death rate per 1,000, 24.6.

CALCUTTA, BRITISH INDIA.—A. B. Cobb, vice-consul-general, reports that 176 deaths occurred in Calcutta during the week ending July 23. Population, 429,535. Annual death rate per 1,000, 21.3, as against 23.2 for the preceding week. Among the deaths reported there were 11 from cholera. He also forwards the report of Dr. K. McLeod, health officer, for the month of June, from which it appears that there were 689 deaths registered in Calcutta during the month, against 925 in May, giving an annual ratio of 19.2, against 25.8 per 1,000 of population. The number of deaths from cholera during the month of June was 36, as against 138 during the preceding month, and falls short of the number of deaths ascribed to this disease during all the corresponding months of the past decade, except in 1871, 1877, and 1880. There was also a decrease in the number of deaths from fevers and diarrheal diseases as compared with the report for May. The total for June, however, exceeds that for the corresponding months during one-half of the past decade. Of the decedents during the month under review 266 (including 31 still-born) were under 5 years of age.

DEMERARA, BRITISH GUIANA.—P. Figyelmesy, United States consul, writes, under date of August 4, that the two cases of yellow fever reported July 25 have recovered, and that no new cases have appeared; and under date of August 10 he reports that clean bills of health are being issued to vessels bound for ports in the United States, with the statement added that there has been no sickness since July 25. He also forwards the report of E. H. G. Dalton, registrar-general, for the several divisions of New Amsterdam for the months of March and April, and for the city of Georgetown for May, 1881.

In New Amsterdam there were 43 deaths in March and 23 in April. Some of the causes of death during the month of March are recorded as follows: From typhoid fever, 2; diarrheal diseases, 5; remittent and other fevers, 4; phthisis pulmonalis, 6. During March there were no deaths from typhoid fever. The deaths from diarrheal diseases were 2; from fevers, 2; phthisis pulmonalis, 1. During this month there were 2 deaths from bronchitis, 4 from pneumonia, and 6 from jaundice. No deaths were ascribed to either of these diseases during the preceding month.

In the city of Georgetown there were 145 deaths during the month of May. Among the causes of death reported were the following: Whooping-cough, 1; sore throat, 3; diarrheal diseases, 14; colony fever or ague, 2; other fevers, 3; thrush, 10; leprosy, 1; phthisis pulmonalis, 22; meningitis, 1; tetanus, 8; pneumonia, 1; and from kidney diseases, 7. Of the 145 deaths reported 75 occurred in hospital and other public institutions, and 31 were children under 1 year.

MARTINIQUE, WEST INDIES.—United States Vice-Consul John J. Ciceron reports that five cases of yellow fever occurred in Martinique during the week ending August 4, three of which resulted fatally. He also reports four cases with three deaths during the

[Continued from page 81.]

week ending August 19. Several cases occurred among the troops while in the mountains, and the disease is spreading among them since their return to the city.

MESSINA, SICILY.—George H. Owen, United States consul, forwards reports for the months of March, April, and May. The total number of deaths reported during that period was 646, giving an annual death rate of 33.1 for the entire population. The annual death rate per 1,000 during March was 37, during April 29.7, and during May 32.9. Of the total number of deaths registered there were 21 from typhoid fever, and 94 from other contagions or infectious diseases. The prevailing diseases during the period embraced in the reports were diphtheria, bronchitis, consumption, and gastric fever.

MONTEVIDEO, URUGUAY.—Reports received from United States Consul A. L. Russell, state that there were 312 deaths during the month of June, giving an annual death rate of 33.5 per 1,000. Among the deaths reported there were from consumption, 62; from diseases of brain and spine, 38; diseases of digestive organs, 36; small-pox, 17; typhoid and typhus fever, 9, and from other contagious or infectious diseases, 3.

NASSAU, N. P., BAHAMAS.—United States Consul T. J. McLain, jr., sends reports for the weeks ending August 13 to 27, inclusive, in which he states that the city is free from epidemic and is in good sanitary condition, under the energetic supervision of the board of health. The only prevailing diseases reported are intermittent and bilious fevers, incident to the summer months, and the cases are of mild type and few in number. A strict quarantine against West Indian and Southern ports is maintained.

NINGPO, CHINA.—United States Consul Edward C. Lord forwards reports from June 11 to July 30, inclusive. He states that the city is free from epidemic and in fair sanitary condition. Typhoid fever, diarrheal diseases, acute lung diseases, measles, whooping-cough, and scarlet fever, are reported as common, but in the absence of official records nothing is known of the mortality in the city.

POINTE À PITRE, GUADELOUPE, WEST INDIES.—Reports have been received from United States Consul Charles Bartlett, from July 16 to August 13, inclusive. During that period there were 53 deaths from all causes. There were 19 cases of yellow fever with 4 deaths during the period embraced in the reports, ranging from 4 cases with 2 deaths during the week ending July 23, to 7 cases with 2 deaths during the week ending August 13. The prevailing diseases are malarial and yellow fevers, and the city is reported to be in bad sanitary condition.

RIGA, RUSSIA.—United States Consular Agent Peter Bornholdt reports, under date of August 16, the appearance of a few cases of cattle sickness (Anthrax) in the province of Lavonia, Russia, and also in the vicinity of Riga.

SANTIAGO DE CUBA.—United States Consul J. C. S. Andrews reports that there were 112 deaths from all causes during the month of July last, giving an annual death rate of 33.3 per 1,000 of population. Of the total number of deaths, 3 were ascribed to yellow fever, 3 to small-pox, and 5 to typhoid fever. The deaths from yellow fever were confined to the troops, who are Spaniards. The harbor and vicinity continue free from yellow fever, and clean bills of health are issued to vessels bound for ports in the United States, unless cases of contagious or infectious disease are found on board.

SIERRA LEONE, WEST COAST OF AFRICA.—United States Consul Judson A. Lewis reports that during the month of June there were 54 deaths from all causes in Freetown, having a population of 21,931, giving an annual death rate of 29.5 per 1,000. Among the deaths reported there were from convulsions, 8; consumption, 2; fever, 11; asthma, 6. The city is in good sanitary condition and free from epidemic. The rainy season has set in. Rainfall on June 29, three inches.

SINGAPORE, INDIA.—A. G. Studer, United States consul, reports for the weeks ending June 27 and July 18. The sanitary condition of the city is good. The heat has been excessive for three months, and since the first of July there has been a considerable increase in the number of cases of diarrheal diseases. The report of the registrar general for May last gives a total of 324 deaths: population, 138,000. Annual death rate per 1,000, 28.2. Among the deaths registered there were from fever 70, diarrheal diseases 68, consumption 26, venereal diseases 45.

ST. PETERSBURG, RUSSIA.—United States Consul-General Edgar Stanton reports that a total of 640 deaths from all causes was registered during the week ending August 6, giving an annual death rate of 50.3 per 1,000 of population. Of the total number of deaths, there were from lung diseases 142, from diarrhœal diseases 173, small-pox 5, and from typhus and other fevers 103. The mortality among children under 5 years of age was 267 or 14.7 per cent. of the total number of deaths.

ST. PIERRE, MARTINIQUE, WEST INDIES.—Information has been received from the Department of State that the vice-consul at St. Pierre reported to that department under date of July 20 that yellow fever had again broken out in that city and vicinity.

ST. THOMAS, WEST INDIES.—United States Consul V. V. Smith forwards the sanitary report of Dr. A. Magens for the weeks ending July 23 and August 5, from which it appears that during the week ending July 23 there were 16 deaths, among which there were from pneumonia 1, consumption 1, dysentery 1, intestinal catarrh 1, gastric fever 2, and heart disease 3. The number of deaths during the week ending August 5 was 10. Of this number there were 3 from consumption and 2 from gastric fever.

VALPARAISO, CHILI.—United States Consul L. H. Foote reports a total of 391 deaths during the month of June last. Of this number there were from lung diseases 59, from fevers 116, from small-pox, 11, and from phthisis pulmonalis 40. The annual ratio per 1,000 was 46.3.

VERA CRUZ, MEXICO.—United States Vice-Consul Charles Trowbridge reports five deaths from yellow fever during the week ending August 14. Total deaths from all causes during the week 19. Prevailing diseases yellow, pernicious, and intermittent fevers. The city is reported to be clean and the sewers well disinfected with coal tar and lime, and the harbor is reported free from sickness.

The following reports for the week ending August 7 are from places in which burial permits are not required:

Allegheny, Pa., 79,000; deaths, 33; under 5 years, 16; accident 3, cerebro-spinal meningitis 1, consumption 1, diarrhœa 4, diphtheria 2, typhoid fever 3, scarlet fever 2, bronchitis 1, puerperal 1, small-pox 1. Bath, Me., 7,875; deaths, 8; under 5 years, 3; diarrhœa 1, whooping-cough 3. Belfast, Me., 5,308; deaths, 2; consumption 1. Brattleboro', Vt., 6,000; death, 1. Bucyrus, Ohio, 3,950; no deaths. Clinton, Mich., 1,200; no deaths. Columbus, Ga., 10,123; deaths, 11; under 5 years, 7; consumption 1, diarrhœa 1, typhoid fever 1, pneumonia 1. Corinth, Miss., 2,264; no deaths. Decatur, Miss., 1,000; no deaths. Fayette, Miss., 400; no deaths. Greenville, S. C., 6,159; deaths, 2; under 5 years, 1; diarrhœal diseases 1, congestion of lungs 1. Helena, Mont., 3,630; deaths, 5; under 5 years, 2; accidents 3, diarrhœa 1. Hernando, Miss., 1,000; no deaths. Huntingdon, Pa., 4,500; death, 1; under 5 years, 1; diarrhœa 1. Indianola, Tex., 900; death, 1; under 5 years, 1. Iuka, Miss., 816; deaths, 2; under 5 years, 1; diarrhœa 1. Jefferson, Tex., 3,250; deaths, 2; measles 1. Kenosha, Wis., 5,500; deaths, 5; under 5 years, 2; accident 1, diarrhœa 1, malarial fever 1, small-pox 1. La Salle, Ill., 8,885; deaths, 4; under 5 years, 2; diarrhœa 1, malarial fever 1, consumption 1, whooping-cough 1. Louisiana, Mo., 5,000; deaths, 3; under 5 years, 1; consumption 1, diarrhœa 1, malarial fever 1. Madison, Ind., 9,009; deaths, 4; under 5 years, 1; consumption 1, diarrhœa 1. Martinsburg, W. Va., 6,334; deaths, 2; under 5 years, 1; consumption 1, whooping-cough 1. Milan, Tenn., 1,800; deaths, 2; under 5 years, 2; congestion of lungs 1, whooping-cough 1. Milford, Mich., 1,400; death, 1; under 5 years, 1; diarrhœa 1. Milledgeville, Ga., 3,000; no deaths. Muscatine, Iowa, 8,412; deaths, 2; under 5 years, 1; cerebro-spinal meningitis 1. Muskegon, Mich., 11,300; deaths, 10; under 5 years, 9; diarrhœa 7, malarial fever 2, pneumonia 1. Painesville, Ohio, 5,504; deaths, 5; under 5 years, 2; diarrhœa 3, accident 1, cerebro-spinal meningitis 1. Pass Christian, Miss., 4,500; deaths, 2; under 5 years, 1; consumption 1. Pearlington, Miss., 1,200; no deaths. Pleasant Hill, Miss., 253; no deaths. Port Gibson, 1,200; death, 1. Port Royal, S. C., 750; no deaths. Rensselaer, Ind., 900; no deaths. Santa Cruz, Cal., 5,000; deaths, 2; under 5 years, 1; typhoid fever 1. Starkville, Miss., 1,454; deaths, 2; under 5 years, 2; diarrhœa 2. Tampa, Fla., 740; no deaths. Titusville, Pa., 9,046; deaths, 5; under 5 years, 3; congestion of lungs 1, diarrhœa 1. Tuscaloosa, Ala., 2,017; deaths, 3; consumption 1, whooping-cough 2. Winchester, Va., 5,000; no deaths. Youngstown, Ohio, 15,421; deaths, 9; under 5 years, 4; consumption 2, diarrhœal 6, puerperal 1. Total population, 261,000; deaths under 5 years, 66; total number of deaths, 130; annual rate per 1,000, 25.9.

REPORTS OF CORRESPONDENTS OF THE NATIONAL BOARD OF HEALTH.

HAVANA, CUBA.—Advices received from Havana state that there were 26 deaths from yellow fever during the week ending August 26. Of this number 17 were of civilians. There are at present about 225 cases of the disease in the city. Yellow fever is also reported as raging epidemically at Barbadoes. There were but three deaths from small-pox in Havana during the week ending August 26.

KEY WEST, FLA.—Official information has been received from the Surgeon-General, United States Army, and also from Dr. J. Y. Porter, assistant surgeon, United States Army, that the case of yellow fever reported at Key West August 22, resulted fatally on the 27th of that month.

PITTSBURGH, PA.—Dr. W. Snively, registrar, reports 25 cases of small-pox and varioloid during the week ending September 3.

LA SALLE, ILL.—Dr. Floyd Clendenin reports under date of September 3 the existence of four cases of small-pox within about four miles of the city. The disease is at present confined to Polish settlers, and was introduced by a Polish girl who contracted it in Chicago, and died some time after her arrival in the settlement.

NAPLES, ITALY.—United States Consul E. H. Smith forwards reports from February 5 to May 7, inclusive, 14 weeks, during which period 4,665 deaths were reported from all causes, giving an annual death rate of 37.3 per 1,000 of population, estimated at 462,519.

The following table exhibits the number of deaths reported each week from eight principal causes, and the total number from each disease during the period embraced in the reports:

Weeks ending—	Typhoid fever.	Other contagious diseases.	Cerebro-spinal fever.	Acute diseases of the respiratory organs.	Diseases of the circulatory organs.	Diseases of the digestive organs.	Tubercular diseases.	Small pox.	Total number of deaths.
February 5	5	21	36	61	21	11	31	.....	234
February 12	4	20	37	69	32	21	21	.....	244

April 16	5	104	34	82	33	30	43	.....	362
April 23	10	102	40	65	23	39	29	.....	351
April 30	9	80	48	107	25	43	37	.....	405
May 7	7	95	41	79	24	30	31	.....	368
Total	101	900	511	1,107	407	356	481	2	4,665

The percentage of deaths from the diseases named in the above table to the total number of deaths is as follows: Typhoid fever, 2.3; other contagious diseases, 19.3; cerebro-spinal fever, 10.9; diseases of the respiratory organs, 23.7; of the circulatory organs, 8.7; of the digestive organs, 7.6; and tubercular diseases, 10.3.

National Board of Health

BULLETIN.

VOL. 3.] WASHINGTON, D. C., SATURDAY, SEPTEMBER 24, 1881. [No. 13.

[Continued from Bulletin No. 9, page 64.]

SKETCH OF THE HISTORY OF QUARANTINE AT PENSACOLA, FLA.

By DR. R. B. S. HARGIS.

In 1866 quarantine was, as usual, put in operation in May, by military authority, and Dr. W. A. W. Spotswood, formerly a medical officer of the United States Navy, and afterwards surgeon-in-chief of the bureau of medicine and surgery of the Confederate navy, was appointed to take charge. Nothing of any interest occurred during his service for that season. During the winter of 1866–'67 quite a considerable increment of population to Pensacola obtained; it was estimated to be about one thousand, most of whom were from the Northern States of the Union, the rest foreigners. Business of every kind that before the war between the States was common to the city and surrounding country revived. Foreign commerce was restored to a limited extent, while quite a considerable commercial intercourse obtained with New Orleans, Mobile, and other domestic ports on the Gulf, as well as others of the North Atlantic. The health of the city had greatly improved during the spring of 1867. No disease of an epidemical character nor any other malady of fatal tendency prevailed. Indeed the city might have been considered healthy; a few* cases of remittent fever, which was associated with an eruption of a scarlatinoid character, occurred during the latter part of June and in July, but they were of a mild type and very amenable to treatment.

In 1867 quarantine was re-established under the authority of General Seymour, stationed at Barrancas Barracks, and Dr. W. A. W. Spotswood was reappointed to till the office of quarantine physician. The station was located at Clapp's Woods, situated on Santa Rosa Island, equidistant between Pensacola and the navy-yard, about six miles from either place.†

On the 21st June the British ship Fair Wind arrived from Kingston, Jamaica, West Indies, where a malignant form of yellow fever was prevailing with great mortality. Notwithstanding this vessel exhibited a clean bill of health and presented a remarkably cleanly appearance and "was ordered to quarantine for ten days," it was well that she was thus dealt with, as will presently appear. "She had been reported by the health officer as remarkably clean, well ventilated, and well appointed in every respect and with no sickness whatever on board, excepting the case of the steward, who was suffering from old age and general debility." * * *

This vessel had scarcely weighed anchor, on the 1st of July, to come up to the city, when one of the men was taken down. On the 3d of July, at 9 a. m., I was requested to visit the sick on board; the vessel anchored two miles from the city. I found that another man had sickened early that morning. Several were attacked within two or three days. All the crew, numbering thirteen, fell sick in quick succession, and by the 21st four had died, making in all six deaths out of a crew of fifteen; the last death took place on the 19th. The ship being free from any sickness was, under my direction, thoroughly cleansed and disinfected. The infection in this ship was confined exclusively to her deck; she was the cleanest merchant ship I ever inspected; not a single stevedore while employed in loading her contracted disease. I carefully examined the log of this vessel and found that she had had two sick in transit from Kingston, one of whom died and was buried at sea; both doubtless had yellow fever.‡

* These cases were undoubtedly of malarial character. They were readily cured by quinine and the usual adjuncts. One case that fell under my observation in the last stage died. There was suppression of urine in this case. No signs or symptoms of yellow fever of a *pathognomic* character were manifested in any of its stages.

† This place was selected by the military authorities of the navy-yard and forts during the war of the rebellion and until 1869, when it was chosen as the most convenient locality for the time being.

‡ The type of fever that prevailed on the Fair Wind was very peculiar. All were what have been termed "walking cases." There was no *prodroma* in any case; all were taken suddenly and violently with intense headache, pain in the back and limbs, generally with fever, in which the thermometer in all indicated a temperature varying from 105° to 109°. The temperature of those that recovered never exceeded 106°. The duration of the febrile stage was seventy-two hours, and the calm stage, or what I term the stage of repair, continued to the seventh day, and death took place in one in a few hours, in another in twenty-four hours, in the rest about the fifth day. Suppression of urine obtained in all that died, associated with hemorrhage from all the orifices. No black vomit in any case. No discoloration took place during life; but when dead all became of a purplish hue. The back was perfectly black. A remarkable feature of all the cases was absence of vomiting or irritability of the stomach. The brain and spinal cord were the seat of the profoundest lesions. This type was peculiarly malignant, and differed very materially in its manifestations from the type that subsequently prevailed, the same year, in Pensacola. The infection of this ship did not reach any of the other vessels in the harbor nor any place or person in the city; if it had, its type would have predominated and mortality been excessively great.

On the 24th of July the schooner Texana, from New Orleans, where yellow fever had been prevailing since the 15th of June, having been introduced into that city by the bark Florence Peters, from Havana, arrived, having passed the quarantine, the health officer reporting her "health good." The mate was taken sick before she came to anchor in the bay and was ill about three days, when application was made at the custom-house for hospital relief; a room was provided for him at Mrs. ——, who kept a boarding-house on Bayleu street, and I was requested to visit him on the 9th of August, and found him in the calm stage of the fever and in a state of stupor; the skin was of a bronze hue, eyes yellow, tongue dark brown color and dry, temperature 98.05° Fah.; urine albuminous. Patient recovered. The disease spread, first, from room to room, then from house to house, street to street, and so on until it became epidemic throughout the city. The mortality was about ten per centum. The type of this epidemic differed widely from that which prevailed on the Fair Wind, as indicated above, showing that it certainly had a very different source. The disease approached the subject by the usual prodroma, viz, a sense of weariness, headache, loss of appetite, *malaise*, and the chilly sensations followed in a few hours by violent superorbital pain and fever. The pyrexial stage continued no longer than forty-eight or sixty hours. The fatal cases commonly terminated on or about the fourth or fifth day, skin invariably yellow, and black vomit in every one of them.

In 1868 quarantine was again established under the direction and by authority of General Seymour, commanding at Fort Barrancas. The quarantine went into operation in May—the station was at Clapp's Woods—and continued until frost in November. Dr. W. A. W. Spotswood was again appointed to fill the position of quarantine physician. No official reports were made during the service of Dr. Spotswood, except of a verbal character, which have passed out of recollection.

In 1869 and 1870 a boarding officer was stationed at Fort Pickens under the authority and direction of the commandant of the navy-yard. Dr. Charles H. Pierce was quarantine physician. Dr. W. S. Lee was appointed by city authorities to board and inspect all vessels having a flag on the foremast which signified "from a foreign port."

1871. This year I was appointed city physician by the board of health, and was *ex officio* quarantine physician, and Dr. W. S. Lee acted as inspector and Dr. N. R. Cary as quarantine physician. The station was now again located at Navy Cove, opposite the city, five miles distant; a very suitable place: deep water near the shore, and safe anchorage. At this point the first lazaretto was built by authority of the city board of health and under the direction of F. C. Humphreys, esq., mayor of the city. The building was situated about two hundred and fifty feet from the water in a beautiful grove, which afforded ample shade. It was built of undressed yellow pine lumber, and consisted of one story, embracing one large ward 20 by 40 feet in dimensions; two small rooms, one for the physician and the other for the steward, and a pantry and kitchen, all in close proximity, but separated by narrow open corridors. The main building had a gallery in front and in the rear. The doctors' and steward's rooms were protected by similar additions. It was sufficiently commodious to answer the purpose. Good water was obtained by means of a pump. No written reports were made by the quarantine physician.

HAVANA, CUBA.—Advices received from Havana state that there were 31 deaths from yellow fever during the week ending September 9. Of this number 17 were of citizens and sailors of merchant vessels. The remaining 14 occurred in the military and naval hospital.

CORRECTION.

The deaths published in the BULLETIN of September 3d and 10th as having occurred at Asbury Park during the weeks ending August 20 and 27 are reported as having been of non-residents, and not properly chargeable to that locality.

NOTICE.—All official communications to the National Board of Health should be addressed to the *Secretary* of the Board, Dr. T. J. Turner, U. S. N. Correspondents and others whose writing may be for publication are reminded that much inconvenience is caused by writing on both sides of the paper.

DIAGRAM TO SHOW THE PROPORTION OF DEATHS PER 1,000 PER ANNUM AS RECORDED IN THE MORTALITY REPORTS FURNISHED THE NATIONAL BOARD OF HEALTH FOR THE FOUR WEEKS ENDING AUGUST 6, 13, 20, AND 27, 1881, FROM THE FOLLOWING PLACES.

ABSTRACTS FROM REPORTS OF STATE AND LOCAL BOARDS OF HEALTH.

STATE BOARD OF HEALTH OF CALIFORNIA.

August, 1881.

Dr. F. W. Hatch, secretary, furnishes the report of the State board of health for August.

Mortality reports were received during the month from twenty-six cities and towns, embracing an aggregate population of 354,968. The total number of deaths from all causes was 469, giving an annual death rate of 15.84 per 1,000. The following table exhibits the principal causes of death and the distribution of diseases throughout the State:

August, 1881.	Population.	Total deaths.	Consumption.	Acute lung diseases.	Diphtheria.	Diarrhœal diseases.	Typhoid fever.	Malarial fevers.	Whooping cough.	Small-pox.

MEMPHIS, TENN.

The report of the board of health of the taxing district of Shelby County, Tennessee, furnished by Dr. G. B. Thornton, president, gives a total of 107 deaths, from all causes, during the month of August. Whites, 53; colored, 54. The population given, as by the census of 1880, is 33,593. Whites, 18,622; colored, 14,971. Based upon this population, the annual death-rate per 1,000 during the month was—whites, 34.15; colored, 43.28. The number of deaths under 5 years was—whites, 24; colored, 29.

The mortality during this month is largely in excess of that during the corresponding period in 1880. The number of deaths reported during that month being—whites, 29; colored, 43; total 72.

The principal causes of death are reported as follows: Congestive chill—whites, 3; colored, 1; diphtheria—white, 1; colored, 1; diarrhœal diseases—whites, 4; colored, 5; fevers—whites, 6; colored, 3; consumption—whites, 4; colored, 9.

PITTSBURGH, PA.

Dr. W. Snively, registrar, reports 97 deaths during the week ending September 10; of this number 57 were under 5 years of age. He also reports the prevalence of small-pox, 42 cases having been reported during the week.

GLENS FALLS, NEW YORK.

Dr. T. M. Ingalsby, secretary of the board of health at Sandy Hill, reports the prevalence of small-pox at Glens Falls, three miles distant, where the disease has prevailed since July 1. The board of health has ordered the vaccination, at public expense, of all school-children and other persons not protected from the disease.

ABSTRACTS FROM CONSULAR REPORTS.

ALGIERS, AFRICA.—United States Consul Alex. Jourdan forwards reports for four weeks, July 10 to 31 inclusive. The total number of deaths reported during that period was 205, giving an annual death rate per 1,000 of 39.2.

The principal causes of death were as follows: Phthisis pulmonalis, 22; bronchitis, 11; typhoid fever, 10; croup, 8; diphtheria, 8; pneumonia, 9.

The sanitary condition of the city, the shipping and the adjacent country, is reported to be good and without any suspicion of yellow fever or other contagious or pestilential diseases.

ASPINWALL.—United States Consul James Thorington forwards reports for the two weeks ending September 3, during which period but 4 deaths from all causes were reported. He states that the port is in good sanitary condition and free from contagious or infectious diseases.

AUCKLAND, NEW ZEALAND.—The report of the registrar general on the vital statistics of the principal towns of New Zealand during the month of June, 1881, has been received from United States Consul G. W. Griffin. The report embraces returns from fifteen towns having an aggregate population of 132,612. The total number of deaths registered during the month was 171, giving an annual death rate of 15.4 per 1,000. Of the total number of deaths 91, or 53.2 per cent., were of children under 5 years of age.

BANGKOK, SIAM.—The United States Consul-General reports to the State Department that the cholera has appeared in Petchaburi, where the American Presbyterian Church has a mission. For several days the mortality has been estimated at several hundred per diem. The disease is believed to be now on the decrease.

BARMEN, GERMANY.—W. Schoenle, United States consul, reports a total of 39 deaths during the week ending August 27. Population, 95,000. Annual death rate per 1,000, 21.3.

The sanitary condition of the city is good, and no deaths are reported from contagious or infectious diseases.

BRUNSWICK, GERMANY.—United States Consul W. C. Fox reports 33 deaths during the week ending August 27. Population, 75,000; giving an annual death rate of 22.9 per 1,000. Of the deaths reported there was 1 from croup and 2 from whooping cough.

[Continued on page 100.]

[Continued from page 97.]

BRESLAU, GERMANY.—Henry Dithmar, United States consul, reports 244 deaths from all causes during the week ending August 20. Among the deaths reported there were 3 from typhoid fever and 67 from other contagious or infectious diseases. Diarrhœal diseases are reported as prevailing. Population estimated at 273,000. Annual death rate per 1,000, 40.87.

BUDAPESTH, HUNGARY.—Henry Shern, United States consul, forwards reports for the weeks ending August 13 and 20. During that period 588 deaths from all causes were reported. Among these there were from small-pox, 11; scarlatina, 9; typhoid fever, 12; and from diarrhœal diseases, 172. Population, 378,159. Annual death rate per 1,000, 40.5.

BUENOS AYRES, ARGENTINE REPUBLIC.—E. L. Baker, United States consul, reports a total of 552 deaths during the month of July, giving an annual death rate of 23.8 per 1,000 of population.

During the month of July there was an increase of 69 in the number of deaths as compared with the preceding month. Typhoid fever, pneumonia, and tubercular diseases are reported as prevailing, as also small-pox in mild form.

The sanitary condition of the city is not considered good, owing chiefly to the unfavorable winter weather.

CALCUTTA, INDIA.—Acting Vice-Consul General C. C. Bancroft reports a total of 207 deaths for the week ending July 30, giving an annual death rate per 1,000 of 25.1, as compared with 21.3 for the week preceding. Among the deaths reported there were 9 from cholera, 16 from typhoid fever, 3 from phthisis pulmonalis, 25 from tetanus, and 24 from diarrhœal diseases.

CARDIFF, WALES.—W. Bruce Lovie, United States vice-consul, reports 22 deaths from all causes during the week ending September 3. Population, 85,373. Annual death rate per 1,000, 13.3. The city is in good sanitary condition, and free from contagious or infectious diseases.

CAPE HAYTIEN, HAYTI.—United States Consul Stanislas Goutier, under date of September 15, reports the prevalence of small pox at that port.

DRESDEN, SAXONY.—United States Consul J. T. Mason reports 112 deaths during the week ending August 27, being 19 less than the number reported in the preceding week. Population, 220,878. Annual death rate per 1,000, 26.1. Among the deaths reported there were from diphtheria, 5; small-pox, 1; diarrhœal diseases, 28; phthisis pulmonalis, 16.

FREETOWN, SIERRA LEONE, WEST COAST OF AFRICA.—United States Consul Judson A. Lewis reports 54 deaths from all causes during the month ending July 31. Four cases of small-pox were reported during the week, one of which resulted fatally. There were also 5 deaths from phthisis pulmonalis, 10 from fevers, and 3 from diarrhœal diseases.

The population of Freetown is estimated at 21,931, giving an annual death rate of 29.5 per 1,000 during the period covered by the report.

HAVANA, CUBA.—United States Consul-General Henry C. Hall reports 155 deaths from all causes during the week ending September 3. Of this number there were from yellow fever, 21; small-pox, 2; and typhoid fever, 6. The city is not in good sanitary condition.

HONOLULA, SANDWICH ISLANDS.—D. A. McKinley, United States consul, reports a total of 53 deaths from all causes during the month of July. Among the causes of deaths reported were the following: Dropsy, 14; consumption, 7; small-pox, 2; heart disease, 3; fever, 2, and convulsions, 2. The total number of deaths was 17 in excess of the average for the corresponding period during the past five years.

MALTA AND GOZO.—C. B. Eynaud, United States vice-consul, sends reports for the two weeks ending August 15, showing a total of 214 deaths from all causes. Population, 154,830. Annual death rate per 1,000, 36.6. The principal causes of death were as follows: Diarrhœal diseases, 54; phthisis pulmonalis, 10; croup, 2; typhus fever, 3; typhoid fever, 3; meningitis, 4; tetanus, 2; pneumonia, 4. Of the total number of deaths 140, or 65.4 per cent., were of children under 5 years of age.

MELBOURNE, AUSTRALIA.—O. M. Spencer, United States consul, reports 415 deaths in Melbourne and suburbs during the month of June, giving an annual death rate of 19 per 1,000 of inhabitants. Of the deaths reported there were from scarlatina, 9; diptheria, 4;

croup, 6; whooping cough, 3; typhoid fever, 16; phthisis pulmonalis, 55; bronchitis, 33; pneumonia, 277; and congestion of the lungs, 6.

MUNICH, BAVARIA.—William Hummel, United States vice-consul, reports 168 deaths during the week ending August 27. Of this number there were 5 from scarlatina; 9 from diptheria; and 2 from whooping cough. Diarrhœal diseases are reported as prevailing.

POINTE-A-PITRE, GUADELOUPE, WEST INDIES.—United States Consul Charles Bartlett forwards reports for the two weeks ending August 27. During this period 34 deaths were reported. Of the total number of deaths 3 were caused by yellow fever, of which disease sixteen cases occurred. Malarial and yellow fevers are reported as prevailing, and the city is not in good sanitary condition.

PORT-AU-PRINCE, HAYTI.—United States Vice-Consul General John B. Terres reports, under the date of September 1, the arrival of the British bark Siena with lumber from Wilmington, N. C. Two of the crew died on the passage, and it is reported that still others are sick with yellow fever. No communication is allowed between the vessel and the shore, and no other cases of the disease are known to exist in the harbor or the city.

PRAGUE, BOHEMIA.—United States Vice-Consul Leo Sckles forwards reports for three weeks ending July 16 to 30, during which period a total of 453 deaths from all causes was registered. Of this number there were from consumption, 102; from small-pox, 2; from typhoid fever, 10; from typhus fever, 3; and from other contagious or infectious diseases, 37. The population of Prague is estimated at 260,805, giving an annual death-rate of 30.4 per 1,000.

QUEENSTOWN, IRELAND.—United States Consul E. P. Brooks reports, for the week ending September 3, that the sanitary condition of the city is good. But four deaths were registered during the week, and no diseases of a contagious or infectious character were reported.

ROUEN, FRANCE.—Albert Rhodes, United States consul, reports a total of 48 deaths during the week ending September 3. No deaths from contagious or infectious diseases are reported, and the city is said to be in fair sanitary condition.

[Continued on page 102.]

The following reports for the week ending September 10, 1881, are from places in which burial permits are not required:

Allegheny Pa., 79,000; deaths, 41; under 5 years, 20; accident 1, cerebro-spinal meningitis 1, consumption 6, diarrhœa 3, diphtheria 4, typhoid fever 3, scarlet fever 5, pneumonia 2, bronchitis 1, puerperal 2. Bath, Me., 7,875; deaths, 5; under 5 years, 1; diarrhœa 1. Belfast, Me., 5,208; death, 1; consumption 1. Brattleboro', Vt., 6,000; death, 1. Bucyrus, Ohio, 440; no deaths. Calais, Me., 6,172; deaths, 3; under 5 years, 1; diarrhœa 1, congestion of lungs 1. Carrollton, Miss., 600; death, 1. Clinton, Mich., 1,577; no deaths. Corinth, Miss., 2,264; death, 1; puerperal 1. Crystal Springs, Miss., 955; no deaths. Decatur, Miss., 1,000; no deaths. Fayette, Miss., 400; death, 1; malarial fever 1. Greenville, S. C., 6,159; deaths, 6; under 5 years, 2; diarrhœa 2, typhoid fever 2. Hernando, Miss., 1,000; no deaths. Huntingdon, Tenn., 1,200; death, 1; diarrhœa 1. Iuka, Miss., 816; no deaths. Kenosha, Wis., 5,500; no deaths. Louisiana, Mo., 5,000; death, 1. Madison, Ind., 9,009; deaths, 2; under 5 years, 1; diarrhœa 1, malarial fever 1. Martinsburg, W. Va., 6,334; deaths, 2; under 5 years, 1; consumption 1, diarrhœa 1. Milan, Tenn., 1,800; death, 1; under 5 years, 1. Milford, Mich., 1,400; no deaths. Milledgeville, Ga., 3,000; death, 1. Muskegon, Mich., 11,300; deaths, 24; under 5 years, 16; accident 1, consumption 1, diarrhœa 17, typhoid fever 4, scarlet fever 1. Painesville, Ohio, 5,504; deaths, 4; under 5 years, 1; accident 1, diarrhœa 1. Pass Christian, Miss., 4,500; no deaths. Pearlington, Miss., 1,200; death, 1. Pleasant Hill, Miss., 253; death, 1; under 5 years, 1; diarrhœa 1. Port Royal, S. C., 750; deaths, 2; malarial fever 2. Rensselaer, Ind., 900; no deaths. Santa Cruz, Cal., 5,000; no deaths. Senatobia, Miss., 935; no deaths. Starkville, Miss., 1,454; death, 1. Tampa, Fla., 740; deaths, 2. Titusville, Pa., 9,046; no deaths. Tuscaloosa, Ala., 2,017; no deaths. Winchester, Va., 5,000; deaths, 2; under 5 years, 1; diarrhœa 2. Youngstown, Ohio, 15,421; deaths, 5; under 5 years, 3; accident 1, diarrhœa 3, malarial fever 1. Total population, 216,829; deaths, under 5 years, 49; total number of deaths, 110; annual rate per 1,000, 26.5.

RIO DE JANEIRO, BRAZIL.—United States Consul Thomas Adamson forwards reports for the three weeks ending August 20, during which period 506 deaths were reported. Population, 330,000. Annual death rate, 26.6. Of the total mortality there were 4 deaths from yellow fever, 3 from small-pox, 4 from typhoid fever, 11 from pernicious fever, and 83 from consumption. Pulmonary diseases are reported as prevailing.

SINGAPORE, INDIA.—A. G. Studer, United States consul, reports, under date of August 1, that the sanitary condition of the city and shipping is good. The cholera in Bangkok is reported as abating in consequence of the prompt measures adopted by the Siamese Government. The epidemic still prevails in the provincial towns. Nearly 3,000 of the Siamese are reported to have died of the disease within four weeks. Among the deaths reported was that of the French consul-general.

ST. PETERSBURG, RUSSIA.—Edgar Stanton, United States consul-general, reports a total of 550 deaths during the week ending August 20. Population, 680,000. Annual death-rate per 1,000, 42. Among the deaths reported there were from small-pox, 5; typhoid and other fevers, 65; and from other contagious or infectious diseases, 41. Of the total number of deaths 222, or 10.3 per cent., were of children under 4 years of age.

ST. GEORGE, BERMUDA.—United States Consul Charles P. Williams reports the arrival, on the 8th instant, of the American bark Azor, Ames, master, from Adah, Africa, for Boston. The vessel had been out sixty-three days and lost one man on August 23 with coast fever. The captain and one man were sick on the arrival of the vessel, which at the date of the report, September 14, is still detained at quarantine. No communication is allowed with the vessel except through the health officer, from whom it is ascertained that the sick are now convalescing.

VALPARISO, CHILE.—United States Consul Lucius H. Foote reports a total of 458 deaths from all causes during the month of July. Of this number there were from phthisis, 48; lung diseases, 95; fevers, 113; and small-pox, 8. The population of the city is officially estimated at 101,088, giving an annual death-rate of 54.3 per 1,000.

VERA CRUZ, MEXICO.—Charles Trowbridge, United States consul, reports 28 deaths from all causes during the week ending August 28. Of this number 4 deaths were ascribed to yellow fever and 2 to small-pox. The city is reported clean and the harbor free from sickness.

WARSAW, RUSSIA.—United States Consul Joseph Rawicz reports 9 deaths from small-pox during the week ending August 20. The total number of deaths during the week from all causes was 315, giving annual death-rate of 40.9 per 1,000.

National Board of Health

BULLETIN.

VOL. 3.] WASHINGTON, D. C., SATURDAY, OCTOBER 1, 1881. [No. 14.

ORIGIN AND GROWTH OF THE QUARANTINE SYSTEMS OF THE UNITED STATES.

[By STEPHEN SMITH, A. M., M. D., of New York.]

STATE OF NEW YORK.

The quarantine establishment of New York is, in position and appointments, one of the most important in the United States. In its earliest history its operations were limited to the city of New York, but with the growth of the city it became necessary, in order to properly protect New York, to extend its jurisdiction to all vessels entering the harbor. Its appointments were at first of the simplest character, but with the progress of sanitary knowledge these equipments have been so perfected that they now meet the highest demands of science. From an establishment which delayed travel and embarrassed commerce, it has become an institution which protects and aids the traveler and greatly facilitates commerce. It is an acknowledged fact among the merchants of New York that its quarantine is the handmaid of its commerce.

The history of the New York quarantine must be the history of the development and growth of other similar establishments in the United States. From small and inefficient local organizations, designed for the protection of a single community, they must advance with the increase of population and commerce to the position of quarantines for populous States. Located at the entrance of the great water-ways through which foreign travel and commerce enter the United States, this class of quarantine establishments is rapidly assuming a national, and even inter-national, importance and character.

The first quarantine act seems to have been passed by the Colonial legislature in 1755. Previously to that date there were many acts of the council designed to prevent the importation of small-pox and other malignant fevers of the West Indies and their spread in the provinces.

In 1702 a malignant (yellow) fever appeared in New York, and on August 27 it was ordered that a proclamation be issued for a solemn fast to be kept in the city and county of New York the 2d day of September to divert Almighty God's present and impending judgments (of sickness) from the province.

September 17, 1702.—Proclamation to be issued "that during the time of the malignant distemper in New York, all persons that die thereof, or any other distemper, be buried in twelve hours after their decease upon penalty of £5, to be paid by the parties who keep above ground any dead person for a longer time, for the use of the poor of the city."

In 1714, April 8, we first meet with a quarantine order. It was to the effect that vessels coming from Jamaica should quarantine at the watering place under Staten Island. This is believed to be the point where the quarantine grounds were located in 1799 and which continued to be so occupied until 1859.

In 1716, January 31, this order was extended to all vessels from the West Indian Islands. It was also provided that a doctor should visit the vessels and examine the people on board. This is the first notice of a health officer, but it is probable that a physician was usually selected to perform this duty.

Staten Island, as a place of quarantine, was not continued, but Nutten (Governor's) and Bedloe's Islands are frequently designated as the places where vessels shall perform quarantine. Bedloe's Island was especially selected for vessels arriving with small-pox. In 1745 Margaret McDonald petitioned the general assembly as follows:

> That the petitioner has for this twenty-one years past resided on the said island, during which time several vessels have come in from foreign ports that had on board persons which had the small pox, who were ordered to her, and having been at great expences and trouble to make convenience for such distempered persons, and not having received any reward for her care and trouble, therein humbly prays the honorable house to take her case into consideration, and grant such relief as to them may seem meet.

In 1741–'42 New York was visited with a severe form of fever which has usually been regarded as yellow fever. Dr. Cadwallader Colden, lieutenant-governor of the province, wrote a paper upon the fever, in which he compared it with the fevers of the Pontine Marshes. Whatever its nature may have been, it excited much discussion, especially in regard to its importation, and led to more direct action of the Colonial government in the prevention of the introduction of contagious diseases by quarantine measures.

The following extract from the minutes of the council, April 1, 1742, is interesting in this connection:

> His Honour acquainted the Board that he had received Information that the Smallpox was very rife and mortall at Curacao, and that two Vessels were just arrived from thence, in one of which the Captain dyed of the Small Pox at the Hook, and others had it on Board, and that he had ordered the said Vessells into the North River to perform Quarantine, and asked the advice of the Board what should be further done to prevent its infecting the Town, or with the Vessells now riding at anchor in the North River.
>
> The Board were thereupon of opinion that before the said Vessells should be suffered to Unload or come up to the Town they should be visited by some of the Practitioners in Physick of this City, and produce a Certificate of Health signed by them. And that all the Cloaths on Board the said sloop be washed and aired before they come on Shore and the Vessells Smoaked and Scrubbed and Certificates thereof be returned to his Honour.
>
> Ordered that the Pilots do order all Vessells coming from Curaçao to Anchor below and not Come up to the Town till Leave be first obtained.
>
> Ordered that the Mayor do send a Constable or other Officer to Bedlars [Bedloe's] Island, where one of the People from *Curaçao* is ill of the Small Pox, and attend him there, and give directions that none of the People who Came in that Vessell and now ashore on the said Island do Come into this City without Leave.
>
> At a Councill, etc., April 7th, 1742, His Honour acquainted the Board that there is a Brigantine now and has for some time past been riding Quarantine near *Nutten* [now *Governor's*] Island, the said Brigne being Come from Curacao. But no one on Board being sick, and all of them having had the Small Pox, asked the advice of the Board what should be further done with the said Brigantine.
>
> Ordered that upon producing a proper Certificate of the Vessell having been *fumed*, washed, &c., and the Cloaths having been Cleansed and Aired, that she have Liberty to Come up.
>
> Ordered that the Ship Oswego now Coming in from St. Eustatia be ordered to an Anchor below till Inquiry be made about her. It being reported that the Small Pox rages at St. Eustatia.

Among other proceedings of the governor and council at this period, the following proclamation is of special interest:

> By His Excellency, the Honourable George Clinton, Esq., Captain General and Governor in Chief of the Province of New York, and Territories thereon depending in America, and Vice-Admiral of the same, &c.
>
> A PROCLAMATION.
>
> Whereas the Plague and other Contagious Distempers, have for a long while past, raged in several parts of the *Streights*, and in the *Mediterranean*: and the Small-Pox is now very rife at *Jamaica*, and malignant Fevers and divers other infectious Diseases are prevalent in several Parts of *America*; AND WHEREAS the great Number of Vessels and Persons daily coming into this Province from these parts, may bring in among us the said contagious Distempers, to the Endangering the Healths and Lives of His Majesty's good Subjects residing here, unless due Care and previous Search and Enquiry be made, concerning the Health of the People on board such Vessels, and of the Health, State and Condition of the places from whence they come. AND, I having much at Heart the Security and Welfare of all his Majesty's Subjects, and more particularly those under my Government and being desirous, as far as in me lies, to prevent the bringing in and spreading of any Contagion or Infection among them: I HAVE therefore thought fit, by and with the Advice of his Majesty's Council for this Province, to issue this Proclamation, *Ordering and Directing*, and I do by these Presents, *order and* direct, and strictly charge and require all Masters of Vessels (who after the Publication hereof shall come or be bound for the Port of *New York*) not to bring, or cause to be brought, his or their Vessel near to any of the Wharfs or Docks of this City, before such Vessel shall have been visited by some able Practitioner in Physick, nor before a Certificate of the Health of the People on board the same shall have been by him signed and returned to me; nor before my Leave be first obtained for that Purpose: And I do hereby further order, and strictly charge and require, that every such vessel be brought to Anchor at some convenient Place and Distance from this City, there to remain without suffering any person whatsoever to come from or go on board the same, until such Vessel hath been visited, and such certificate hath been returned and Leave obtained, as aforesaid: And I do hereby require his Majesty's Surveyor and Receiver General, and the Officers of His Majesty's Customs for this Province, not to suffer any entry to be made of any such Vessels, until the foregoing Orders have been duly and punctually complied with; And I do further injoin the several Pilots of this City not to bring up any Vessel alongside or near to any of the Wharfs or Docks aforesaid; but that they do in all Respects comply with, observe and follow my Order in Council of the Seventh of *December* last, under pain of forfeiting their Branches, and incurring such penalties as may be by Law inflicted on them; AND I do strictly charge and require all Owners, Masters and Marriners of Vessels, and all whom it may concern, to take due Notice hereof, and govern themselves accordingly, as they will answer the Contrary at their Peril.
>
> GIVEN *under my Hand and Seal at Arms in* New York, *the* First *Day of* March, *in the* Seventeenth *Year of the Reign of our Sovereign* Lord GEORGE *the Second by*

the Grace of God, *of* Great Britain, France *and* Ireland, KING Defender of the Faith, &c., and in the Year of our Lord 1745.

GEORGE CLINTON.

By His Excellency's Command,
GEO. JOS. MATHEW, *D. C. G.*

God save the King.

In 1755, the Colonial legislature passed the first quarantine law. It is not apparent what particular circumstance or occurrence led to the enactment of this law. The proceedings were as follows:

On the 24th of April, 1755, the house "*Ordered*, That a bill be brought in to prevent infectious distempers being brought into this colony and to hinder the spreading thereof." Mr. Miller of Suffolk County and Mr. Filkin of Dutchess County were the committee.

On the following day Mr. Miller presented to the house a bill entitled "An act to prevent infectious distempers being brought into this colony and to hinder the spreading thereof," which was read the first time and ordered to a second reading.

On the 28th of April the bill was read the second time and committed to a committee of the whole house; several amendments were made and several clauses added.

On the 28th of April the bill passed the house and was sent to the council for its concurrence.

The bill passed the council without amendment May 2, and was signed by the lieutenant-governor, James Delancy, May 3, 1755. It provides as follows:

AN ACT to prevent infectious Distempers being brought into this Colony and to hinder the spreading thereof

In order, as much as may be, to prevent the Small-Pox, Yellow Fever or any other Contagious Distemper being brought into this Colony:

Be it Enacted by his Honour the Lieutenant-Governor, the Council and the General Assembly, and it is hereby Enacted by the Authority of the Same That all vessels having the Small-Pox, Yellow-Fever, or other Contagious Distemper on board; and all Persons, Goods, Merchandizes whatsoever, coming or imported in such vessels and all vessels coming from any place infected with such Distempers, shall not come into any Ports or Harbours of this City, or never [illegible] it" the same city than the Island commonly called *Bedlow's* Land; and shall be obliged to make their quarantine there, or in such other Place or Places, for such time and in such Manner as the Governor or Commander-in-Chief, by and with the Advice and Consent of his Majesty's Council, shall think proper and reasonable to direct and appoint. And no such Vessel, Person, Goods and Merchandizes shall have respectively performed and be discharged from such Quarantine, no such Persons, Goods or Merchandizes, or any of them, shall come or be brought on shore, unloaded, or go or be put on board of any other Vessel within this Colony, or the neighboring Colony of New Jersey unless they shall be first permitted and licensed by Order from the Governor, or Commander in Chief for the time being, by and with Consent of the Council. And all Masters or Commanders of such vessels, and all others who shall presume to put on shore, unload, or put on board any other Vessels as aforesaid, any Person or Persons, Goods or Merchandizes, contrary to the true Intent and Meaning of this Act, having first Notice thereof, shall forfeit the Sum of Five Hundred Pounds "Two," current money of this Colony.

II. *Be it also Enacted by the Authority aforesaid*, That the several Branch Pilots belonging to this Colony, or any other Person or Persons, who shall be thereunto appointed and sent by the Government, shall use their utmost Endeavors to hail every Vessel coming into this City from Sea; and if he shall be informed the said Vessel hath come from any Place infected with the Small-Pox, Yellow-Fever, or any other contagious or "infectious Distemper, or hath any Person or Persons sick on board with any such Distemper, they shall immediately give Notice to the Commander of the said Vessel of the Penalty aforesaid, and forbid his going any further with his Vessel than *Bedlow's* Island aforesaid and that he anchor there until he shall have further Directions from the Governor and Council of this Colony, what to do, and how to conduct himself; and also that he suffer no Goods to be unloading, or putting on board any other vessel, any Person or Goods out of his said Vessel, under the Penalty aforesaid. And any Branch Pilot, or any other Person thereunto appointed, neglecting his or their Duty therein, shall respectively forfeit the sum of *Fifty Pounds*. And if any Person or Persons shall come on shore from such Vessel, it shall and may be lawful, by Force and Violence to compel such Person or Persons to return on board the said Vessel or to dispose of them in some other Place, in order to prevent the Infection.

And "III that" in case any vessel shall Come from any Place visited with such contagious Distemper or have any Person or Persons on board actually infected with the Small Pox, Yellow Fever, or other contagious Distemper and the Commander of such Vessel, upon demand made as aforesaid, shall not make a true Discovery thereof, such Commander shall forfeit the Sum of *Five Hundred Pounds*. And the Governor or Commander in chief of this Colony is hereby authorized and impowered to appoint some Surgeon or Physician to inspect all Vessels and Persons suspected of having on board or being visited with any of the said infectious Distempers, who is hereby required immediately to go on board of such vessel and make strict Enquiry in the Premises, and report the same accordingly, for which Enquiry and Examination such Surgeon or Physician shall be paid by the Owner or Master of the said Vessel the Sum of Twenty Eight Shillings for each such Examination.

III. *And be it further Enacted by the Authority aforesaid*, That the aforesaid Fines and Forfeitures shall be, One-third to any Person or Persons who will sue for, and prosecute the same to effect, and the other two-thirds to his Majesty, his Heirs, and successors, for and towards the support of his Government in this Colony, and be paid into the Treasury for that Purpose accordingly. This act to continue and remain of Force for one year from the Publication thereof and no longer (Jan. 1, 1762).

On the 11th of September, 1755, the following act was passed, viz:

AN ACT to explain an act entitled "An act to prevent Infectious Distempers being brought into this Colony, and to hinder the spreading thereof.

Whereas, by an act entitled "An act to prevent Infectious Distempers being brought into this Colony, and to hinder the spreading thereof," which was passed the Third Day of May, in the present Year, amongst other things it is enacted, "that if any Person or Persons shall come on shore from such Vessels as are therein mentioned, it shall and may be lawful, by Force and Violence, to compel such Person or Persons to return on board the said vessels or to dispose of them in some other Place, in order to prevent the infection."

And whereas, Persons who may happen to be infected with any of the Distempers mentioned in the said Act, though they belonged not to any Vessel, nor appeared to have been on board of any such Vessel, are within the Reason of the above clause for preventing the spreading of infection

I. *Be it therefore Enacted by his Excellency the Governor, the Council and General Assembly, and it is hereby Enacted by Authority of the Same* That all Persons who may happen to be any way infected with any of the Distempers mentioned in the said act are, and shall be deemed within the meaning of the said Clause, as fully as if they had been expressly mentioned therein.

II. *Provided always* That the Powers given by this Act be not executed but by an order to be previously obtained from the Governor or Commander in Chief for the Time being, with the Advice and Consent of His Majesty's Council of this Colony.

It will be noticed that the law provided for the appointment of "some surgeon or physician to inspect all vessels." This duty had hitherto been performed by appointment under orders of the Councils, and physicians had been selected only with reference to temporary duties. The appointment under this law does not seem to be a matter of official record. There is evidence, however, that Dr. JOHN BARD was the first appointee, and that he continued in office until he left the city in 1773.

That a health officer was appointed in accordance with the law would appear from the following communication to the house from the governor, Sir Charles Hardy, dated February 13, 1756:

GENTLEMEN: By the law now in force for preventing infectious Distempers being brought into this Colony no provision is made for a Pest House for the Reception of the Sick, without which the good intention of that Law cannot be effectually answered. The Physician appointed to visit sickly Vessels, hath offered some Thoughts on this Subject, highly deserving the Consideration of the Publick, and which by the Advice of his Majesty's Council I now send to you, not doubting but the necessity and usefulness of such a Building in a proper place will lead you chearfully to defray the expence of it.

ROBT. HARDY. *New York.*

That Dr. Bard was the physician alluded to would appear from the following extract from the proceedings of the Council, dated February 3, 1756, or ten days earlier.

Additional evidence is afforded by the following extract from a "Memoir of the late Doctor John Bard," in *Am. Med. and Philosophical Register* vol. 1, p. 64 1811:

"About the year 1739 the city of New York was alarmed by the arrival of a ship from Amsterdam, freighted for the transportation of Palatines among whom a malignant fever had broken out during the passage and destroyed a large number. On this occasion Doctor Bard was employed by the corporation to take proper measures to prevent the disease from spreading. The sick were quartered at a distance from the city, but notwithstanding every attention many of the passengers perished and although the disease was confined within the limits of the quarantine ground, it got into the city. Dr. Bard, with the assistance of Captain [illegible] escaping. He immediately drew up a memorial in which he represented the expediency of procuring a pest-house against similar occasions, which was immediately effected by the interest of *Beekman Bard* and the building upon it; the care of which, with the appointment of health officer was given to him.

The date given by the writer is erroneous but the fact that Dr. Bard was the first to recommend a pest house and that he was made health officer, are doubtless correct, though at an earlier period. Dr. Samuel Bard, son of Dr. John Bard, writing of his father after the death of the latter confirms the conclusion here given.

At a council held at Fort George in the city of New York on Tuesday, the third day of February 1756.

The report of Doct. John Bard was read setting forth that he had visited and examined the vessel that arrived yesterday in the Harbour from St. Thomas's, That the vessel left that place the 29th of December, and next day the master and three of the people were taken sick; that they then attempted to return back, but were obliged to put in at Crab Island where they stand to recruit their men That on the 1st of January they returned to St. Thomas's and sailed again the 9th, since which time their crew has been healthy except Captain De Hart who had a fever on Board, and was on recovery when they put him on shore yesterday on Staten Island. That the cargo is mostly Sugar and the only goods capable retaining infection cotton wool, Bed Clothes, Cloaths and Nothing. That the malignant Fever common to the Island prevailed on board the vessel left it, and that the Cargo was taken on Board when it had prevailed and not removed since, and therefore is of opinion that the Vessel should be removed, till those parts of the cargo capable of retaining infection and the vessel are well fired and cleansed.

It is ordered by His Excellency with the advice of the Council, that the said vessel called the Bell Savage, John Lewis, Master be forthwith removed near Bedlow's Island, and there perform Quarantine until further order. That the Cargo, Bedding, Sails, and Clothing, and other things capable of retaining infection be opened and aired thoroughly upon Bedlow's Island. That the vessel be smoaked and well washed with vinegar. That the Master, Passenger, and Crew in all 9 persons, be immediately sent on Board the said vessel, to remain in the vessel or upon the Island, until further order. And it is ordered that no other persons do go on Board that they be also subject to perform quarantine. That the vessel be supplied with provisions either by leaving them up in the Island, or putting them in the Vessels Boat eastern of the Vessel, and that the Mayor and Magistrates of this city do immediately issue orders to apprehend and carry the Master, Passengers and crew on Board the said vessel.

REPORTS OF CORRESPONDENTS OF THE NATIONAL BOARD OF HEALTH.

HAVANA, CUBA.—Advices received from Havana state that there were 25 deaths from yellow fever during the week ending September 16. Of this number 17 occurred among residents and sailors of merchant vessels, and the remaining 8 in the military hospital. Only one death from small-pox was reported during the week.

Mr. B. FERNOW, keeper of the colonial records in the State Department, Albany, to whom I am under great obligations for his patient search of the records for accurate data for this history writes in regard to the appointments as follows:

"I have not been able to find the name of any health officer appointed under the colonial act of May 3, 1755 continued in 1756 to January 1, 1762, and in 1762 to January 1, 1762) and doubt whether the governor appointed any. The act of 1755 authorizes and empowers the governor to appoint some surgeon or physician to inspect all vessels an persons suspected of having on board or being visited with any of the said infectious diseases and I take it that when ever a vessel arrived in port, which the pilot reported as having had, or still having small-pox. Acting on board, he sent one or the other physician to make the examination of *he said the force one of them*, but from the note C. M., vol. xxv., p. 145, you will see that he also delegated this authority to the mayor of New York, and from the absence of any commission or warrant to any physician for such duties I conclude he always delegated his power.

ABSTRACTS FROM CONSULAR REPORTS.

ACAPULCO, MEXICO.—United States Consul John A. Sutter, jr., transmits reports for the three weeks ending September 3. The total number of deaths from all causes during that period was 19. Among the deaths registered there was one from small-pox, and but one case of this disease was reported during the period embraced in the report. No other cases of infectious or contagious diseases are reported.

ALEXANDRIA, EGYPT.—The acting United States consular agent transmits reports for the two weeks ending September 3. The total number of deaths from all causes was 384, giving an annual death-rate of 45.5 per 1,000 of population. The city is reported in good sanitary condition and free from contagious or infectious diseases.

AMOY, CHINA.—Reports received from United States Consul W. E. Goldsborough for the two weeks ending August 6 state that cholera is prevailing to some extent among the natives, though to no greater extent than is usual during the summer months. The city is in bad sanitary condition, being without proper drainage and attention to cleanliness.

AMSTERDAM, NETHERLANDS.—D. Eckstein, United States consul, reports a total of 132 deaths during the week ending September 3. Among the deaths reported there was 1 from small-pox, 4 from typhoid fever, and 10 from other contagions or infectious diseases.

AUX CAYES, HAYTI.—United States Consul Thomas Dutton transmits reports for two weeks ending September 3. Total number of deaths from all causes, 7; population, 9,000. The city is in good sanitary condition and free from epidemic diseases.

BELFAST, IRELAND.—William Simms, United States vice-consul, reports a total of 80 deaths from all causes during the week ending September 3, giving an annual death-rate of 20.0 per 1,000 of population. Among the deaths registered there was 1 from small-pox, 1 from typhoid fever, 1 from typhus fever, and 17 from phthisis pulmonalis. The general sanitary condition of the city is good.

BRADFORD, ENGLAND.—The report for the week ending Sept 3 received from United States Consul C. O. Shepard gives a total of 52 deaths from all causes. The annual death-rate per 1,000 was 14.7, as against 17.0 and 26.1 for the corresponding week in 1879 and 1880.

BREMEN, GERMANY.—United States Consul William F. Grinnell transmits reports for the two weeks ending August 20 and 27. The total number of deaths that occurred during that period was 82, giving an annual death-rate of 18.9 per 1,000 of population. The principal causes of death were as follows: From consumption, 8; pneumonia, 5; bronchitis, 2; diarrhœal diseases, 11. Of the decedents, 48 or 58.5 per cent. were of children under 5 years of age.

BRESLAU, GERMANY.—United States Consul Henry Dithmar reports a total of 225 deaths during the week ending August 27. Of this number 68 are reported as having been caused by diarrhœal diseases. The annual death-rate per 1,000 during the period embraced in the report was 42.97.

BUDA-PESTH, HUNGARY.—Henry Sterns, United States consul, reports a total of 270 deaths during the week ending August 27. Among the deaths reported there were from small-pox, 7; scarlatina, 3; and typhoid fever, 6.

BUCHAREST, ROUMANIA.—Reports received from United States consul for the two weeks ending August 20 and 27 give a total of 168 deaths from all causes, or an annual death-rate of 36 per 1,000 of population. Among the deaths reported there were from measles, 2; diphtheria, 10; typhoid fever, 7; phthisis pulmonalis, 23; diarrhœal diseases, 39; pneumonia, 3; and meningitis, 4. Number of deaths of children under 5 years of age, 82, or 49.5 per cent. of the total number of deaths reported.

CADIZ, SPAIN.—Ernest L. Oppenheim, United States consul, reports under date of September 3 that the city is in good sanitary condition and free from all diseases likely to become epidemic. There were 30 deaths reported during the week, giving an annual death-rate of 24 per 1,000 of population.

CALCUTTA, INDIA.—C. C. Bancroft, acting vice-consul general, reports a total of 192 deaths during the week ending August 6, giving an annual death-rate of 23.3 per 1,000 of population as compared with 25.1 during the preceding week. Of the deaths registered there were from fevers, 62; diarrhœal diseases, 19; tetanus, 18; phthisis pulmonalis, 11; asthma, 3; and lung diseases, 5.

CAPE HAYTIEN, HAYTI.—Reports received from Stanislas Goutier United States consul, for the four weeks ending September 10, state that the health of the city is not good, and that small-pox made its appearance about the first of September, and that at the date of the report the number of cases were increasing and the disease was assuming a more virulent form.

CAPE TOWN, CAPE OF GOOD HOPE.—W. W. Edgecomb, United States consul, reports 47 deaths from August 8 to 22, inclusive. Annual death rate per 1,000, 34.9. The city is reported in good sanitary condition and free from epidemic diseases.

CONSTANTINOPLE.—United States Consul G. H. Heap reports, under date of September —, that cholera has become epidemic at Aden, Arabia. Thirty-two cases occurred during August, twenty-seven of which resulted fatally. The Egyptian Government has established a quarantine of seven days against the province of Aden.

GENEVA, SWITZERLAND.—United States Consul Lyell J. Adams reports a total of 122 deaths during the month of August, giving an annual death-rate of 19.6 per 1,000 of population. During the first two weeks in August enteritis was reported as prevailing among children. The city is reported to be in good sanitary condition.

GENOA, ITALY.—J. F. Hazleton, United States consul, reports 99 deaths during the week ending September 10, giving an annual death-rate of 27.8 per 1,000 of population. No prevailing diseases are reported.

GUAYMAS, MEXICO.—Charles E. Hale, United States vice-consul, reports 20 deaths during the month of August, of which number 16 were of Indians, and of the total mortality 10 deaths occurred among children under 5 years of age. No diseases are reported as prevailing. Sixteen inches of rain fell between the 10th and 16th of August.

HAVANA, CUBA.—Consul-General Henry C. Hall reports a total of 145 deaths during the week ending September 10. Population 195,437. Annual death-rate per 1,000, 38.5. During the week there were 26 deaths from yellow fever and 7 from typhoid fever.

KOBÉ, JAPAN.—United States Consul J. Stahl reports 21 deaths from all causes during the two weeks August 6 to 20 inclusive. Population, 19,248. Annual death-rate per 1,000, 28.4. No diseases are reported as prevailing.

LA GUAYRA, VENEZUELA.—Winfield S. Bird, United States consul, transmits reports from August 20 to September 9. Consumption and affections of the liver are reported as prevailing diseases.

LEITH, SCOTLAND.—Reports received from United States Consul J. A. Leonard give a total of 31 deaths from all causes during the two weeks ending September 10. The annual death-rate per 1,000 of population, during the week ending September 3, was 12.7, being the lowest rate of mortality recorded in Scotland during that week. During the week ending September 10 the annual rate per 1,000 was 13.5. In the eight principal towns of Scotland the death-rate was 18.8 per 1,000 of estimated population during the same period. Of the total number of deaths registered in these cities 89 were attributed to acute diseases of the chest. There were also 31 deaths from diarrhœa; 12 from fever; 7 from whooping cough; 11 from diphtheria; 4 from measles, and 8 from scarlet fever.

LIVERPOOL, ENGLAND.—United States Consul S. B. Packard reports a total of 497 deaths during the two weeks from August 20 to September 3, giving an annual death-rate of 23.4 per 1,000. During this time there were eight cases of small-pox reported with 2 deaths; six cases of typhoid fever and 3 deaths; forty cases of typhus fever and 5 deaths; sixty cases of scarletina and 28 deaths, and ninety-five cases of measles and 28 deaths. Eight deaths were also reported from whooping cough.

LONDON, ENGLAND.—Joshua Nunn, United States vice-consul-general, transmits report for the week ending September 3. The total number of deaths from all causes was 1,190, giving an annual death rate of 16.2 per 1,000 of the population estimated for the middle of the year. The death rate this week is the lowest that has prevailed in any week during the past ten years, though the average death rate during the past nine weeks of the current quarter exceeds that for the corresponding periods in both 1879 and 1880. Among the 1,190 deaths there were 22 from small-pox, 35 from measles, 40 from scarlet fever, 8 from diphtheria, 18 from whooping-cough, 1 from cerebro-spinal fever, 13 from enteric fever, 57 from diarrhœa, 4 from dysentery, and 1 from simple cholera, making a total of 199 deaths referred to these diseases, which is 186 below the corrected average number in the corresponding week during the past ten years.

MARACAIBO, VENEZUELA.—United States Consul E. H. Plumacher reports the prevalence of yellow fever during the month of August in the city. A number of cases have also occurred among foreign sailors, one of whom died. The city is reported to be in a very filthy condition, the stench in some places being sickening in its character. Very little effort is made to cleanse the streets, and the

(Continued from page 105.)

absence of the rains usual at this season of the year has permitted a large accumulation of filth which otherwise would have been carried off. No report is made of the number of deaths.

NEWCASTLE-UPON-TYNE, ENGLAND.—Evan R. Jones, United States consul, reports a total of 50 deaths during the week ending September 3. Annual death rate 17.8 per 1,000 of estimated population. The deaths registered included 2 from fever, 7 from diarrhœa, 5 from phthisis pulmonalis, and 7 from other diseases of the respiratory organs. Of the total mortality 38 per cent. was of children under 5 years of age. The natural drainage of Newcastle is reported to be excellent, and the sanitary condition of the city fair.

PALERMO, ITALY.—United States Consul S. P. Bayley transmits reports for the four weeks ending August 27, during which period 281 deaths from all causes were reported, giving an annual death rate of 16.6 per 1,000 of estimated population.

PRAGUE, BOHEMIA.—Leo Sekeles, United States vice-consul, reports 145 deaths during the week ending August 6. Of this 29 were from consumption, 1 from small-pox, 2 from typhoid fever, and 8 from other contagious or infectious diseases.

PORT AU PRINCE, HAYTI.—John B. Terres, United States consul, transmits reports for the two weeks ending September 6. During this period 26 deaths were reported, giving an annual death rate of 22.5 per 1,000 of population. The British brig Sienna from Wilmington, N. C., is still in quarantine in the outer harbor, though no new cases have occurred on board since report of September 1.

RIGI, RUSSIA.—P. Borchholdt, United States consular agent, reports that 357 deaths occurred in the city during the month of July. Of this number there were, from consumption, 31; from inflammation of the lungs, 10; from typhoid fever, 12; scarlet fever, 9; measles, 7; diphtheria, 2; croup, 14; and whooping-cough, 3.

SANTA CRUZ, TENERIFFE.—United States Consul W. H. Dabney forwards reports for two weeks ending August 13 and 20, during which period 18 deaths were reported. From consumption, 3; bronchitis, 1; meningitis, 3; diarrhœal diseases, 2. During the two weeks 216 cases of measles were reported, with but one death. The city is reported as being in bad sanitary condition.

SAN DOMINGO, WEST INDIES.—The report received from United States Vice Consul W. A. Read for the five weeks ending September 3 gives a total of 50 deaths during that period. Of this number 21 deaths occurred from small-pox.

SANTIAGO DE CUBA.—John C. Landreau, United States consul, reports 98 deaths during the month of July. Of this number there were 7 deaths from yellow fever, 1 from small-pox, and 3 from typhoid fever. The cases of yellow fever occurred among the Spanish troops. The harbor and vicinity are invaded to some extent with yellow fever, and bills of health are issued accordingly.

ST. PETERSBURG, RUSSIA.—United States Consul Edgar Stanton transmits report for the week ending August 27. Total number of deaths, 568. Annual death rate per 1,000 of population, 43.4. Deaths under 5 years, 214, or 37.6 per cent. of the total number of deaths.

Among the deaths reported there were 1 from small-pox, 83 from typhoid, typhus, and kindred fevers, and 34 from other contagious or infectious diseases.

VERA CRUZ, MEXICO.—Charles Trowbridge, United States vice-consul, reports, under date of September 11, that 8 deaths from yellow fever and 1 from small-pox have occurred thus far during the month. The city is clean and the harbor healthy.

VIENNA, AUSTRIA.—James R. Weaver, United States consul-general, transmits reports for the two weeks ending September 3. Total number of deaths, 656. Annual death rate per 1,000 of population, 23.3. Of the total number of deaths, 149 were caused by consumption. The sanitary condition of the city is reported as good.

WARSAW, RUSSIAN POLAND.—United States Consul Joseph Rawicz reports 11 deaths from small-pox during the week ending August 27. The total number of deaths during the week was 304, giving an annual death rate of 41.6 of the estimated population.

QUARANTINE REGULATIONS AT ST. MARY'S, GA.

The following ordinance has been adopted by the city council of St. Mary's, Ga.:

Be it ordained by the mayor and aldermen of the city of St. Mary's:

That on and after this date all vessels arriving from the West India Islands, or from any port supposed to be unhealthy, will be required to remain in quarantine twenty days after arriving in port and discharging her ballast, during which period the vessel must be thoroughly cleansed in every portion and fumigated; and her hold must be either whitewashed, painted, or varnished, which will be left to the discretion of the captain. Should any fever of the least suspicious nature supervene while in quarantine, the vessel will be required to immediately proceed to Sapelo Island, the regular quarantine station. Our pilots are instructed that, under no circumstances whatever, will a vessel be permitted to enter our port that has had any sickness on board during the voyage. Such vessel, before entering the bar, will be forthwith ordered to the national quarantine station.

Any person violating this ordinance shall be fined in a sum not exceeding five hundred dollars.

Passed in council July 18, 1881.

J. J. VOCELLE,
Clerk of Council.
C. HARDEE, *Mayor.*
A. F. BARNARD, M. D.,
Health Officer.

National Board of Health

BULLETIN.

VOL. 3.] WASHINGTON, D. C., SATURDAY, OCTOBER 8, 1881. [No. 15.

[Continued from BULLETIN No. 13, page 95.]

SKETCH OF THE HISTORY OF QUARANTINE AT PENSACOLA, FLORIDA.

[By Dr. R. B. S. HARGIS.]

In 1872 Dr. F. N. Blount was appointed quarantine physician by the board of health. During his service several vessels came into the harbor from infected ports and were subjected to detention at quarantine, but two only had yellow fever among their crews.

The British ship Chance arrived in August, nineteen days from Havana, twenty-six officers and men; five of the latter were sick on the passage, of whom one died. Fourteen were taken sick after arrival; all recovered. After the ballast was discharged she was fumigated with sulphurie-acid gas by burning sulphur, the hold freely "limed" and whitewashed, and all paint work repainted, clothing washed in hot water and thoroughly imbued with chlorine gas.

The bark Charles arrived September, six days from Havana, officers and crew numbering eighteen. The captain was taken a few days after reaching the quarantine station. No other cases occurred. The vessel was treated in the same manner as the Chance. Quarantine was raised after the 1st of November.*

1873.—This year, which was disastrous to Pensacola as will presently be seen, Dr. N. R. Carey held the position of quarantine physician. Several vessels from infected ports were quarantined, and, after having conformed to the requirements of the rules and regulations as to conduct and time of detention and disinfecting processes, were released with permits in due form to proceed to *pratique*. The Golden Dream, an infected ship from Havana, after twenty-four days at quarantine, and then fumigated and whitewashed, was admitted to *pratique* on the 20th July, and anchored about 500 yards from the wharf. A few days afterwards two cases of yellow fever occurred on board. There had been free communication with the ship by the harbor-master and persons from the city, and they were the media through which the infection† was introduced into the city and produced an epidemic. The number of cases was estimated, after a careful investigation and record of all that can be obtained, at about 600; number of deaths 63. The population was estimated to be about 4,000. Of these only about 1,000 were liable to take the disease.

1874.—This year quarantine was established again in May. Dr. F. N. Blount was appointed to the office of quarantine physician and held it until the 15th August, when he resigned. He was succeeded by Dr. R. N. Carey. At this time there were several vessels in quarantine, among which were the Spanish bark Castofoy, reported by Dr. Blount as having "arrived in July, twelve days from Havana, twenty officers and crew; two sick when she entered, both of whom died; all the rest of the crew were taken down, of whom three died." The stevedores who were engaged in discharging the ballast of this vessel took the disease and recovered. The German bark Laura Maria arrived also in July, forty-two days from Bahia, South America, eighteen men including officers. Six days after entrance, while discharging ballast, three men were taken down, and subsequently all of the rest of the crew, of whom three died. While the lighter Thomas Jones was discharging ballast from the vessel, three of her crew were taken sick, and one of them died. About the 1st of August the Spanish bark Virtuoso arrived, ten days from Havana, sixteen officers and crew; had three sick on the passage, and one death; two days after entrance another death occurred, and five days subsequently another.

Two or three days after the arrival of this vessel‡ the bark Elmira Coombs, of 300 tons register, arrived from Aspinwall after a passage of twenty-one days; all the crew had been sick of the so-called Chagres fever, a malarial fever common to all the districts of Central America bordering the sea. This vessel being unfortunately classed among infected vessels, was allowed to anchor between two infected vessels which lay about three hundred yards distant apart. It is not known whether any personal communication other than by the medical officer took place between them; it was contrary to the rules that any should, but the Elmira Coombs was discharged of her ballast by the crew of a lighter or barge, that was used in discharging ballast of infected ships. After the ballast had been taken out from the Elmira Coombs all the crew were apparently well; she was then admitted to *pratique* on or about the 15th of August. Several of her crew were soon afterward discharged; took up their abode at Kelly's boarding-house; here four of the men were taken sick; in two or three days cases occurred among those wretched dens of iniquity hard by, wherein indulgence of every vice contained in the decalogue was constantly rife. Here was the primitive source of the epidemic in Pensacola in 1874, and from Pensacola the monster extended its ravages to the navy-yard.*

1875.—This year Dr. William Martin was appointed physician to the quarantine establishment, and performed his duties faithfully and well. He was required by the board of health to make regular reports. As these reports cannot be found in the archives of the city, after diligent search, it is supposed they were burned with other records in the great fire of 1880. It is known, however, that several infected vessels arrived in the harbor and were ordered to the quarantine station. Of these we would particularize the Gulnare and Von Moltke, especially the *latter*; the former was detained until the quarantine was raised in November, a proceeding that was not warranted under any circumstances whatever; it was done as a precautionary measure, to be sure, but a morbid apprehension prevailed over a due exercise of reason. The Von Moltke requires infinitely more than a passing notice, for to this vessel the destructive epidemic of yellow fever at Barrancas Barracks, in 1875, is justly attributed. Dr. James S. Hénor, of this city, in a letter to Supervising Surgeon-General Woodworth, says:

"The Von Moltke arrived at this port from Havana on the 27th of June, 1875, and anchored during the night a short distance inside the bar, between Forts Pickens and Barrancas. The pilot, Roach, landed to visit his home in Warrington, a village adjoining Barrancas, and remained there all night, but reboarded the Von Moltke the next morning, and, after taking her up to the quarantine station, returned again to Warrington, where, a few hours after, he was arrested and sent under guard to quarantine. The Von Moltke was reported by the quarantine physician as having arrived June 27, with five cases of yellow fever on board. One had died *en route* and one on June 28 with black vomit. On July 2 the Gulnare arrived from Havana with one case of yellow fever. On July 12 three new cases occurred on board this vessel, and on the 15th one new case and two deaths.

* * * * * * *

"The only way to explain the introduction of the fever at Barrancas is by reference to the above-mentioned facts, viz, that the Von Moltke lay, during the night of the 27th, off the port, about three-quarters of a mile distant, with a strong southerly wind blowing directly from her towards and over Barrancas; that the pilot spent that night on shore, and was also ashore the next day at Warrington, which is only separated from Barrancas by an imaginary line, and with which, up to the outbreak of the fever, constant communication was maintained, night and day, as the post-office and all the stores are in the former place.

* * * * * * *

"That the fever appeared almost simultaneously in nearly every house in the garrison would seem to favor the wind theory; but on the other hand, if the disease was introduced by the pilot, the twenty-one days' interval afforded ample time for a general dissemination and germination of the seed.

* * * * * * *

"The quarantine of 1875 was the most effectual we have ever had. It was conducted jointly by Commodore Cooper and the Pensacola board of health. An acting assistant surgeon of the United States Navy was detailed by the commodore as quarantine physician, and furnished with a marine guard. No case of fever came from the station. The epidemic at Barrancas must have been caused either

* By reference to my letter to Dr. G. T. Gilmer, of Mobile, Ala., for the American Public Health Association, in the New Orleans Medical and Surgical Journal, October 8, new series, 1873, it will be seen that, before I had time to investigate thoroughly, I then attributed the medium through which the poison was introduced to the aerial current from the southwest that for several weeks had swept over the infected ship towards the city. It was afterwards, by diligent inquiry, I learned from a reliable source that the disease began its ravages in the houses of those persons who had visited the ship and purchased contraband goods.

† No official reports were made.

‡ Notes of Dr. F. N. Blount.

* Here I may be permitted to offer a passing tribute to the memory of Dr. N. R. Carey, a native of Virginia, who, true to his trust, fell at his post at the shrine of duty, and died of yellow fever in the lazaretto, at Navy Cove, in September, 1873. Dr. Carey was a refined gentleman, of strict honor and integrity, beloved by his relatives and friends, and respected by all his acquaintances. A lonely little mound, a few rods south of the lazaretto, marks the place of his remains, and where a suitable monument will ere long be erected to his cherished memory.

by the anchoring of the Von Moltke near that port during an entire night or by the visit of the pilot to Warrington."

Notwithstanding that "the quarantine of 1875 was the most effectual that we have ever had," yellow fever was introduced from the quarantine station into two places on the shores of Pensacola Bay. It was carried, in September, to Skinner's Mills, situated on Escambia Bay, nine miles distant from Pensacola, by a barge that had been used at quarantine in discharging ballast from infected ships. Communication between that locality (Skinner & Co.'s Mills) and Pensacola was prohibited by the city authorities during its prevalence, and, indeed, until the appearance of frost in November. About the last of August the same type of yellow fever that prevailed at quarantine was introduced into a little hamlet, having a population of about one hundred and fifty, called Powell's Point, situated about one mile below, south, of Hunt's Mills. It was introduced there by a person who had carried on an illicit trade, clandestinely, with contrabandists at the quarantine station. "It was very malignant and fatal," as stated by Dr. McDugald, of Milton.

1876.—Dr. W. A. W. Spotswood was again appointed to fill the office of quarantine physician for this year, and performed his duties satisfactorily to the board of health. No official reports can be found.

[To be continued.]

NO CASES OF CHOLERA IN PHILADELPHIA—OFFICIAL REPORT OF THE HEALTH OFFICER.

Official information having been received from the Department of State that by Royal Order, published in the Spanish Official Gazette, August 20, 1881, the port of Philadelphia was declared to be infected, in consequence of reports of the prevalence of cholera there, and directing that all vessels arriving at Malaga, which left Philadelphia after July 31, shall be considered foul and be subjected to quarantine, a communication was addressed to the president of the board of health of Philadelphia, asking for information, and the following reply has been received:

HEALTH OFFICE,
Philadelphia, September 24, 1881.

I am directed by the board of health to transmit to you the following copy of resolution passed this date.

Respectfully yours, &c.,

WM. P. TROTH,
Chief Clerk.

T. J. TURNER, *Medical Director, U. S. N.,*
Secretary National Board of Health.

Resolved, That a copy of the communication of the health officer be forwarded to the Secretary of the National Board of Health, in reply to his communication of the 20th instant, to the president of this board.

COMMUNICATION OF THE HEALTH OFFICER.

HEALTH OFFICE,
Philadelphia, September 24, 1881.

SIR: In answer to your inquiry, I have the honor to report that during the current year of 1881 not a single case of cholera has occurred in the city or port of Philadelphia.

Very respectfully,

JOHN E. ADDICKS,
Health Officer.

Gen. HORATIO G. SICKEL,
President Board of Health.

PRIZE ESSAY.

The committee of selection, appointed by the chairman of the section on Practical Medicine, Materia Medica, and Physiology at the recent meeting of the American Medical Association, have selected, and hereby announce, as the subject for the prize to be awarded in 1883, the following question:

What are the special modes of action or therapeutic effects upon the human system of water, quinia, and salicylic acid when used as anti-pyretics in the treatment of disease? The essays must be founded on original experimental and clinical observations, and must be presented to the chairman of the committee of *award* on or before the 1st day of January, 1883.

N. S. DAVIS,
H. D. HOLTON,
W. B. ULRICH,
Committee of Selection.

Annual Report of the Supervising Surgeon-General of the Marine Hospital Service of the United States for the fiscal year 1875. John M. Woodworth, M. D. Washington: Government Printing Office. 1876.

ABSTRACTS FROM REPORTS OF LOCAL BOARDS OF HEALTH.

CHICAGO, ILLS., AUGUST, 1881.

The statement of mortality in Chicago during August gives a total of 1,730 deaths from all causes. Of this number 1,118, or 64.6 per cent., were of children under 5 years of age.

The annual death-rate per 1,000, estimating the population for the middle of the year at 540,000, was 38.44. The deaths from the principal zymotic diseases are stated as follows: Small-pox, 116; measles, 19; scarlatina, 14; diphtheria, 49; croup, 20; whooping-cough, 32; typhus fever, 1; typhoid fever, 98; cerebro-spinal fever, 30; malarial fever, 13; diarrhœal diseases, 517, and other zymotic diseases, 64. The number of deaths from phthisis pulmonalis during the month was 77, and from acute lung diseases 63.

The report for August shows a decrease of 56 deaths from all causes as compared with the statement for July, and an increase of 711 deaths as compared with the corresponding month in 1880.

MOBILE, ALA., JULY, 1881.

The report of Dr. E. H. Fournier, health officer, gives a total of 105 deaths from all causes; whites 52, colored 53. Of the total number, 53, or 50.4 per cent., were of children under 5 years of age. The annual death-rate per 1,000 for the entire population was 40.2. The deaths registered were classified as follows: Zymotic diseases—whites 12, colored 10; constitutional diseases—whites 13, colored 9; local—whites 20, colored 19; developmental—whites 2, colored 1; from violence—whites 5, colored 11. The mortality during July showed a decrease of 6 as compared with the preceding month and an increase of 42 as compared with the corresponding period in 1880.

NASHVILLE, TENN., AUGUST, 1881.

Dr. Richard Cheatham, health officer and registrar, furnishes the mortality report for August, giving a total of 85 deaths from all causes: whites 50, colored 35. Population: White, 27,770; colored, 15,230. Annual death-rate per 1,000, white 21.50, colored 27.30, and for the entire population 23.80. The annual death-rate for the whole population during July was 30.80, and for August, 1880, it was 27 per 1,000. The registration of births was commenced June 1, in pursuance of an ordinance passed by the city council, and is progressing satisfactorily. The returns in August were, white—males 25, females 32; total 57. Colored—males 9, females 7; total 16.

NEW HAVEN, CONN., AUGUST, 1881.

The report of the board of health, Dr. C. A. Lindsley, health officer, for the month of August gives a total of 99 deaths. Population estimated for the middle of the year 66,000. Annual death-rate per 1,000, 18. Among the deaths registered there were from scarlatina, 1; diphtheria and croup, 3; malarial fever, 3; typhoid fever, 1; typho-malarial fever, 1; diarrhœal diseases, 26; phthisis pulmonalis, 11; and from diseases of the brain and nervous system 18. Deaths under 5 years of age, 38.

NORFOLK, VA., AUGUST, 1881.

Dr. James D. Galt, health officer, transmits the mortality report for August. The total number of deaths registered was 75; white, 26; colored, 49. The estimated population is, white, 14,900; colored, 11,300. Annual death-rate per 1,000—white, 20.9; colored, 52. Of the total number of deaths, 50, or 66.6 per cent., were of children under 5 years of age—white, 14; colored 36.

PROVIDENCE, R. I., AUGUST, 1881.

The mortality report for August, furnished by Dr. E. M. Snow, city registrar, gives a total of 224 deaths during the month, an increase of 28 over the preceding month and 50 more than in August, 1880. The population of the city is now estimated at 106,000 as against 104,857 in 1880, and the annual death-rate per 1,000 during the period embraced in the report was 25.36.

Allowing for the increase of population claimed, the mortality during the eight months of 1881, January to August, inclusive, exceeds slightly that of the corresponding period in 1880, the annual death-rate per 1,000 for the first eight months in 1880 being 21.12, and for the same period in 1881, 21.27.

Among the deaths registered there were from consumption, 36; pneumonia, 5; diphtheria, 11; whooping-cough, 12; diarrhœa, 14;

dysentery, 3, and typhoid fever, 3. Of the total number of deaths, 102, or 15.54 per cent., were of children under 5 years of age.

SCRANTON, PA., AUGUST, 1881.

The report of the health department for August, received from Dr. T. P. O'Malley, secretary, gives a total of 65 deaths during the month, being an increase of 32 as compared with the mortality during the preceding, and 17 more than occurred in August, 1880. The causes of death are reported as follows: From zymotic diseases, 28; constitutional diseases, 7; local diseases, 18; developmental diseases, 6, and from violence, 6. Of these there were from diphtheria, 2; typhoid fever, 4; diarrhœal diseases, 22; phthisis pulmonalis, 1; pneumonia, 2, and sunstroke, 1. The number of deaths under 5 years of age was 33, being 50.5 per cent. of the total number of deaths reported.

SAINT PAUL, MINN., AUGUST, 1881.

C. A. Wheaton, jr., health officer, furnishes the following mortality report for August: Total number of deaths, 155, of which there were from diphtheria, 17; dysentery, 4; cerebro-spinal meningitis, 2; consumption, 4; pneumonia, 5, and typhoid fever, 10.

The deaths among children under 5 years of age numbered 92, or 60 per cent. of the total mortality. The annual death-rate per 1,000 of the population was 39.6.

ABSTRACTS FROM CONSULAR REPORTS.

AMOY, CHINA.—United States Consul W. E. Goldsborough reports, under date of August 27, that cholera prevails to some extent among the native population, and that the city is in bad sanitary condition. He also states that the appearance of cholera during the summer months is not an unusual occurrence.

AMSTERDAM, NETHERLANDS.—United States Consul D. Eckstein reports that 5 cases of small-pox, one of which resulted fatally, occurred during the week ending September 10. There were also 3 deaths from typhoid fever, and 8 from other contagions or infectious diseases.

ANTWERP, BELGIUM.—United States Consul John H. Stenart reports that during the two weeks ending September 3 there were 87 cases of typhoid fever in Antwerp, 10 of which were fatal. There were also 12 cases of small-pox, and 4 deaths.

ASPINWALL.—James Thorington, United States consul, reports, September 24, that there were but 8 deaths during the week ending on that day, and that the city is free from contagions or infectious diseases.

BERLIN, PRUSSIA.—United States Consul-General Mark S. Brewer reports 117 cases of typhoid fever during the two weeks ending September 3. The number of deaths from this disease during that period was 28. The total number of deaths from all causes during the two weeks covered by the report was 1,163, giving an annual death rate of 26.9 per 1,000 of the population.

BOMBAY, INDIA.—United States Consul B. F. Farnham transmits reports from August 2 to 23, inclusive. During this period the mortality from cholera has been steadily increasing in the city, ranging from 8 during the week ending August 9 to 22 during the week ending August 23. It also continues to cause a great number of deaths in two large divisions of the presidency, namely, Guzerat, between Ahmedabad and Surat, and the Deccan districts of Kandeish, Ahmednagar, Sholapur, and Poona. In the weekly statement, published August 23, 1,020 deaths from cholera are reported from different districts. In Kandeish cholera prevailed in fourteen talukas. During the week there were 962 cases and 371 deaths; in the Sholapur collectorate, 439 cases and 217 deaths; in the Ahmednagar district, 509 cases and 192 deaths and in Surat (five talukas) 212 cases and 108 deaths. In Baroda City there were 85 cases and 14 deaths: Ahmedabad, 26 cases and 14 deaths, and in the Haveli and Bhimthadi talukas, 33 deaths. The secretary for Berar reports that cholera has appeared in all the Buldana talukas, also in Akola, Bálapur, Kamgaon, Bassein, and in one village of the Amraoti district, leaving but the district of Wuse free from the scourge. Cattle disease also prevails in the six districts.

BORDEAUX, FRANCE.—George W. Roosevelt, United States consul, reports that there were 56 deaths from small-pox, 80 from consumption, 19 from acute lung disease, and 19 from croup during the month of August last. The total number of deaths from all causes during the month was 553, giving an annual death rate of 30.9 per 1,000 of inhabitants.

CALCUTTA, INDIA.—C. C. Bancroft, acting vice-consul-general, reports 10 deaths from cholera during the week ending August 13. The total number of deaths reported during this week was 212, giving an annual death rate of 25.7 per 1,000 of the population.

CHINKIANG, CHINA.—United States Consul E. J. Smithers writes, under date of August 29, that typhus and typhoid fevers have been very prevalent among the native population during the present summer. In the absence of the official records no information can be given relative to the number of deaths, though it is believed that about 70 per cent. of the cases prove fatal.

CIENFUEGOS, CUBA.—William P. Prince, United States consul, writes, under date of September 22, that ten cases of yellow fever have occurred since August 18. The Norwegian brig Swift, bound for New York, had five cases on board, two of which proved fatal, the master and one seaman dying from the disease.

DEMERARA, BRITISH GUIANA.—United States Consul P. Figyelmesy reports, under date of September 2, that yellow fever still prevails, and although he has applied to the authorities he has been unable to obtain any official information concerning the number of cases of deaths from the disease. He states that of his personal knowledge there have been eleven cases in the hospital and city since his report of August 20, of which number three died, the cases which proved fatal being in the immediate vicinity of the consular office. The cases that have occurred have been chiefly among Europeans recently arrived in the district, and the local board of health as well as the citizens are becoming greatly alarmed, and are urging the government authorities to adopt every measure possible to prevent the spread of the disease.

GIBRALTAR.—Horatio S. Sprague, United States consul, reports, under date of September 14, that in consequence of the outbreak of sporadic cases of cholera at Aden, Arabia, the sanitary board of Gibraltar has ordered that all vessels from Aden and ports of the Red Sea shall remain in quarantine three days for the purpose of observation.

LONDON, ENGLAND.—United States vice-consul-general transmits the mortality report for the week ending September 10. The total number of deaths registered during the week was 1,229, giving an annual death rate of 16.7 per 1,000 of the population. Among the deaths reported there were from small-pox, 27; measles, 27; scarlet fever, 48; diphtheria, 14; whooping cough, 29; typhus fever, 2; typhoid fever, 10; diarrhœa and dysentery, 41. The total number of deaths from these diseases was 128 below the corrected average number in the corresponding week of the last ten years.

LYONS, FRANCE.—B. F. Peixotto, United States consul, reports 85 deaths from typhoid fever during the five weeks ending September 3, the disease prevailing chiefly among the military and poorer classes in the city.

PORT AU PRINCE, HAYTI.—John B. Terres, United States vice-consul general, writes, under date of September 10, that on the 8th permission was granted to the British brig Sienna to proceed to the wharf and discharge her cargo, there being no cases of fever now on board. The health of the city, port, and shipping continues good.

NOTE.—This vessel was reported as having arrived in the outer harbor September 1 from Wilmington, N. C., with yellow fever on board, two of the crew having died on the passage.

PRAGUE, BOHEMIA.—United States Consul C. A. Phelps reports a total of 138 deaths during the week ending August 13. Of this number 35, or 25.3 per cent., died of consumption. The annual death rate per 1,000 of population was 27.5.

RIO JANEIRO, BRAZIL.—The report for the week ending August 27, received from United States Consul Thomas Adamson, gives a total of 188 deaths from all causes. Among the deaths reported there were 2 from small-pox, 4 from pernicious fever, and 38 from consumption. But one death from yellow fever had occurred during twenty days immediately preceding the date of the report.

ST. THOMAS, DANISH WEST INDIES.—United States Consul V. V. Smith transmits reports from August 12 to September 9. During the week ending August 26 there were 5 cases and 3 deaths from yellow fever in lazaretto. Three of these cases were of seamen from the American bark Templer, of Philadelphia. One proved fatal and two have recovered and have been discharged from hospital. There are now no cases of yellow fever in the town, among the shipping, or in the lazaretto.

NATIONAL BOARD OF HEALTH rooms, 1410 G st., N. W.

REPORT OF MORTALITY IN CITIES OF THE UNITED STATES FOR THE WEEK ENDING SEPTEMBER 24, 1881.

States.	Cities.	Total population according to the United States Census of 1880.	Total number of deaths. REPORTS OF CORRESPONDENTS OF THE NATIONAL BOARD OF HEALTH.

BROOKLINE, MASS.—Dr. G. K. Sabine reports, under date of September 24, that typhoid fever has prevailed in Brookline for four weeks, but it is confined to the low grounds. Four deaths from this disease were reported during the week.

BUFFALO, N. Y.—Dr. J. W. Keene reports for the health officer, September 24, that dysentery prevails as an epidemic, 19 deaths having occurred from this disease during the week. The total number of deaths registered during the week ending September 24 was 107, of which number there were from diarrhœal diseases, 38; diphtheria and croup, 8; phthisis pulmonalis, 9; fevers, 6, and acute lung diseases, 4.

CHICAGO, ILL.—Dr. M. K. Gleason, registrar, reports 26 deaths from small-pox during the week ending September 24.

PITTSBURGH, PA.—Dr. W. Snively, health officer, reports the continued prevalence of small-pox. Seventeen cases were reported during the week ending September 24.

WEBSTER, MASS.—Dr. F. A. Bosworth, registrar, writes, under date of September 24, that there has been a large increase in the sickness and mortality during the past ten days.

HAVANA, CUBA.—Advices from Havana state that there were 18 deaths from yellow fever and 6 from pernicious fever during the week ending September 23. Of the deaths from yellow fever, 9 occurred among citizens and sailors on merchant vessels. But one death from small-pox was reported during the week. In the week ending September 30 there were 17 deaths from yellow fever, chiefly of civilians. The total number of deaths, during the month of September, from yellow fever was 98, and from pernicious fever, 17.

KEY WEST, FLA.—Advices from Key West, under date of September 21, state that another case of yellow fever has been reported, the patient being a child aged 10 years, and unacclimated. At 8 p. m., on the 24th, it was suffering from black vomit. No other cases were known to exist at the date of the report, but fears were entertained that others would occur.

The following reports for the week ending September 24 are from places which do not require burial permits:

Allegheny, Pa., 79,000; deaths, 22; under 5 years, 10; consumption, 1, diarrhœal diseases, 2, diphtheria, 4, typhoid fever, 3, scarlet fever, 1, pneumonia, 1, small-pox, 2. Belfast, Me., 5,308; deaths, 3; under 5 years, 1; diarrhœal diseases, 1. Bath, Me., 7,875; no deaths. Bucyrus, O., 3,950; death, 1. Brattleboro', Vt., 6,000; deaths, 4; consumption, 1. Columbus, Ga., 6,272; deaths 5; under 5 years, 2; typhoid, 1. Carrollton, Miss., 600; death, 1; under 5 years, 1; malarial fever, 1. Crystal Springs, Miss., 955; no deaths. Corinth, Miss., 2,264; deaths, 2; under 5 years, 1; consumption, 1. Clinton, Mich., 1,200; death, 1; diarrhœal diseases, 1. Calais, Me., 6,172; deaths, 5; under 5 years, 3; consumption, 1, whooping cough, 3. Decatur, Miss., 1,000; deaths, 1; under 5 years, 1; diarrhœal

National Board of Health

BULLETIN.

VOL. 3.] WASHINGTON, D. C., SATURDAY, OCTOBER 15, 1881. [No. 16.

[Continued from BULLETIN No. 15, page 112.]

SKETCH OF THE HISTORY OF QUARANTINE AT PENSACOLA, FLORIDA.

By Dr. R. B. S. HARGIS.

1877.—Not being able to obtain anything relating to quarantine for this year amongst the wreck of records in the city archives, I addressed a letter of inquiry to Dr. T. M. Leonard, now in charge of the quarantine station, and the following is his reply:

Relative to the year 1877 I have no exact data, as the records I then had have all been turned over to the city authorities. I know, though, that I was appointed quarantine physician and assumed charge May 1, and that quarantine was raised November 10. During that time, a period of six months and ten days, about 200 vessels entered or called here (quarantine station), 50 of which were held for discharging ballast, fumigation, &c. The above figures are as accurate as I can guess. During that year I am *sure* no vessel that either called or was held here had had any infectious disease on board, and not a serious case of sickness was at the station. I presume, of the 50 held here, 10 or thereabouts were from ports where yellow fever was prevailing.

On the 15th of May, 1878, the usual time for quarantine to go into effect, Dr. F. G. Renshaw was appointed medical officer at the station for that year. His official reports may be summed up as follows: During his term of service, which ended by resignation on the 20th of August, 74 vessels arrived, of which one vessel only was infected, and having yellow fever among the crew. This was the schooner Agnes T. Grace, from Key West. She was disinfected by sulphurous-acid gas by burning sulphur, and admitted to pratique after twenty days' detention. Dr. T. M. Leonard succeeded Dr. Renshaw on the day following the former's resignation and continued in office until the quarantine was raised in November. No infected vessels arrived during his service, the remainder of the season.

In 1879 Dr. T. M. Leonard again accepted the appointment of quarantine physician, and entered upon duty at the opening of quarantine on the 15th of May. There were many arrivals from infected ports with clean bills of health, but only two were infected and had sickness on board; both were from Rio de Janeiro.

The first was the bark Zelicka. She entered May 6. On her voyage several were sickened with yellow fever, two dying—her master and a seaman; both died at sea. The second was the bark Mary Fry. She arrived here July 1; whilst at Rio had no sickness; sailed from that port April 28, 1879. Sixteen days after her departure, May 13, yellow fever appeared on board; had eleven sick, three of whom died. On her voyage here she put into Barbadoes for medical relief and was held at that island in quarantine sixteen days. One death was May 16, the second the 29th, and the third June 17.

1880.—Dr. Leonard in his official report says:

This year 4 vessels arrived that had been infected. The first was the bark Emelie. She reached the station May 25 from Rio; had yellow fever among her crew at that port, two dying; the master ill on the voyage. The second was the bark Concordia, also from Rio; arrived here June 6; at Rio had ten sick, and one death from yellow fever. The third was the ship Aimo; arrived June 23, from Santos; had at that port five sick and one death. The fourth was the bark Macedonia; left at port of departure (Bahia) two of her crew sick with yellow fever.

Remarks.

From the foregoing sketch of the history of quarantine, it is easy to infer that rational preventive measures consist in naval hygiene, a rigid quarantine, the use of disinfectants, and municipal sanitation; but the latter is important, in so far as relates to yellow fever, only in the destruction of the morbific principle, originally from a foreign source, that may lie in a dormant state, ready, as it were, to develop under favorable conditions referable in part to the constitution of the atmosphere, of which we know very little. I believe that Havana, Vera Cruz, Rio de Janeiro, and many other places supposed to be the *habitat* of yellow fever, may be cleansed of every particle of the infectious principle of that or any other spreading disease by means known to sanitarians. We know how to clean, how to disinfect, and how to drain. If one house in a populous city can be disinfected, as we have known to be the case in numerous instances, and purified, so can another adjacent, and the next, and another contiguous, and so on throughout a whole city, however populous. This can be done by legislative enactment, and enforcement of judicious municipal laws, with the co-operation of an enlightened and earnest people.

The same principles may be applied to shipping, which is the more important—that is, relating to yellow fever, because it is the very source of *the evil*. Abundant evidences are shown indicative of the truth of this proposition in this brief sketch, and I need not refer to only one single instance to *prove* that yellow fever does originate *sua sponti* on ships which traverse the tropical seas. The store-ship Relief may be cited, and which is the archetype of numerous instances on record. But notwithstanding the disease eventually broke out on board the Relief from local sources of infection within the vessel itself after thirteen months' anchorage off Ship Island, it is assumed by Dr. Gibbs that the origin of that epidemic, alluding to the Relief, was an imported germ in all probability transferred to the store-ship in freight from blockade-runners, &c. Why, I ask, in the name of common sense, if the abundance of organic matter in that ship confined in a close, dark, damp cavity, excluded from light and fresh air, environed by a high temperature, was not enough to generate a deadly poison independently of any foreign element?

This hypothesis of a *contagium virum* cannot be admitted in the argument, in the present state of our knowledge, in accordance with philosophical principles. It is a fundamental principle in philosophy that no suppositions or assumptions can be accepted as having any weight in the investigation of truth. In all philosophical discussions known facts and principles should alone be accepted, and they should not be multiplied without necessity. The dormant genus supposed to have existed is merely a gratuitous assumption, and the principle involved as the *primum mobile* of development has no proof of existence.

If the germ theory be true, the outbreak of yellow fever on the Relief might be rationally attributed to organisms originally innocuous, but, under the peculiar favoring circumstances existing in the ship, containing a poisonous pabulum, though foreign to the actual habitat of the germs, was not hostile to their genetic processes, imparted to them noxious principles of a specific character. Here the primitive origin of yellow fever, and its subsequent spontaneous outbreak on ships sailing within the calm belts of the tropical Atlantic or under the tropics in the Caribbean Sea, could not be denied without falsifying history, and without violence to a legitimate process of ratiocination.

I have argued elsewhere,* and which may be seen now in print, "for the sake of argument," in accord with the views of Pasteur, Nägili, and other scientific chemists and microscopists,† that disease germs, so called, undergo transformation, and they remain stable only under identical circumstances. Their differences result from the variableness of the transformations of these organisms according to the *pabulum* in which they live. Nägili, speaking of the mushrooms existing in sewer waters, and to which he ascribes the cause of some zymotic diseases, says "these organisms are not the mushrooms of the first generation, but the mushrooms which are derived from them, and which are generated through putrefaction." I need not ask again, why may not the mushrooms or other organisms contained in the bilge water of a sailing-vessel, built north of 40° north latitude, plying for a time in waters north of 32°, exist in her hold *as the first generation*, for an indefinite time, and when the circumstances of their existence are changed by traversing the calm belts of the tropical Atlantic, living and multiplying in a pabulum which has undergone change by a process of *putrefaction*, undergo a transformation, and as different sicknesses, according to Nägili, "have not always for their starting point different kinds of mushrooms," these organisms may be metamorphosed, not only within physical structure, but changed in their qualities from innoxious little creatures to noxious, death-dealing organisms? I ask, why not? I offer a theory, not a hypothesis; and the theory is not only just, but complete.

There is too much involved in this discussion to hazard conclusions from premises founded only on analogy.

Public Health Reports and Papers, vol. v., presented at the meetings of the American Public Health Association, in the year 1879. Pp. 190.

† The late utterances of Professor Pasteur before the International Congress, which held a session in London last August, while confirming, indirectly, his views relating to the transformation of germs, have, in my opinion, not a feather's weight more force than any of his former declarations. The views of H. Buckner and Professor Fokker, of Gottingen, while conflicting with Pasteur's in reference particularly to the relations of the *bacillus anthracis* and *bacillus subtilis* to varieties of malignant anthracoid diseases, are more logical, better illustrated, and more scientific than any he, Pasteur, and his contemporary followers ever promulgated. Kohn, before the Academy of Sciences, expressed the opinion that charbon is not due to a bacterium, but to a special virus. I make these notes simply to suggest that we who have to do more with facts, as we acquire them, and logic, than with experimentation, should be careful of our conclusions. Magnin, in his late "admirable *resume*" [The Bacteria, by Dr. Antoine Magnin, translated by George M. Sternberg, M.D., surgeon U. S. Army] of our knowledge of the *Bacteria*," says, in the last paragraph (7) of his "conclusions": "As to their [the Bacteria] *rôle* in fermentations, in putrefactions, in contagious diseases, and in surgical lesions, notwithstanding the considerable number of labors of which the *bacteria* have been the object in these different points of view, *it is not yet possible to define it in a certain manner*." The italics are mine.

1. "The candid statement made in the last paragraph, by a *savant*, who has shown himself so familiar with the whole subject, and by a Frenchman, who evidently has a high regard for his distinguished countryman, Pasteur, shows us that there is still much to be done in the way of careful and conscientious work in the study of the life histories and physiological functions of the micro-organisms known under the general name of *bacteria*."—G. M. S.

In conclusion, I repeat my conviction that by preventive measures based on the theory of the ship origin of yellow fe ver, that terrible destroyer of human life, commercial prosperity, and social order, may in time, sooner or later, be rendered extinct.

APPENDIX.

Land quarantine.

I inadvertently omitted to mention in the body of the preceding composition in chronological order the instances in which land quarantine was instituted and enforced. The first of which any knowledge can be obtained that has not already been alluded to was established at the junction of the Louisville and Pensacola Railroad with Mobile and Montgomery Railroad, in consequence of a report of the existence of yellow fever in Mobile. Dr. H. N. Blount was appointed to act in the premises with plenary powers under advisement of the board of health. In 1875, under similar circumstances, quarantine was established and conducted in the same way by an officer under the direction of the city physician.

In 1878, it having been officially reported that yellow fever had invaded New Orleans, quarantine was again established at the junction of the Mobile and Pensacola Railroad, and Dr. T. M. Leonard, then city physician, was empowered by city authorities to enforce restrictions on passengers and certain kinds of freight. A few days previous to the announcement of the existence of yellow fever in New Orleans, there was, on the 10th of June, an excursion by rail from Pensacola to New Orleans; a party numbering 110 participated, and, in consequence of the report of yellow fever being in New Orleans, before their return they were ordered by the city authorities to be quarantined at Williams's Station, 33 miles from Pensacola, for ten days. Dr. Leonard was ordered to remain at that place until it should be considered no longer necessary, and says in his official report that "No sickness occurred amongst the excursionists. I simply had their soiled clothes washed and the remainder of their clothing well aired." No evil results followed the exposure of these excursionists to the "yellow fever atmosphere" of New Orleans.

By authority from the board of health a volunteer guard was stretched from Bayou Texar to Bayou Chico, whose duties were to stop all suspicious characters or persons, and such as were suspected turned back, or kept under strict surveillance. Pensacola was also protected this year from the intrusion of yellow fever by a guard stationed at Millview, situated 9 miles northwest of Pensacola, on the eastern shore of Perdido Bay, and is the terminus of the Pensacola and Perdido Railroad. This guard was under the direction of Capt. J. B. Johnson, chief officer of the village. Yellow fever prevailed fatally on the western shores of Perdido Bay, 25 miles distant from Millview. By the vigilance and activity of Captain Johnson, Pensacola, as well as Millview, was saved a visitation of the scourge from that direction.

Preventive measures: Temporary quarantine.—On looking over my notes connected with the history of yellow fever at Pensacola, I find that reference is made incidentally to measures taken by the mayor of the city of Pensacola in 1843 to prevent the introduction of yellow fever from the French steam frigate Gomer, then at anchor in the harbor of Pensacola, infected with that disease. The Gomer had lately arrived from a cruise among the West India islands, and reference is made to the annual report of the supervising surgeon of the marine hospital service of the United States for the year 1874, in which appears (pp. 211) an interesting letter of Dr. James S. Herron to Dr. John M. Woodworth, from which it may be seen that measures were taken in 1843 to prevent the introduction of yellow fever into Pensacola from the Gomer by a formal action of the city authorities instituting a temporary quarantine against that vessel. The papers relating to this transaction are nowhere in the archives of the city to be found, and nothing is even hinted regarding a quarantine against the Gomer by Dr. S. P. Moore, U. S. A., in his report to the surgeon-general, printed in the Medical Statistics of the United States Army, 1839–'54, pp. 356.

CITY OF PENSACOLA, ALDERMEN'S OFFICE.

Whereas it has been represented to the mayor and board of aldermen that since their last meeting, which was called by his honor the mayor, to take into consideration what steps would be necessary to be taken to prevent the introduction of the yellow fever into this city, it having been communicated to his honor that some cases had occurred on board of the French steam frigate Gomer, now lying at anchor in the bay; and whereas it has been reported by the health-officer that the number of cases have increased:

Be it therefore resolved, That his honor the mayor cause the said steam frigate to be removed from her present station as near to the land on the opposite side of the bay as can be done with safety to her.

Be it further resolved, That none of the officers or men, nor any article of clothing, or anything else belonging to said frigate, be landed, nor shall any of their dead be buried within the limits of the city until the further order of the mayor and board of aldermen of said city.

FCO. MORENO,
President pro tempore.

Passed August 12, 1843.
Approved August 12, 1843.

C. EVANS, *Mayor.*

MAYORALTY OF PENSACOLA, *August* 13, 1843.

SIR: In consequence of the sickness on board of His Majesty's steam frigate Gomer having assumed a different aspect to that which was reasonably expected when I communicated with Commodore Reynard, on the 9th instant, the city authorities, at the earnest solicitation of the citizens, have deemed it prudent to establish a rigid quarantine from and after this date. So much of their resolutions and acts as relate to the said steam frigate Gomer are herewith annexed. A strict compliance therewith is expected without any unnecessary delay. All vessels arriving in future will be subjected to the same restrictions and regulations.

You will be pleased to communicate this, together with the indorsed resolutions, to Commodore Reynard forthwith.

With sentiments of esteem, I have the honor to be, sir, respectfully, your obedient servant,

C. EVANS, *Mayor.*

JOHN INNERARITY, Esq.,
His Majesty's Vice-Consul.

STATE BOARD OF HEALTH OF NEW HAMPSHIRE.

The personnel of the State board of health of New Hampshire as now organized is as follows:

Governor Charles H. Bell, Attorney-General Mason W. Tappan, Granville P. Conn, M. D., President; Carl H. Horsch, M. D., Irving A. Watson, M. D., Secretary. The office of the board is at the Statehouse, Concord, N. H.

REPORTS OF STATE AND LOCAL BOARDS OF HEALTH.

STATE BOARD OF HEALTH OF CONNECTICUT, AUGUST, 1881.

Dr. C. W. Chamberlain, secretary of the State board of health, furnishes the following report of mortality during the month of August:

	Hartford.	New Haven.	New Britain.	Meriden.	Bridgeport.	Norwich.	New London.	Waterbury.	Willimantic.	Killingly.
Zymotics	44	26	15	12	14	11	....	10	....	4
Infantile	46	38	13	15	11	10	....	12	....	3
Nervous system	10	18	....	6	....	....	....	3	....	1
Heart diseases	3	2	....	1	....	....	....	....	....	1
Diphtheria and croup	3	3	....	....	5	....	1	1	3	....
Scarlet fever	1	1	....	....	....	2	....	1	....	....
Typhoid fever	2	1	....	3	2	....	....	1	1	1
Typhoid malarial fever	....	1	....	3	....	1	....	....	....	....
Malaria fever	3	3	2	....	....	1	....	....	....	....
Cholera infantum	27	11	13	6	6	5	....	5	3	3
Diarrhœa and dysentery	5	4	....	5	2	2	1	....	....	....
Consumption	12	11	2	....	4	9	3	7	1	1
Acute lung diseases	3	2	1	....	....	1	1	....	....	....
Cerebro-spinal meningitis	....	....	....	....	1	....	....	....	....	....
Whooping-cough	2	....	....	....	....	....	....	....	....	....
Accident and violence	4	6	....	....	....	2	....	2	....	1
In public institutions	13	9	....	....	....	....	....	....	....	....
Total mortality	102	99	24	34	36	40	24	31	8	8
Monthly rate	24	16	19	19	13	20	20	16	10	14

There has been a marked increase in the number of cases of disease reported, and also in the mortality, during the month, as compared with the corresponding period in the past two years. The total number of deaths reported from ten principal towns was 406, ranging from 8 in Killingly and Willimantic to 102 in Hartford, with a death-rate for the month ranging from 10 in Willimantic to 24 in Hartford.

In reviewing the causes of death, the secretary states that the number of diseases reported with malarial complications increases steadily. This was quite marked in the mortality returns for 1880, and has been a marked feature in reports since. In some regions it would seem that nearly all diseases were of a malarial type. Of the distinct malarial diseases typho-malarial fever has increased most steadily. In many places deaths are reported as from malarial fever without designating the variety.

But one fatal case of small-pox was reported during the month. This case was isolated by the authorities and all unprotected persons who had been exposed were vaccinated. No new cases have thus far resulted from the first. Cases of the disease, however, have occurred in other portions of the State, and the instructions of the State board of health have been followed in all places where any cases have appeared. Scarlet fever of mild type has been prevalent in Derby and Willington. Diarrhœa and dysentery of unusual frequency and severity are reported from Fairfield, several cases having occurred in one family from the use of impure water. Typhoid fever has appeared rather earlier than usual, and deaths from this disease are reported from many parts of the State. Cases of diphtheria are also of frequent occurrence. In Naugatuck four cases occurred in one family, the cause being attributed to bad drainage.

The prolonged drought which has prevailed throughout the State is regarded as a probable cause of the wide-spread sickness and increased mortality, especially among children, the death-rate of those under five years of age being largely in excess of that of previous month.

STATE BOARD OF HEALTH OF MASSACHUSETTS.

Dr. H. P. Walcott, health officer, furnishes the following report of mortality in 40 cities and towns in Massachusetts during the week ending October 1, 1881.

Cities and towns.	Population by census of 1880.	Reported deaths in each.	Deaths under 5 years.	Deaths from principal zymotic diseases.	Deaths from diarrhœal diseases.	Deaths from typhoid fever.	Deaths from lung diseases.
Boston	362,535	196	74	59	25	19	12
Lowell	59,485	28	18	8	2	1	1
Worcester	58,295	25	13	11	5	3	3
Cambridge	52,740	21	7	8	5	.....	3
Fall River	49,006	36	19	8	4	2	2
Lynn	38,284	15	5	3	1	1	1
Springfield	33,340	13	4	3	3	.....	1
Salem	27,598	11	4	2	1	1	2
New Bedford	26,875	11	3	3	1	2	1
Somerville	24,985	7	3	1	.....	.....	.....
Holyoke	21,851	15	5	8	3	2	2
Chelsea	21,785	7	4	2	1	.....	.....
Taunton	21,213	12	3	2	1	.....	1

Total	1,046,394	474	189	137	61	35	31

Reported deaths from prevalent diseases in the 40 cities and towns: One hundred and thirty-seven deaths were reported from the principal "zymotic" diseases. Diarrhœal diseases, 61; typhoid fever, 35; diphtheria and croup, 21; cerebro-spinal meningitis, 7; whooping-cough, 5; scarlet fever, 3; puerperal fever, 3; erysipelas, 1; malarial fever, 1.

No deaths were reported from small-pox or measles. There were 77 deaths from consumption and 31 from lung diseases.

From diphtheria and croup there were 8 deaths in Boston, 3 each in Lowell and Cambridge, 2 in Webster, 1 each in Somerville, Holyoke, Taunton, Gloucester, and Newton. From cerebro-spinal meningitis, Worcester and Fall River 2, Boston, Chelsea, and Clinton 1. From whooping-cough, Boston 3, Lynn and Malden 1. From scarlet fever, Boston, Lowell, and Worcester 1. From puerperal fever, Boston 2, Lowell 1. From erysipelas, Holyoke 1. From malarial fever, Holyoke 1.

The deaths from the principal "zymotic" diseases numbered 137, as compared with 153 for the previous week. Deaths under five years 189, against 173.

There was some increase in the mortality from typhoid fever, consumption, and lung diseases; and a decrease in that from diarrhœal diseases, diphtheria, and puerperal fever; no noteworthy changes in the other diseases. Typhoid fever still continues confined to the low grounds in Brookline.

Death rates for the week: Boston, 28.18; Lowell, 24.56; Worcester, 22.35; Cambridge, 20.77; Fall River, 38.30; Lynn, 20.43; Springfield, 20.33; Salem, 20.78; New Bedford, 21.34; Somerville, 14.61; Holyoke, 35.79; Chelsea, 16.76; Taunton, 29.50; Gloucester, 26.98; Haverhill, 11.29; Newton, 15.31; Newburyport, 19.26; Fitchburg, 4.20.

The total death-rate for the week was 21.98, against 22.99 and 22.65 for the previous two weeks.

DISTRICT OF COLUMBIA, AUGUST, 1881.

Dr. Smith Townshend, health officer, reports that the total number of deaths registered in the District of Columbia during the month of August was 434, being a decrease of 47 as compared with the number reported last month. Compared with the number of deaths registered in August, 1880, there was an increase of 109, and an increase of 34 as compared with the average for the month in the past seven years. The annual death-rate per 1,000, based upon a population of 180,000, was 28.93, against 21.37 in August, 1880. It was also slightly in excess of the average rate for the month in the past seven years. The annual death-rate among the white population was 20.07 per 1,000, and among the colored, 42.90. Of the total number of deaths reported, 191 (white 86, colored 105) were referred to zymotic diseases; 82 (white 39, colored 43) to constitutional diseases; 109 (white 59, colored 50) to local diseases; 36 (white 18, colored 18) to developmental diseases; 16 (white 6, colored 10) were caused by violence. Of the zymotic diseases, 1 death occurred from scarlet fever, 8 from diphtheria, white 4, colored 4; 17 from typhoid fever, white 10, colored 7; 22 from malarial fever, white 10, colored 12; 117 from diarrhœal diseases, white 53, colored 64. From phthisis pulmonalis there were 56 deaths, white 24, colored 32. Of the total number of deaths, 202, or 50.7 per cent., were of children under 5 of age.

MEMPHIS, TENN., SEPTEMBER, 1881.

The report of the board of health for the month of September gives a total of 122 deaths from all causes, white 52, colored 70; annual death-rate per 1,000, whites 32.96, colored 56.10. Of the deaths reported there were from congestive chill 2, white 1, colored 1; diphtheria 6, white 5, colored 1; diarrhœal diseases 23, white 6, colored 17; fevers 17, white 11, colored 6. Deaths under 5 years, 48; white 17, colored 31. The number of deaths reported last month was largely in excess of the number in the corresponding month of last year, the excess being chiefly in deaths among the colored population. The total number of deaths reported in September, 1880, was 93, white 47, colored 46.

NEW HAVEN, CONN., SEPTEMBER, 1881.

The report of the board of health for September gives a total mortality of 101, being an increase of 33 as compared with the corresponding month in 1880 and 26 in excess of the average for the corresponding month during the past five years. The population is estimated for the middle of the year at 66,000, giving an annual death-rate of 18.3 per 1,000 during last month. The principal causes of death are stated as follows: Diphtheria and croup, 4; malarial fever, 7; typhoid fever, 1; typho-malarial fever, 5; diarrhœal diseases, 19; phthisis pulmonalis, 15; pneumonia, 3; meningitis, 4; diseases of brain and nervous system, 11. Of the deaths reported, 29, or 28.7 per cent., were of children under 5 years of age.

ABSTRACTS FROM CONSULAR REPORTS.

AMSTERDAM, HOLLAND.—D. Eckstein, United States consul, reports a total of 199 deaths during the week ending September 17. Among the deaths reported there were 4 from typhoid fever and 1 from typhus fever. Four cases of small-pox were reported during the week.

ANTWERP, BELGIUM.—United States Consul John H. Stewart transmits reports for the two weeks ending September 17, giving a total of 139 deaths. During this period there were 14 cases of small-pox reported, none of which proved fatal, and 55 cases of typhoid fever, with 7 deaths.

BERLIN, GERMANY.—M. S. Brewer, United States Consul-General, reports 462 deaths during the week ending September 10. Of this number there were 14 from typhoid fever and 63 from other contagious or infectious diseases. There were 76 cases of typhoid fever reported during the week. Consumption and diphtheria are reported as prevailing diseases. The annual death-rate per 1,000 of inhabitants during the period covered by the report was 21.4.

BOMBAY, INDIA.—United States Consul B. F. Farnham transmits reports for the week ending August 30, giving a total of 474 deaths from all causes, of which number 18 were from cholera, being 4 less than were reported last week. Cholera has also broken out among the Europeans in the station of Murree, and a number of deaths have occurred. The total number of deaths in Bombay during the week embraced in the report was 2 less than in the preceding week, 71 more than in the week ending August 31, 1880, and 28 less than the mean of the corresponding period in the past five years. The annual death-rate per 1,000 of the population was 36.7. The deaths registered include 105 from remittent fever, being an increase of 7 over the number in the previous week and a decrease of 39 as compared with the corresponding period in last year. The number of deaths from diseases of the respiratory system was 78; from diarrhœa 19, and from dysentery 18, being a decrease of 38, 12, and 14, respectively, as compared with the same period in 1880.

BRADFORD, ENGLAND.—United States Consul C. O. Shepard forwards the mortality report of Bradford for the week ending September 17, giving a total of 53 deaths from all causes, being an increase of 10 as compared with the number registered in the previous week. The annual death-rate per 1,000 of population was 15 as against 18.1 and 30.8 in the corresponding week in 1879 and 1880. Of the decedents 19 were children under 5 years of age. Under the provision

[Continued from page 121.]

for the compulsory notification of the occurrence of infectious disease, 28 cases, 21 of scarlet fever and 7 of enteric fever, were reported during the week. Under this provision of law, 30 cases of scarlet fever, 8 of enteric fever, and 2 of diphtheria were reported in the previous week. Many of these cases have been removed to hospital. Scarlet fever is very prevalent, and it is believed that but for the law making notification of the appearance of contagious or infectious disease compulsory, and the removal of many of the patients to the fever hospital, a serious epidemic would now be prevailing.

CADIZ, SPAIN.—Ernest L. Oppenheim, United States consul, reports 34 deaths during the week ending September 17, in a population of 65,028. He states that there are no diseases prevailing, and that the city is in good sanitary condition.

CALCUTTA, INDIA.—United States Consul C. C. Bancroft reports a total of 181 deaths during the week ending August 20. Of these there were 18 deaths from cholera, 13 from typhoid fever, 49 from fevers, 26 from diarrhœal diseases, 8 from phthisis pulmonalis, and 24 from tetanus. The annual death-rate per 1,000 of population was 21.9, as compared with 25.7 for the previous week.

CAPE TOWN, CAPE OF GOOD HOPE.—W. W. Edgecomb, United States consul, reports 23 deaths during the week ending September 5, among a population of 35,000. No diseases are reported as prevailing, and the city is in good sanitary condition.

GONAIVES, HAYTI.—Reports received from the acting United States consular agent from June 18 to August 27, inclusive, give a total of 28 deaths from all causes. Population, 6,250; annual death-rate per 1,000, 23.3. The town is free from all contagious or infectious diseases, and in good sanitary condition.

HAVANA, CUBA.—United States Consul-General Henry C. Hall reports 150 deaths from all causes during the week ending September 24. Of this number there were 17 deaths from yellow fever, 1 from small-pox, and 1 from typhoid fever. The annual death-rate per 1,000 of population was 40.0. The city is reported in bad sanitary condition.

JAMESTOWN, ST. HELENA.—United States Consul H. J. Crouch reports that but 4 deaths occurred from August 6 to September 10 in a population estimated at 5,059. No cases of disease of a contagious or infectious character were reported during this period.

LIVERPOOL, ENGLAND.—United States Consul S. B. Packard transmits report for the week ending September 17. The total number of deaths registered during the week was 299, giving an annual death-rate of 28.2 per 1,000 of population. There were 3 cases of small-pox reported and 1 death, 7 cases of typhoid fever and 3 deaths, and 28 cases of typhus fever with 3 deaths.

LONDON, ENGLAND.—J. Nunn, United States consul, furnishes the mortality report for the week ending September 17, giving a total of 1,151 deaths from all causes, which was 251 below the average numbers in the corresponding weeks of the last ten years. The annual death-rate, which had been equal to 16.2 and 16.7 per 1,000 in the two preceding weeks, declined last week to 15.7. The total number of deaths registered during the week included 26 from small-pox, 16 from measles, 51 from scarlet fever, 6 from diphtheria, 22 from whooping-cough, 1 from typhus fever, 21 from enteric fever, 40 from diarrhœa, and 6 from simple cholera; 191 deaths were thus referred to these diseases, being 116 less than the corrected average number in the corresponding week of the last ten years. The fatal cases of diarrhœa, which had steadily declined from 495 to 39 in the seven preceding weeks, were 40 last week, being 106 below the corrected weekly average. The deaths from small-pox, which had been 36, 22, and 27 in the three preceding weeks, were 26 last week, or more than double the corrected weekly average. The number of deaths from diseases of the respiratory organs was 156, being an increase of 25 as compared with the number registered in the preceding week, but 9 below the corrected weekly average.

MAHÉ, SEYCHELLES.—Reports have been received from United States Consul E. P. Mussey from August 6 to September 10, inclusive. The total number of deaths reported during that period was 16, giving an annual death-rate of 11.8 per 1,000 of population. The city is reported to be free from epidemic diseases and in good sanitary condition.

MALTA AND GOZO.—C. B. Eynaud, United States vice-consul, transmits the mortality report for the two weeks ending August 31, giving a total of 216 deaths from all causes during that period. Among the principal causes of death are noted, from zymotic diseases 27, including 14 from diarrhœa, 4 from dysentery, 3 from typhoid fever, and 1 from typhus fever; 24 deaths were referred to constitu-

tional, 108 to local, 54 to developmental diseases, and 3 to violence. Of the total number of deaths, 138, or 63.9 per cent., were of children under 5 years of age. The annual death-rate per 1,000 of population during the last two weeks in August was 32.59, as against 33.66 in the preceding fortnight, and 38.02 in the corresponding period in 1880.

MATAMOROS, MEXICO.—The report received from United States Consul John F. Valls for the week ending October 2 gives a total of 6 deaths from all causes. No cases of disease of a contagious or infectious character were reported during the week.

NASSAU, NEW PROVIDENCE, BAHAMAS.—Thomas J. McLain, jr., United States consul, furnishes reports for the two weeks ending September 10. Official reports of mortality in Nassau are not published, though so far as can be ascertained no cases of contagious or infectious diseases are known to have occurred during the week. The prevailing diseases are a mild form of bilious and intermittent fever incident to the hot and rainy season. The sanitary condition of the town is good, the board of health being active and vigilant in keeping it clean and healthful.

POINTE À PITRE, GUADALOUPE.—Reports received from the United States consul for the week ending September 17 state that there were 11 deaths during the week, none of which were referred to contagious or infectious diseases. Malarial fevers are prevailing, and the city is not in good sanitary condition.

PORT-AU-PRINCE, HAYTI.—John B. Terres, United States consul, reports a total of 32 deaths during the week ending September 20, as against 18 in the preceding week. The deaths reported were referred to the ordinary maladies, no cases of contagious or infectious diseases having occurred during the week. The city is reported to be in fair sanitary condition.

ROSARIO, ARGENTINE REPUBLIC.—M. Amelong, acting United States vice-consul, furnishes reports from July 3 to August 28. During this period there was a total of 175 deaths from all causes among a population estimated at from 30,000 to 35,000. Diphtheria, typhoid fever, pneumonia, and diarrhœal diseases are reported as prevailing. The city is in bad sanitary condition, the drainage being very defective and the water supply both deficient in quantity and poor in quality.

The following reports for the week ending October 1, 1881, are from places which do not require burial permits:

Allegheny, Pa., 79,000; deaths, 29; under 5 years, 11; accidents 1, consumption 2, diarrhœal diseases 2, diphtheria 3, typhoid fever 6, scarlet fever 2, small-pox 2. Bath, Me., 7,875; deaths, 4; under 5 years, 1; consumption 1, diarrhœal diseases 1, typhoid fever 1. Belfast, Me., 5,308; deaths, 5; consumption 1, erysipelas 1, typhoid fever 1. Brattleboro', Vt., 6,000; deaths, 2; under 5 years, 1; accidents 1, diarrhœa 1. Bucyrus, Ohio, 3,950; death, 1; consumption 1. Calais, Me., 6,172; no deaths. Clinton, Mich., 1,577; no deaths. Corinth, Miss., 2,264; death, 1; under 5 years, 1. Crystal Springs, Miss., 955; death, 1; under 5 years, 1. Carrollton, Miss., 600; no deaths. Columbus, Ga., 10,123; deaths, 7; under 5 years, 3; accidents 1, consumption 1, typhoid fever 1, puerperal diseases 1. Cedar Keys, Fla., 1,458; no deaths. Decatur, Miss., 1,000; death, 1; under 5 years, 1; diarrhœa 1. Fayette, Miss., 400; no deaths. Greenville, S. C., 6,159; deaths, 7; under 5 years, 5; accidents 1, diarrhœa 4, diphtheria 1. Gun City, Mo., 200; death, 1. Hernando, Miss., 1,000; no deaths. Huntingdon, Tenn., 1,200; death, 1; diarrhœa 1. Iuka, Miss., 816; no deaths. Indianola, Tex., 900; no deaths. Jefferson, Tex., 3,251; deaths, 2; under 5 years, 2; diarrhœa 2. Kenosha, Wis., 5,500; deaths, 8; under 5 years, 4; consumption 1, diarrhœa 2, congestion of lungs 1, puerperal diseases 1. Louisiana, Mo., 5,000; no deaths. Martinsburg, W. Va., 6,534; deaths, 3; under 5 years, 1; consumption 2, diarrhœa 1. Milledgeville, Ga., 3,000; deaths, 3; under 5 years, 1; diarrhœa 2, puerperal diseases 1. Madison, Ind., 9,009; deaths, 2; under 5 years, 1; accidents 1. Milan, Tenn., 1,800; no deaths. Milford, Mich., 1,400; deaths, 3; malarial fever 1. Muscatine, Iowa, 8,412; deaths, 2; under 5 years, 1; cerebro-spinal meningitis 1, typhoid fever 1. Pleasant Hill, Miss., 253; no deaths. Pass Christian, Miss., 3,500; no deaths. Pearlington, Miss., 1,200; no deaths. Painesville, Ohio, 5,500; deaths, 4; under 5 years, 3; diarrhœa 4. Port Royal, S. C., 750; no deaths. Rensselaer, Ind., 912; no deaths. Senatobia, Miss., 935; death, 1; malarial fever 1. Santa Cruz, Cal., 5,000; no deaths. Starkville, Miss., 1,454; no deaths. Tuscaloosa, Ala., 2,000; deaths, 2; consumption 1. Titusville, Pa., 9,046; deaths, 2; under 5 years, 1. Tampa, Fla., 740; no deaths. Westminster, Md., 2,507; deaths, 2; under 5 years, 1; diphtheria 1. Winchester, Va., 5,000; deaths, 2; under 5 years, 2; diarrhœa 1, scarlet fever 1. Youngstown, Ohio, 15,442; deaths, 8; under 5 years, 5; consumption 1, diarrhœa 3. Total population, 235,102; deaths under 5 years, 46; total number of deaths, 104; annual rate per 1,000, 23.0.

National Board of Health

BULLETIN.

VOL. 3.] WASHINGTON, D. C., SATURDAY, OCTOBER 22, 1881. [No. 17.

THE QUARANTINE AGAINST PHILADELPHIA.

Since the publication of the correspondence relative to the establishment of quarantine at Malaga, Spain, against all vessels from Philadelphia, in consequence of the reported prevalence of cholera there, official information has been received from the Department of State that a similar order has been issued by the Norwegian Department of Justice and Police. A copy of the order issued by the Norwegian Government was at once forwarded to the health officer at Philadelphia, and the following reply has been received:

HEALTH OFFICE,
Philadelphia, October 6, 1881.

SIR: I am in receipt of your communication of the 5th instant, containing a copy of the proclamation of the Department of Justice and Police of Christiana, Norway, declaring quarantine against the port of Philadelphia until further notice, as infected with cholera.

In answer to this statement, I assert that during the current year of 1881 not a single case of cholera has occurred in the city or port of Philadelphia.

Very respectfully, JOHN E. ADDICKS,
Approved. *Health Officer.*
H. G. SICKEL,
President of the Board of Health.

Dr. T. J. TURNER, U. S. N.,
Secretary of the National Board of Health, Washington, D. C.

CHOLERA AT ADEN, ARABIA.

ACTION OF THE INTERNATIONAL SANITARY COUNCIL.

G. H. Heap, United States consul at Constantinople, transmits to the Department of State the following orders adopted at an extraordinary meeting of the International Sanitary Council, with a view of preventing the spread of cholera from Aden. In transmitting these orders the consul states that the latest telegram from Dr. Finestein announces that between the 2d of August and the 10th of September 81 cases of cholera had been reported at Aden, 64 of which proved fatal.

1. To place Aden in quarantine, or to declare quarantine against Aden and the entire Arabian and African coast of the Red Sea south of Hodeeida.
2. The province of Aden will be surrounded by a cordon by land.
3. Camara will be the quarantinary station by sea.
4. Vessels calling at Aden will be directed to report themselves at Hodeeida.
5. All vessels that have not called at Aden, or any Arabian or African port, as above mentioned, will receive a strict medical visit at Djedda.
6. Vessels that have cases of cholera on board will be ordered to a quarantinary station.
7. Vessels that carry pilgrims will be permitted to land their passengers only at Djedda and at no other port.
8. A physician, Dr. Saroup, of Djedda, will be ordered to Hodeeida as inspector of quarantine.
9. At Bassoral the quarantine will be maintained against the province of Aden.

In connection with the above orders, attention is called to the following statements of James S. Williams, United States consul at Aden, who writes to the Department of State under date of September 12, as follows:

Of 78 cases of cholera reported in Aden and vicinity to September 9, 63 proved fatal. Although the disease is announced in the official statements as cholera, considerable diversity of opinion exists among the medical profession as to its real character, some who have had large Indian experience insisting that it is not cholera, claiming that many of the prominent symptoms present in Asiatic cholera are not found in the cases they have treated. Thus far the disease has prevailed only among the coolie laborers, who have been observing the Ramidan fast during the past month. While this fast continues the Mohammedans partake of no food of any description, or even quench thirst, from sunrise to sunset, and afterwards gorge themselves during the night, devouring large quantities of rice, fish, fruit, &c., causing indigestion, cholic, diarrhœa, and what has been called cholera in the published statements. The fast closed August 25, since which time the cases have diminished both in number and severity. The Indian authorities have not considered the matter sufficiently alarming to discontinue issuing clean bills of health to all vessels, and but for the action of the Egyptian Government in imposing a quarantine of fourteen days on all vessels from Aden, while those from India, where cholera is very severe, are admitted to free pratique, I should not have deemed the matter of sufficient importance to warrant a special dispatch.

SAPELO STATION.

Dr. W. H. Elliott, inspector in charge of the refuge station of the National Board of Health on Blackbeard Island, Ga., reports, under date of October 1, that the British barkentine *Caledonia* left the station September 23, and was granted *pratique* immediately on arrival at Brunswick, her port of destination.

The Spanish bark *Manuel* has just been released, and will sail for Brunswick on the arrival of a pilot.

The British steamship *Brinkburn*, from St. Thomas for Savannah, arrived at this station September 27, with four cases of yellow fever on board, having been ordered here by the pilot off Tybee bar on the night of the 26th. The sick were immediately transferred to the hospital, and at this date (October 1) three of the patients are in a fair way of recovery. The fourth case, that of John C. Kaufer, 2d mate, proved fatal. He was attacked September 21, at St. Thomas, and died at this station September 30. The persons on board, twenty-five in number, have continued well. The vessel is being purified as rapidly as possible, the officers and crew working diligently to that end, and unless new cases occur she will be released about the 5th instant.

ABSTRACTS FROM REPORTS OF LOCAL BOARDS OF HEALTH.

CHICAGO, ILL., SEPTEMBER, 1881.

The mortality report for September, furnished by Dr. M. K. Gleason, registrar, gives a total of 1,203 deaths from all causes, being a decrease of 527 in the number of deaths as compared with that of the previous month, and an increase of 526 as compared with the number registered in the corresponding month of last year.

Of the total number of deaths there were 108 from small-pox, 5 from measles, 8 from scarlatina, 56 from diphtheria, 30 from croup, 22 from whooping cough, 5 from typhus fever, 94 from typhoid fever, 11 from cerebro spinal fever, 25 from malarial fever, 193 from diarrhœal diseases, and 36 from other zymotic diseases, thus referring a total of 593 deaths to zymotic diseases.

The number of deaths from phthisis pulmonalis was 78, and from acute lung diseases, 54.

The deaths of children under 5 years of age numbered 625, or 51.9 per cent. of the total number of deaths registered.

The annual death-rate per 1,000 of population was 26.73.

MINNEAPOLIS, MINN., SEPTEMBER, 1881.

Dr. A. H. Salisbury, health officer, furnishes the mortality report for September, giving a total of 129 deaths from all causes, being an increase of 51 as compared with the corresponding month in last year, and a decrease of 13 as compared with the preceding month. Of the total number 68 were referred to zymotic diseases, as follows: Croup, 2; cerebro-spinal fever, 1; scarlet fever, 3; typhoid fever, 41; diphtheria, 8; diarrhœa, 6; cholera infantum, 4; whooping-cough, 3.

There were 8 deaths from consumption, and 6 from acute diseases of the lungs. The annual death-rate from all causes, which was 41.76 in the previous month, declined in September to 30.96. The most

marked decline is found in the number of deaths from zymotic diseases, which fell from 93 to 68. The number of deaths from typhoid fever fell from 46 to 41, and those from diarrhœal diseases from 31 to 11. The deaths from croup and cerebro-spinal fever remained the same as in August, while from scarlet fever the number increased from 1 to 3, and from diphtheria from 6 to 8. The deaths among children under 5 years of age showed a marked decrease, the number falling from 79 to 47. There was also a decrease of 5 in the number of deaths from consumption, and of 1 in the number from acute diseases of the respiratory organs. The meteorological summary for the month, published with the report and furnished the United States Signal Service observer, is as follows: Mean barometer, 28.875; temperature, 58.07; humidity, 80.0; direction of wind, SE.; total rainfall, 9.635 inches. The summary for August was as follows: Barometer, 28.949; temperature, 72.27; humidity, 75.3; direction of wind, NE.; total rainfall, 4 inches.

Nashville, Tenn., September, 1881.

Dr. Richard Cheatham, health officer, &c., transmits the mortality report, giving a total of 109 deaths from all causes during the month, being an increase of 24 as compared with the previous month. Of the total number 41 were referred to zymotic diseases, including 20 from diarrhœal diseases, 12 from fevers, and 1 each from septicæmia, diphtheria, erysipelas, whooping-cough, and croup. There is a decline of 4 in the number of deaths from diarrhœal diseases as compared with last month, while the deaths from fevers increased from 5 to 12, the most marked increase being in deaths from typhoid fever, which increased from 3 to 8. Phthisis pulmonalis caused 15 deaths. Of this number 7 were white and 8 colored.

Of the total number of deaths 60 were white and 49 colored, giving an annual death-rate per 1,000 of 25.80 for the white and 38.22 for the colored population. The annual death-rate per 1,000 for the entire population was 30.52, being an increase of 6.72 as compared with the previous month and of 12.06 as compared with the corresponding period of last year, and 5.20 per 1,000 in excess of the average mortality in September during the past five years.

The mean temperature during the month was 75.6 and the total rainfall was 6.49 inches, both being in excess, as shown by the record of observations taken during the past ten years.

Norfolk, Va., September, 1881.

The mortality report for September, furnished by Dr. James D. Galt, health officer, gives a total of 75 deaths from all causes. This number includes 11 from phthisis pulmonalis, 4 from pneumonia, 7 from malarial fevers, 15 from diarrhœal diseases, 4 from typhoid fever, 5 from diphtheria, 2 from measles, and 3 from whooping-cough.

Of the total number of deaths 39, or 52 per cent., were of children under 5 years of age.

Compared with September, 1880, the report shows an increase of 13 in the number of deaths and a still larger excess as compared with the number of deaths registered in the corresponding months of 1879 and 1880. The total population is estimated at 21,966—white, 11,333; colored, 10,633. Of the deaths registered during September there were whites 38, colored 37, giving an annual death-rate of 38.2 for the white and of 41.2 for the colored population. The annual death-rate per 1,000 for the entire population was 40.9.

Paterson, N. J., September, 1881.

George Boyd, registrar, transmits the mortality report for September, giving a total of 122 deaths from all causes, a decrease of 20 as compared with the report for the preceding month, and of 37 as compared with that for July of the present year. An increase of 26 is, however, shown when compared with the report for the corresponding month in 1880. Of the total number of deaths registered in September, 12 were referred to zymotic diseases, including 26 from diarrhœal diseases, 2 from croup, and 2 from scarlet fever. Under the heads of phthisis pulmonalis and consumption 17 deaths are reported, being an increase of 12 as compared with the number reported in the preceding month. The deaths reported from pneumonia and bronchitis also increased from 3 in the previous month to 5. The number of deaths of children under 5 years of age declined from 71 in August to 63, though still equal to 51.6 per cent. of the total number of deaths reported. The annual death-rate per 1,000 of the population was 28.6.

Petersburg, Va., September, 1881.

Dr. E. W. Gordon, president, transmits the report of the board of health for September, giving a total of 66 deaths from all causes, whites 23, colored 43. The population is estimated at 22,000—white 10,000, colored 12,000—thus giving an annual death-rate per 1,000 of 27.6 for the white and of 43 for the colored population. The annual death-rate for the entire population was equal to 36 per 1,000. Of the total number of deaths 21—whites 12, colored 12—were referred to zymotic diseases, as follows: Typhoid fever, white 1; malarial fevers, white 4, colored 3; diarrhœal diseases, white 3, colored 1; diphtheria, white 1, colored 1; whooping-cough, white 3, colored 2. Phthisis pulmonalis caused 5 deaths, white 1, colored 4. The total mortality of children under 5 years of age was 42, or 63.6 per cent. of the total number of deaths registered. Of this number there were white 13, colored 29.

Wilmington, Del., September, 1881.

The report of Dr. E. B. Frazer, registrar, gives a total of 122 deaths during the month. Of this number 56, or 45.9 per cent., were of children under 5 years of age. The principal causes of death were consumption, 16; cholera infantum, 10; marasmus, 12; meningitis, 3; malarial fever, 2; pneumonia, 2; small-pox, 1; typhoid fever, 7; typho-malarial fever, 2, and whooping-cough, 1. The annual death-rate per 1,000 of population during the month was 34.5. The small-pox, which had prevailed as an epidemic for several months, has almost entirely disappeared. But few cases are reported, and but 1 death from the disease occurred during the month.

Vineland, N. J., September, 1881.

Dr. Charles Brewer reports 9 deaths during the month, 2 from typhoid fever, 1 from croup, 2 from phthisis. He states that the character of the disease prevalent during the month was a mild type of bilious remittent, attributable to the frequent changes in temperature.

ABSTRACTS FROM CONSULAR REPORTS.

Acapulco, Mexico.—John T. Sutter, jr., United States consul, reports a total of 16 deaths from all causes in the three weeks ending September 24. No report is made of the causes of death, or concerning contagious or infectious diseases.

Aden, Arabia.—United States Consul G. H. Heap writes from Constantinople, under date of September 27, that an official telegram from Aden to Lord Dufferin, the English ambassador here, states that the total number of cases of cholera in Aden, from the 2d of August to 2 p. m., September 22, was 175, of which number 141 proved fatal.

Aspinwall, United States of Colombia.—James Thorington, United States consul, transmits reports for the week ending October 1. The total number of deaths from all causes during the week was 8. No deaths were caused by contagious or infectious diseases, nor are any cases of such diseases reported in the city.

Belfast, Ireland.—United States Consul A. B. Wood reports 88 deaths from all causes during the week ending October 1. Among the principal causes of death were phthisis pulmonalis, 19; diseases of the respiratory organs, 16; diarrhœa, 6. The annual death-rate per 1,000 of population was 22.0.

He also furnishes the mortality report for Dublin and fifteen urban sanitary districts, including Belfast, for the same period. Aggregate population, 843,812. Total number of deaths registered during the week, 338. Annual death-rate per 1,000, 20.8. Of the deaths reported there were from phthisis pulmonalis, 55; diseases of the respiratory organs, 59; diarrhœa, 18; typhus fever, 3; typhoid fever, 1; scarlet fever, 10. Of the deaths from typhus fever, 2 occurred in Dublin and 1 in Belfast.

Bermuda.—Charles M. Allen, United States consul, transmits reports for the two weeks ending October 11, during which period 9 deaths occurred from all causes. He states that no cases of contagious or infectious diseases have been reported, and that the place is in good sanitary condition.

Bradford, England.—C. O. Shepard, United States consul, transmits the report of mortality for the week ending September 29, giving a total of 53 deaths from all causes, being the same as in the previous week. The annual death-rate per 1,000 was 15.0 as against 19.5 and 28.5 in the corresponding week of 1879 and 1880. Of the total number of deaths, 26, or 50 per cent., were of children under 5 years of age. Scarlet fever, which was reported as epidemic last week, still shows a tendency to spread.

Breslau, Germany.—United States Consul Henry Dithmar reports a total of 142 deaths during the week ending September 27, of which number 37, or 25 per cent., were from contagious or infectious diseases. Diseases of the respiratory organs are reported as prevailing. The annual death-rate per 1,000 of population was 27.12.

Buenos Ayres, Argentine Republic.—United States Consul E. L. Baker reports that during the month ending August 31 there was a total of 513 deaths from all causes, of which there were 12 from diphtheria and 2 from scarlatina. Bronchitis and pulmonary diseases, and intermittent and typhoid fevers, as also mild cases of small-pox, are reported as prevailing. The city is in bad sanitary condition, and this, together with wet weather, which prevails, has occasioned a great deal of sickness. In the interior of the country small-pox is reported as raging in the most virulent form and causing great mortality.

Calcutta, India.—Acting United States Vice-Consul-General C. C. Bancroft reports for the week ending August 27 a total of 199 deaths, of which there were 16 from cholera and 13 from typhoid fever. Annual death-rate, 21.1 as against 21.9 in the previous week.

CAPE HAYTIEN, HAYTI.—Stanislas Gontier, United States consul, transmits reports for the two weeks ending October 1. During that period 46 deaths were reported, though the causes of death are not stated. The annual death-rate per 1,000 during the period covered by the report was 119.6. This excessive mortality is largely due to the epidemic of small-pox which is now raging. The consul states that the disease was more disastrous during the week ending October 1 than it was during the previous week. He also reports that the city is in a very bad sanitary condition.

FREETOWN, SIERRA LEONE, WEST COAST OF AFRICA.—Judson A. Lewis, United States consul, reports a total of 40 deaths during the month of August, including 1 from small-pox, 13 cases having been reported during the month. Small-pox has become epidemic, though all the cases reported thus far are of the mildest form.

GLASGOW, SCOTLAND.—W. Gibson, United States vice-consul, reports a total of 191 deaths from all causes during the week ending September 24. Of this number there were from typhoid fever 16, and from other contagious or infectious diseases 16. Pneumonia is reported as prevailing. Sanitary condition of the city is noted as good.

HAVANA, CUBA.—United States Consul-General Henry C. Hall reports a total of 125 deaths during the week ending October 8. Of this number there were 10 from yellow-fever, 1 from small-pox, and 4 from typhoid fever.

LEITH, SCOTLAND.—United States Consul J. A. Leonard transmits the report of the registrar-general for the week ending October 1, giving a total of 23 deaths from all causes. Of this number there were 3 from diphtheria, 3 from diarrhœa, and 2 from diseases of the respiratory organs. He also furnishes the mortality report for eight principal towns in Scotland for the same period. The total number of deaths registered during the week was 403; giving an annual death-rate of 17.4 per 1,000 of population, officially estimated at 1,206,057. This rate is 1.4 below that of the corresponding week of last year, and 0.8 below that of the previous week of the present year. The lowest rate of mortality was recorded at Aberdeen, viz, 10.8 per 1,000, and the highest in Perth, viz, 26.1 per 1,000. Of the total number of deaths there were from acute diseases of the respiratory organs, 83; of this number 50 occurred in Glasgow and 16 in Edinburgh. There were 39 deaths from diarrhœa, 7 from whooping-cough, 18 from diphtheria, 12 from scarlet fever, and but 1 from measles. The deaths of children under 1 year of age numbered 100, or 25 per cent. of all the deaths registered during the week.

LIVERPOOL, ENGLAND.—United States Consul S. B. Packard furnishes the mortality report for the week ending September 24. During that period there were 246 deaths reported from all causes. There were 10 cases of typhoid fever reported, 5 of which proved fatal; 32 cases of typhus fever, 7 fatal; 37 cases of scarlatina and 59 cases of measles, with a mortality of 9 and 10 respectively. The annual death-rate per 1,000 of population was 23.0.

LONDON, ENGLAND.—United States Consul J. Nunn forwards report for the week ending September 24, during which period 1,279 deaths were registered. This number included 26 from small-pox, 17 from measles, 48 from scarlet fever, 14 from diphtheria, 31 from whooping-cough, 3 from typhus fever, 40 from typhoid fever, and 36 from diarrhœal diseases; 217 deaths were referred to these diseases, which was 16 below the corrected average number in the corresponding week of the last ten years. The annual death-rate per 1,000 of population was 17.4.

The reports from twenty large English towns, including London, for the same period, with an aggregate population of 7,608,775, gives a total of 2,655 deaths, and an annual death-rate per 1,000 of 18.2. The 2,655 deaths include 28 from small-pox, 39 from measles, 110 from scarlet fever, 21 from diphtheria, 53 from whooping-cough, 73 from fever, and 103 from diarrhœa. The lowest death-rate recorded during the week was at Bradford, 15.0, and the highest at Hull, 24.5.

MANHEIM, GERMANY.—United States Consul E. M. Smith reports a total of 20 deaths during the week ending September 24. No epidemic diseases are reported, and the city is said to be notably clean.

MARACAIBO, VENEZUELA.—United States Consul E. H. Plumacher furnishes reports from August 28 to September 24, inclusive. No official report of the number of deaths is made. Yellow fever in mild form continues to prevail, and the city is in bad sanitary condition. During the week ending September 10, immense swarms of locusts again made their appearance, and this plague continued to increase until the people in the agricultural districts are in danger of starvation. Almost every growing thing has been devoured by the locusts, and Indian women are now bringing their children to the city to sell for food.

RIO JANEIRO, BRAZIL.—Thomas Adamson, United States consul-general, sends reports for the three weeks ending September 17, giving a total of 461 deaths from all causes. Of the deaths reported there were 2 from yellow fever, which occurred during the week ending September 3; 6 from small-pox, 8 from typhoid fever, 9 from pernicious fever, and 73 from consumption. Pulmonary diseases are reported as prevailing. The annual death-rate per 1,000 during the period embraced in the reports was 24.2.

ST. THOMAS, WEST INDIES.—V. V. Smith, United States consul, reports a total of 18 deaths in the week ending September 23, as against 7 in the previous week. Gastric fever, diarrhœal diseases, and intermittent and remittent fever are prevailing diseases. The mortality report for the year ending December 31, 1880, is also re-

[Continued on page 132.]

[Continued from page 129.]

ceived. The total number of deaths during the year was 145. Of this number, 117 were reported as residents and 28 as strangers—passengers on or persons connected with vessels touching at this port. The annual death-rate per 1,000 of the resident population was 29.0.

The principal causes of death are stated as follows: Consumption, 102, natives 97, strangers 5; debility, 55; dysentery, 21; dropsy, 24; fever, 53; inflammation, 22. From the above statement it will be seen that consumption caused nearly one-fourth of deaths reported among the resident population. This disease prevails chiefly among the lowest class of laborers, who are exposed to all kinds of weather during the day and crowd together in poorly-ventilated rooms at night. Leprosy is also quite prevalent, and but little effort is made to isolate the sick. It rarely proves fatal, however, as but one death from this disease occurred during the year. But three deaths occurred from yellow fever in the year 1880, and these were of strangers brought to the island sick with the disease. A considerable commerce is carried on with Aspinwall, Vera Cruz, Havana, and other ports, about thirty steamers arriving each month; and although some of the ports have been and are still infected with yellow fever, the quarantine laws of the island have been so carefully administered that not a case has occurred among the native population. In closing his report the consul writes as follows: St. Thomas has for years had the reputation of being a place where infectious and contagious diseases constantly prevail. I am glad to say that such is not the case. I am of the opinion that healthy people, of temperate and otherwise regular habits, can come and remain here with as much security from such diseases as is enjoyed in many parts of the United States.

SINGAPORE, INDIA.—A. G. Studer, United States consul, reports, under date of August 29, that a number of deaths from choleraic diarrhœa have occurred in Tulok Blangah, a Malay village about three miles west of Singapore. An inspection of the place was made by the inspector-general of police, with a medical staff, and a general cleansing of the place ordered, since which no new cases have been reported.

SYDNEY, NEW SOUTH WALES.—United States Consul J. H. Williams reports to the Department of State, under date of September 2, that small-pox has become epidemic. The disease made its appearance early in June, and for a considerable time there were but a few isolated cases. It has, however, increased to such an extent that since August 16 no clean bills of health have been issued by the consul to vessels leaving the port. It has been assumed by the authorities that the disease was introduced from China, though the consul states that so far as he can learn there is no proof that such is the case. All China ports have, however, been proclaimed as infected, and all vessels coming from any of those ports, whether they have or have had sickness on board or not, are liable to be quarantined. This applies to American as well as all other ships. A proposition is now pending in Parliament imposing heavy penalties on all vessels that bring Chinese into this colony.

VERA CRUZ, MEXICO.—Charles Trowbridge, United States vice-consul, reports a total of 43 deaths in the two weeks ending September 25. Of this number 11 were from yellow fever, and 2 from small-pox. The harbor is still reported healthy and free from sickness.

During the two weeks ending October 9 there was a total of 55 deaths. Of this number there were 10 from yellow fever and 2 from small-pox.

VIENNA, AUSTRIA.—The report for the week ending September 24 received from James Riley Weaver, United States consul, gives a total of 290 deaths, of which there were, from small-pox 6, diphtheria 3, typhoid fever 2, and consumption 76. The annual death-rate per 1,000 of population was 21.3. The sanitary condition of the city is reported to be good.

NOTICE.—All official communications to the National Board of Health should be addressed to the *Secretary* of the Board, Dr. T. J. Turner, U. S. N. Correspondents and others whose writing may be for publication are reminded that much inconvenience is caused by writing on both sides of the paper.

REPORTS OF CORRESPONDENTS OF THE NATIONAL BOARD OF HEALTH.

JACKSONVILLE, FLA.—Dr. R. B. Burroughs writes, under date of September 26, to correct an impression, said to prevail, that yellow fever or fever of a malignant type exists at Jacksonville. He states that during the months of July, August, and to September 24, there were but 7 deaths from fevers, of which 2 were from typhoid fever, 2 from congestive, and 3 from bilious remittent fever. He states further that he is familiar with the symptoms of yellow fever, having passed through the epidemic in Savannah in 1854, and he is certain that neither yellow fever nor fever of a malignant type has existed in Jacksonville during the past summer.

NEWPORT, KY.—Assistant Surgeon John Brooke, U. S. A., reports through the Surgeon-General of the Army, under date of October 10, that small-pox is prevailing in Newport and Covington, Ky., and in the neighboring city of Cincinnati, Ohio.

SYDNEY, NEW SOUTH WALES.—The mortality report for July gives a total of 290 deaths in the metropolitan division, embracing Sydney and suburbs, being 32 more than the number registered in July, 1880. Of the total number of deaths, there were from phthisis pulmonalis 37, pneumonia 13, and bronchitis 19.

NOTICE.—In filling the reports on the postal cards for cities and hospitals, the figures are frequently so placed between the lines as to leave the disease intended entirely uncertain, except in cases where the judgment of the compiler may enable him to determine which is meant. This may be avoided by a stroke of the pen after the disease to be recorded. The *total* numbers should be placed in their proper columns, and no figures placed immediately after the word *total* will be noted in the tables. Those who report *still-births* will please note them separately, as they are not included in the tables of mortality in the BULLETIN.

THE NATIONAL BOARD OF HEALTH.

OFFICERS.

JAMES L. CABELL, LL. D., &c ..... *President.*
JOHN S. BILLINGS, Surgeon United States Army ..... *Vice-President.*
THOMAS J. TURNER, Medical Director U. S. Navy ..... *Secretary.*

MEMBERS.

PRESTON H. BAILHACHE, M. D., U. S. M. H. S., 509 Maple ave., Le Droit Park, Washington, D. C.

National Board of Health

BULLETIN.

VOL. 3.] WASHINGTON, D. C., SATURDAY, OCTOBER 29, 1881. [No. 18.

PROPOSED SANITARY LEGISLATION IN OHIO.

The following form of a bill for the organization of a state board of health in the State of Ohio is proposed by the Sanitary News of Cincinnati:

[A bill to create a State board of health and regulate the practice of medicine in the State of Ohio.]

An act to create a State board of health and to regulate the practice of medicine:

SECTION 1. Be it enacted by the general assembly of the State of Ohio, That within fifteen days after the passage of this act the governor shall nominate and by and with the consent and advice of the senate appoint, from different parts of the State, nine physicians, active in practice and eminent in their profession, who, when organized, shall be known as the "Ohio State Board of Health." Three of said physicians shall be appointed for one year; three for two years; and three for three years, and annually thereafter three physicians of like reputation and in like manner shall be appointed to fill the vacancies occurring in said board, who shall hold their offices for three years and until their successors are appointed and qualified. The said nine physicians so appointed, within twenty days after their appointment, having first taken the oath of office prescribed by the constitution of the State for State officers and received certificates of their appointment from the secretary of state, shall meet and organize by electing one of their number president. They shall also as soon as a suitable person can be obtained elect a secretary who shall be the executive officer of the board. They may elect one of their number a secretary, in which event the governor shall fill the vacancy, and it is hereby made the duty of the governor to fill all vacancies in said board occurring when the legislature is not in session until the same shall meet again.

SEC. 2. The State board of health shall make, adopt, and publish such rules and order of business as may be necessary to make this act effective and facilitate the transactions of its business. It shall provide a seal, and all correspondence and papers emanating from it shall be under the seal of said board. It shall meet quarterly, and oftener if deemed necessary, at such place as it may designate, the first meeting to be held in the city of Columbus. The annual meeting after the first shall be held during the month of June in each and every year, and a majority of its members shall constitute a quorum for the transaction of business. No members of the board, except the secretary, shall receive any compensation for services rendered; but their traveling and other necessary expenses, while employed on the business of the board, shall be allowed and paid. The secretary shall receive such compensation as may be allowed by the State board of health, and approved by the governor, and to be paid him in the manner as the salaries of other State officers are paid, and such necessary expenses shall be allowed him as the secretary of state shall audit, on the presentation of an itemized account, having vouchers annexed, together with the certificate of the board.

SEC. 3. The secretary shall hold his office so long as he shall faithfully discharge the duties thereof; but may be removed for just cause, at any regular meeting of the board, by a majority of all the members voting therefor. He shall keep a record of the transactions of the board; shall have the custody of all books, papers, documents, and other property belonging to the board, which may come to him as such secretary, or be deposited in his office; shall communicate with other State boards of health, and with the local boards of health within this State; shall file and keep all reports received from such boards, and all correspondence of the office appertaining to the business of the board. He shall perform all other duties prescribed in this act for the said secretary, or directed by the State board of health.

SEC. 4. The State board of health shall supervise the health interests of the people of this State. They shall make careful inquiry in respect to the causes of disease, and especially of epidemics, and investigate the sources of mortality, and the effects of localities, employments, conditions, ingesta, habits, and surroundings on the health of the people. They shall advise officers of the government or other State boards in regard to the location, drainage, water supply, disposal of excreta, heating and ventilation of public buildings. They shall collect and preserve such information relating to health, forms of disease and deaths, as may be useful in the discharge of the duties of said board. And health officers of all local boards of health in the State shall transmit to said State board of health copies of their reports and publications, and such sanitary information as may be useful to the people of the State.

SEC. 5. The State board of health shall supervise the registration of marriages, births, and deaths, and also the registration of forms of disease prevalent in the State, and the secretary of said board shall superintend the registration of the vital statistics of the State. They shall prepare the blank forms necessary for obtaining and preserving such records, and forward such ot them to the health officers of local boards as may be required by physicians, assessors, local boards, and others whose duty it is to gather information in relation to the vital statistics of the State. The State board of health shall also prepare the forms and establish the rules by which permits for transporting the dead bodies of persons for burial beyond the county where the death occurs; and in all cases the said State board of health shall require coupons to be attached to such permits, to be detached and preserved by every common carrier or the person in charge of any vessel, railroad train, or vehicle to which dead bodies shall be delivered for transportation. Any violation of these rules shall subject the offender to a fine of ten dollars for each offense.

SEC. 6. The State board of health shall, when they may think best so to do, appoint committees or engage suitable persons to render special sanitary service, to make or supervise practical and scientific investigations and examinations, requiring expert skill, and to prepare plans, and report thereto. And it is hereby made the duty of all officers and agents having the control, charge, or custody of any public structure, work, ground, or erection, or of any plan, description, outline, drawings, charts thereof, or relating thereto, made, kept, or controlled under any public authority, to permit and facilitate the examination and inspection by said board ordered, and the members of said board, and such other officer or person as may at any time be by said board authorized, may, without fee or hinderance enter, examine, and survey all grounds, erections, vehicles, structures, apartments, buildings, and places. But the legislature shall first determine the amount which shall be expended during the year for such special sanitary work, and the expenditure shall not exceed the amount thus determined and set apart for the year.

SEC. 7. The directors of the county infirmaries of the several counties of this State shall act as local boards of health for their respective counties. Each local board thus created shall elect a physician, preference being given to adepts in sanitary science, who shall be *ex officio* a member of said local board and the health officer of the same. He shall hold his office during the pleasure of the board, but may be removed for just cause at any regular meeting of the same by a majority of the members voting therefor, on which motion he shall not vote. The local boards of health here created shall not supersede or in any way interfere with such boards established by municipal regulations in any of the counties of this State. But all local boards of health in this State, created by this act and existing by authority of municipal law, shall be governed by and perform such duties as may be required by the State board of health.

SEC. 8. The health officer of the several local boards of health throughout the State immediately after his election shall notify the State board of the fact, and state his post-office address. He shall receive and without delay distribute all forms from the State board of health to the rightful persons and all returns from physicians, assessors, and local boards to the said State board of health. And he shall perform such other duties as this act, his local board, or the State board of health may require of him. And he shall receive for his services so rendered such reasonable compensation as his board may allow and the judge of the probate court approve, to be paid out of the county treasury. And any failure of said health officer to perform the duties prescribed in this act shall subject him to a fine of ten dollars for each and every offense.

SEC. 9. Every person proposing to engage or continue in the practice of medicine in this State shall, within thirty days after the organization of the State board of health provided for in this act, present to said board for verification and record a diploma from a reputable and legally organized medical college or an affidavit or other satisfactory evidence that the applicant is a graduate in medicine or has been in the continuous practice of medicine in this State for at least ten years preceding the passage of this act, whereupon the State board of health shall give to such applicant a certificate stating the facts as to graduation or continuous practice, to which shall be added the name of the county in which the applicant proposes to locate or is located, which certificate shall be recorded by the county clerk in a book to be provided by the county commissioners and kept in the office of the county clerk, and this certificate shall be conclusive evi-

[Continued from first page.]

dence of the right of the lawful owner of the same to practice medicine in and from the place designated in said certificate, and without such certificate and record it shall not be lawful for any person to practice medicine in this State. And any one who prescribes or prescribes and furnishes medicines to the sick for a consideration shall be held in the meaning of this act as engaged in the practice of medicine.

SEC. 10. Every person applying for a certificate as provided for in this act shall pay a fee of one dollar, which shall be paid into the State treasury, and every person attempting to practice medicine in this State without such certificate, shall, upon conviction, be fined not less than five nor more than fifty dollars for each and every offense, to which may be added imprisonment not to exceed thirty days. And every physician who may be convicted of using his profession for unlawful purposes, as in the production of criminal abortion, &c., shall be held as forfeiting his certificate and all right to practice medicine in this State.

SEC. 11. It shall be the duty of every physician to keep a record of the deaths occurring in his practice or that may come to his knowledge where death occurs without medical attendance, noting the form of disease and as far as possible the cause which produced it, and report the same to the local board of health at the time and in the manner prescribed by the State board of health, and any failure to do so shall subject said physician to a fine of ten dollars for each and every offense.

SEC. 12. It shall be the duty of assessors of personal property in the several townships and wards of cities and towns throughout the State annually to collect such information as to marriages, births and deaths as may be required by the State board of health, and report the same at the time and in the manner prescribed by said board to the local board of health, and any failure to do so shall subject such assessor to a fine of ten dollars for each and every offense.

SEC. 13. It shall be the duty of said State board of health, on or before the first Monday in December in each year, to make a report in writing to the governor of the State upon the vital statistics and the sanitary condition and prospects of the State, and such report shall set forth the action of said board and of its officers and agents and the names thereof, and also the names of physicians registered for the past year, and may contain other useful information, and shall suggest any further legislative action or precautions deemed proper for the better protection of life and health; and the annual report of said board shall also contain a detailed statement of the money paid out by or on account of said board, and a detailed statement of the manner of its expenditure during the last past year, but the amounts so paid out shall not aggregate a sum exceeding twelve thousand dollars in any one year, and the sum of twelve thousand dollars is hereby appropriated for the purposes of this act. And this report shall be published in form and manner as other State reports.

SEC. 14. It shall be the duty of all officers and persons named in this act to faithfully discharge the duties assigned to them severally, and all of such officers and persons who shall neglect or fail in the discharge of said duties where fines are not specifically stated, shall be declared guilty of a misdemeanor, and upon conviction, shall be fined in such sum as the court in its judgment may deem necessary to secure the proper enforcement of this act. And all prosecutions under this act shall be in the court of common pleas, and conducted by the prosecuting attorney for the county in which the offense was committed, and all fines imposed and collected shall be paid into the county treasury.

SEC. 15. This act shall be in force and take effect immediately. And all acts and parts of acts in contravention of this act are hereby repealed.

ABSTRACTS FROM CONSULAR REPORTS.

AMOY, CHINA.—United States Consul W. Elwell Goldsborough reports, under date of September 3, that the city is free from epidemic. The population is estimated at 300,000. In the absence of official records, the number of deaths cannot be stated. The city is in bad sanitary condition in consequence of the want of proper drainage and attention to cleanliness.

AMSTERDAM, NETHERLANDS.—D. Eckstein, United States consul, reports a total of 39 deaths from all causes during the week ending October 1. The annual death-rate per 1,000 of inhabitants was 22.2.

BANGKOK, SIAM.—United States Consul-General John A. Halderman writes, under date of August 25, that Asiatic cholera as an epidemic has disappeared from that place, and that it is now only heard of in sporadic cases.

BARBADOES, WEST INDIES.—United States Consul Robert Y. Holley reports, under date of October 10, that yellow fever is gradually abating at that place, and that it is now chiefly confined to the troops stationed about five miles from the city, to which point they were removed from the garrison a few weeks since.

BOMBAY, INDIA.—B. F. Farnham, United States consul, transmits reports for the two weeks ending September 13. The total number of deaths reported from August 31 to September 13 was 875, giving an annual death-rate of 29.7 per 1,000 of the population. Of the deaths reported there were 26 from cholera, 14 during the week ending September 6, and 12 during the week ending September 13. Cholera is also prevailing in the vicinity of Bombay. During the week ending September 6, 750 cases were reported in the district of Ahmednuggur, of which number 382 proved fatal. In the Surat district there were 63 deaths; at Ahmedabad, 23; at Aukleswar, 8; in the Tanna district, 30; in the city of Poona, 4; in the Athni taluka (Belgaum), 26; in Baroda, 14; and in Nowsaree, 1. At Lahore there were 29 deaths on September 1, and 32 on the 2d. The disease was also reported as increasing in Umballa, 30 new cases having been reported on August 31. On September 10 there were 25 new cases reported and 9 deaths. It was also reported to have broken out among the European residents at Murree, among whom several deaths had occurred. At Jullunder the disease is abating, and many of the inhabitants who had left the city in the panic which followed the outbreak of the disease are now returning to their homes. Reports from Kashmir state that cholera has appeared in Jummoo and vicinity, and that several deaths are occurring daily from the disease.

BREMEN, GERMANY.—William F. Grinnell, United States consul, reports, under date of August 17, his correspondence with the sanitary commission at Bremen relative to the steps taken to prevent disease in the recently inundated portions of the city. From consular reports previously received, it appears that portions of the city have suffered from floods three times during the past year. Bremen is also one of the principal ports from which German emigrants embark for the United States. The importance, therefore, of preserving a proper sanitary condition in the city where the emigrants are compelled to remain during longer or shorter periods previous to embarking for the United States cannot be overestimated, in view of the possible transportation of disease on shipboard and its introduction into this country. The sanitary commission state that the inundated portions of the city and territory of Bremen were placed under strict observation by the sanitary police, both during the continuance of the flood and after its abatement. This supervision extended to

[Continued on page 140.]

REPORT OF MORTALITY IN CITIES OF THE UNITED STATES FOR THE WEEK ENDING OCTOBER 15, 1881.

States.	Cities.	Total population, according to the United States Census of 1880.	Total number of deaths. (Continued from page 137.

individual tenements, and all measures adopted by competent assisting physicians have been carried out. It is also stated that no epidemic has been occasioned by the inundations, and that the few cases of typhus which could be traced to them have generally terminated favorably. The boarding-houses for emigrants are nearly all situated in portions of the city which have not been subject to the floods.

CADIZ, SPAIN.—United States Consul Ernest L. Oppenheim reports 35 deaths from all causes during the week ending September 24, giving an annual death-rate of 28.3 per 1,000 of inhabitants. The city is in good sanitary condition, and free from contagious or infectious diseases.

CALCUTTA, INDIA.—C. C. Bancroft, United States consul, reports a total of 208 deaths during the week ending September 3, giving an annual death-rate of 25.2 per 1,000 as compared with 24.1 in the previous week. Of the total number of deaths reported there were 23 from cholera, 10 from typhus fever, 58 from other fevers, 17 from diarrhœal diseases, 34 from tetanus, and 4 from phthisis pulmonalis.

CAPE HAYTIEN, HAYTI.—Stanislas Goutier, United States consul, reports, under date of September 5, that small-pox has broken out at that port, and calls attention to the following-named vessels loading for ports in the United States: Brig Nellie Ware, for New York; schooner Lizzie W. Matheson, for Boston; brig Rapid Transit, for Boston; schooner Eize and Lucre, for New York.

CIENFUEGOS, WEST INDIES.—W. P. Pierce, United States consul, reports, under date of October 9, that the sanitary condition of the port is improving. The weather has become cooler and more bracing, and so far as can be ascertained all traces of yellow fever have disappeared. It is now stated that the case reported September 22 as yellow fever on board the Norwegian vessel Swift was not yellow fever. The American brig Goodwin sailed for New York September 26, having had one death from yellow fever, that of her master, A. S. Googins. Symptoms of the disease also showed themselves among the crew. The vessel, however, was thoroughly disinfected while here, and the new master reported all well at the date of sailing.

KINGSTON, JAMAICA.—George E. Hoskinson, United States consul, transmits through the Department of State the monthly reports of the registrar-general of the island during the year ending September 30 last. These reports give a total of 1,472 deaths from all causes during the year as compared with 1,371 in the previous year. The annual death-rate per 1,000 persons living in the year ending September 30, 1881, was 38.8, against 36.2 in the previous year. Of the total number of deaths registered there were from fevers, embracing remittent, intermittent, typhoid, malignant, and undistinguished, 75; equal to 5.1 per cent. of the number of deaths recorded. From diarrhœal diseases, 141, or 9.6 per cent.; from phthisis pulmonalis, 179, or 12.1 per cent., and from acute lung diseases, 27, or 1.9 per cent. of the deaths reported. Of the deaths registered, 433, or 29.3 per cent., were of children under 5 years of age. The period of greatest mortality from the diseases named above was as follows: From fevers, during the months of January, February, and July, in which months the number of deaths was 8.14 and 9 respectively. From diarrhœal diseases in February, March, and April, the deaths being 19.29 and 24 respectively. From phthisis pulmonalis the greatest mortality occurred during the months of April, May, and July; in each of the first two months the number of deaths was 18, and in July, 19. Acute lung diseases caused but a small percentage of the total mortality; the greatest number of deaths occurring from this class of diseases in any month was 4. This number was recorded in October, 1880, and again in February, 1881. During the remainder of the year, except in the months of March and September, during which months no deaths from these diseases were reported, the monthly record did not exceed 3 deaths.

KOBÉ, JAPAN.—United States Consul J. Stahel transmits reports for the two weeks ending September 17, during which period there was a total of 38 deaths from all causes. During the week ending September 17, 3 cases of cholera were reported, all of which proved fatal.

SHANGHAI, CHINA.—O. N. Denny, United States consul-general, furnishes reports for the three weeks ending September 13. No record of deaths appears to be kept by the authorities. The consul-general states, however, that during the week ending August 30 diarrhœa and dysentery were prevailing to a limited extent. During the following week he reports one case of cholera, and states that a number of deaths from cholera are reported as having occurred in the Chinese hospitals. In the report for the week ending September 13, 10 cases of cholera are reported, 6 of which terminated fatally. Nearly all of the cases reported occurred among the crew from one ship, who contracted the disease while on shore among the Chinese.

SINGAPORE, INDIA.—United States Consul A. G. Studer reports, under date of September 5, that the sanitary condition of the port and shipping is good. The choleraic diarrhœa reported last week as prevailing in the Malay village of Tulok Blanga has abated, and no new cases have been reported. Clean bills of health are issued to vessels by the health officer of this port for the port and adjacent country. Reports from Bangkok state that there are now no cases of cholera at that place, and that the epidemic is abating in the Siamese provinces.

National Board of Health

BULLETIN.

[Vol. 3.] WASHINGTON, D. C., SATURDAY, NOVEMBER 5, 1881. [No. 19.

YELLOW FEVER AT KEY WEST, FLA.

[Report of Dr. S. M. Bemiss, member of the National Board of Health.]

SHIP ISLAND, *September* 29, 1881.

SIR: I respectfully offer the following report of my visit to Key West to "investigate and report in regard to the existence of yellow fever at that place":

I arrived at Key West on Wednesday, September 21. Meeting the health officer, Dr. Lester, on board the mail-boat, I requested him to report my arrival to the president of the board of health and solicit an early interview. In accordance with this request, Dr. Plummer, the president of the local board, very promptly called, and after a conference upon the subject of yellow fever in Key West, and the objects of my visit, he told me that he would endeavor to get his board together and invite me to meet them and exchange views with them. On the following morning the invitation was received.

I now visited the leading physicians in the place, in order to learn the precise facts regarding the existence of yellow fever in the city.

I have examined the papers giving the history of the first three cases, and have to state that no person at all conversant with the symptoms and mode of spread of this disease will for a moment doubt that these cases were correctly diagnosed as yellow fever. It occurred, however, that the local board of health dissented from this opinion, in regard to the first case, if not to all of them. They passed a resolution revoking the authority vested in Dr. F. W. Lester to act as health officer. Dr. Lester had very promptly reported the case to the National Board of Health, and it cannot be doubted that his removal from office was in consequence of this fact. This action of the local board awakened so much distrust in places having commercial relations with Key West, and such severe criticisms from the press of other places, that, after a week or two, the board thought it better to restore Dr. Lester to his former position. In justice to Dr. Lester, it should be stated that the second and third cases occurred during the interim of his suspension from office, and this is why these cases were not officially reported by the health officer of Key West.

The local board also thought proper to adopt the policy of appointing a committee of experts, to be chosen by their president, who should determine whether Ambrose, the first victim to the disease in Key West this year, did really die of yellow fever or of some other disease.

I also have to report that upon the day of my arrival at Key West, Dr. Harris, one of the leading practitioners of the town, asked me to accompany him to see a patient whose case he had officially reported as one of yellow fever. The patient was almost moribund when I saw him, and, basing my action upon the judgment and experience of his medical attendant, I telegraphed the case as the fourth one which had occurred in Key West this summer, to the date of my visit. No case was known to exist upon the island at the time of my departure.

Pursuant to agreement, I met the local board and a number of the leading citizens of the place, and explained the policy and methods which I considered best calculated to secure a better sanitary condition of their population. The city has no financial resources or funds which might enable it to put into operation any efficient sewerage system. While a large portion of the island is sufficiently above tide-water to make an underground system available, the contrary is true in respect to a very considerable portion of the town. Surface drainage is the only method employed to rid the town of sewage filth. This must always be objectionable in latitudes and localities where frequent rains and torrid heat favor noxious exhalations. But even this method is very poorly executed in Key West. The streets are badly graded, and pools of water are met with in a majority of them. If there are ordinances requiring the removal of garbage and privy accumulations, they are not properly enforced. It may be further stated that the dwelling-houses in Key West are not constructed with reference to the sanitary well-being of their occupants. They are for the most part constructed of wood, without chimneys or any provision for fires. In a great many instances the weather-boarding is badly, if at all, protected by paint or white-wash, and the process of decay is astonishingly rapid in the almost perpetually alternating rains and sunshine of this locality.

But these trespasses against ordinary sanitary precepts have, in all probability, less to do with the occurrence of yellow fever at Key West than other circumstances now to be enumerated. Key West must be looked upon, in any sanitary sense, as one of the most important points within the boundaries of the Union. It is, as it were, a sanitary outpost where epidemic invasion is continually threatened. Its principal trade is with Havana, and the citizens are remarkably sensitive in regard to any interruption of this traffic. I found a great deal of misapprehension and unfounded opposition to the National Board of Health, on account of the alleged fact that an inspector sent to Key West by the National Board had stated to the citizens that the only means of keeping out yellow fever was by the abandonment of all trade with Cuba, and that the National Board favored such a course. It would, in my opinion, be extremely unwise to attempt to place inhibitory restraints upon commerce between Key West and the West India Islands. The passage is so short, and the opportunities to evade severe quarantine restrictions so facile, that too stringent rules would in all probability result in evil instead of good. In my opinion a skillful inspection of all vessels, persons, and material arriving from infected ports is more likely to prove efficacious in preventing the importation of yellow fever than quarantines of mere detention. Of course those engaged in this service should have authority to hold suspected vessels, persons, or material under observation sufficiently long to practice the most thorough cleansing and disinfection, and if unacclimated persons be found among the crew or passengers, sufficiently long to terminate the usual period of incubation of yellow fever—say five days.

But whatever methods of prevention or quarantine may be adopted, there is continual danger that yellow-fever cases will occur in Key West. Some of the citizens, and perhaps some of the physicians, believe the disease either to be indigenous or permanently domiciled there. But this theory, which has been often applied to other portions of the United States, melts away and becomes untenable wherever proper means of prevention are employed. I know of no reason in the sanitary history of Key West furnishing grounds for a belief that it is an exception to this statement.

I think I hazard nothing in saying that when a case of yellow fever occurs in Key West the greatest obstacle in the way of attempts to stamp it out is found in the difficulty of securing prompt and competent isolation. Frequent contact with yellow fever seems to render people utterly indifferent to it, in so far as it concerns themselves, and they are prone to lose sight of the worst characteristic the disease possesses—its spreading nature. No restraints were fixed against visits to Ambrose's room after his physicians had pronounced the case to be one of yellow-fever. Indeed, it was affirmed in my presence that when the president of the local board questioned the diagnosis, he invited non-professional persons to visit the case and give their opinions of its character. The same lack of proper precautions regarding the body, clothing, and surroundings of the patient was continued after his death. These circumstances are not mentioned in a censorious spirit, for the preventability of yellow fever epidemics is too recently established as a fact to justify censure against those who may never have witnessed well-directed and practical efforts to prevent the spread of the disease.

I found quarantine enforced very strictly against Key West by most of the Gulf towns. The cases were located quite a distance from the shipping. Their number and situation were not such as to justify such stringent quarantines, if all the boards of health of these various places, together with that of Key West, had been working harmoniously under the rules of the National Board of Health, or upon any uniform and well-adjusted system.

There was an apparent lack of confidence in the candor of the local board, and wherever this exists imagination and rumor are liable to picture matters ten-fold worse than the reality. If the local board, in similar emergencies in future, adopt the inspection system under the supervision of the National Board of Health, quarantine against Key West may be avoided, while the interests of public health shall suffer no detriment. One, or at most two, well-experienced and vigilant inspectors should have been able to prevent the transportation of infected persons or material from Key West to other points as effectually as it was done in Tennessee and Louisiana in 1879.

Communities which establish quarantine restrictions against other places are too often accused of hostile feelings and intentions. I found nothing of the sort in Florida, but much apprehension—proba-

[Continued from page 143.]

bly more than the facts justified; but the point of trouble at last was a doubt whether all the facts were given into their possession.

The circumstances at Key West were not such as to render it proper or necessary for the National Board to offer aid. Up to the present time the local board has not asked or in any manner invited the co-operation or aid of the National Board. I, however, gave an assurance to the local board that the National Board would cheerfully and promptly comply with the law whenever in the future its aid and co-operation should be formally solicited.

Key West has a delightful climate, and a location which, under proper sanitary measures, should give it great immunity from those diseases which do not, like yellow fever, follow the channels of commerce and human intercourse. Wisdom and care in the selection of persons to serve on her boards of health; wisdom, vigilance, and care in preventing the introduction of infectious diseases, and in arresting their spread if cases do occur, and the utmost candor towards her neighbors, must insure her prosperity in the future.

Very respectfully,

S. M. BEMISS,
Member of the National Board of Health.

Dr. T. S. TURNER, *Secretary.*

REPORTS OF CORRESPONDENTS OF THE NATIONAL BOARD OF HEALTH.

MINSTER, OHIO.—Dr. E. F. Wells writes, under date of October 15, that an absence of the ordinary agues and remittent fevers endemic in that vicinity is observable during the present autumn, and that gastro-enteritis, congestion of the liver, &c., have taken their places.

TRENTON, TENN.—Dr. J. Happel states, in forwarding his mortality report for the week ending October 22, that an epidemic of dysentery is prevailing at that place, and the disease has proved fatal in a few cases.

CHOLERA AT ADEN, ARABIA.

The report of James S. Williams, United States consul, transmitting a copy of the official returns concerning the cholera at Aden from August 2 to September 19, inclusive, has been received from the Department of State. From this report it appears that there were 78 cases and 63 deaths between August 2 and September 9, a period of thirty-eight days, and from September 9 to the close of September 19, a period of ten days, there were 82 cases and 62 deaths, giving a total of 160 cases and 125 deaths from the disease during the entire period embraced in the report. It is also stated that the epidemic has thus far been confined exclusively to the lower classes. The people among whom the epidemic has prevailed are classified as follows: Arabs, 16 cases, 10 deaths; Africans, 138 cases, 113 deaths; Indians, 6 cases, 5 deaths.

THE BRITISH BARK SIENNA.

Dr. Thomas F. Wood, secretary of the State board of health of North Carolina, writes from Wilmington, under date of the 18th instant, calling attention to the report of J. B. Terres, United States vice-consul-general at Port au Prince, published in the Bulletin of October 8, regarding the arrival of the British bark Sienna at that port from Wilmington, N. C., having lost two men on the passage from yellow fever. Dr. Wood states that there has been no yellow fever in the Cape Fear River within the past ten years, and that the sickness reported by the consular officer at Port au Prince was probably the malarial fever of the river in the vicinity of Wilmington. This fever often assumes a malignant form, and it is considered dangerous for crews of vessels to sleep on the river during the summer months, extending usually from July to October. The fever, however, is a preventable disease, and every master of a vessel that arrives is notified of the danger and of the remedy, and either willful neglect or an unwise economy brings such disasters as occurred on board the Sienna. To protect sailors from the ravages of the fever the Seamen's Friend Society, of Wilmington, has a large building

designed especially for lodging quarters for seamen, and the State legislature has enacted for this establishment the most stringent prohibitory rules. Accommodations are here furnished for seamen at moderate rates, and much sickness is thereby prevented. In cases where masters of vessels do not avail themselves of this means of prevention, but persist in remaining aboard their vessels with their crews, the fever rarely fails to be developed, either while in port or after leaving for sea.

INSPECTIONS AT RIO DE JANEIRO.

The officers implicated in the charges of Frank W. Beck, master of the American brig Anita Owen, published in the Bulletin of July 16 last, regarding the manner of issuing certificates of inspection at Rio de Janeiro, announce that those charges are absolutely false.

NOTICE.—In filling the reports on the postal cards for cities and hospitals, the figures are frequently so placed between the lines as to leave the disease intended entirely uncertain, except in cases where the judgment of the compiler may enable him to determine which is meant. This may be avoided by a stroke of the pen after the disease to be recorded. The *total* numbers should be placed in their proper columns, and no figures placed immediately after the word *total* will be noted in the tables. Those who report *still-births* will please note them separately, as they are not included in the tables of mortality in the BULLETIN.

NOTICE.—All official communications to the National Board of Health should be addressed to the *Secretary* of the Board, Dr. T. J. Turner, U. S. N. Correspondents and others whose writing may be for publication are reminded that much inconvenience is caused by writing on both sides of the paper.

NOTICE.—Extra copies of the BULLETIN will be furnished at this office at the rate of *five cents* per copy. Notice of at least one week should be given when a large number is required.

ABSTRACTS FROM CONSULAR REPORTS.

ASPINWALL.—United States Consul James Thorington reports, under date of October 15, that the city is free from contagious or infectious diseases and in good sanitary condition.

AUX CAYES, HAYTI.—Thomas Dutton, United States consul, transmits reports for the two weeks ending October 8, during which period 8 deaths from all causes were reported, giving an annual death-rate of 23.1 per 1,000 of the population. A disease known as the country fever is noted as prevailing, though the city is reported as in good sanitary condition.

BARBADOES, WEST INDIES.—Robert Holly, United States consul, reports, under date of September 26, that yellow fever is abating in the island and assuming a much milder form.

BERLIN, PRUSSIA.—United States Consul H. Zimmerman reports a total of 506 deaths from all causes during the week ending October 1, of which number 79 are referred to contagious and infectious diseases. The annual death-rate per 1,000 of the population during the period covered by the report was 23.4. Diphtheria and scarlet fever are reported as prevailing diseases.

BERMUDA.—United States Consul Charles M. Allen reports, under date of October 25, that the city is in good sanitary condition and free from contagious or infectious diseases. The annual death-rate per 1,000 of inhabitants during the week ending October 25 was 11.1.

BOMBAY, INDIA.—B. F. Farnham, United States consul, reports a total of 418 deaths from all causes during the week ending September 20, giving an annual death rate of 20.16 per 1,000 of the population. Cholera caused 16 deaths during the week, against 12 in the preceding week. In the northern and western portions of India, cholera as an epidemic is reported as having abated considerably in virulence. In Jullundu, where the mortality has been excessive, but two deaths occurred on September 7, and the inhabitants who, earlier in the progress of the disease, sought safety in flight, are now returning to their homes. The disease is reported to be still on the decline in the Mofussil, but in the Ahmednugger district the death rate from this cause continues high. Out of 586 cases to September 14, 252 resulted fatally. At Surat there has been a marked decline in the mortality from cholera, but 16 deaths having been reported during the past week. In Athni (Belgaum) there were 34 deaths; at Poona, 2; in the Launar district, 17; Ahmenabad, 12; and Kaira, 5. The reports from Berar announce that at the end of August cholera prevailed in all six districts, though it was decreasing in all except the Buldana district. The cattle disease prevailed in the Akola, Amraoto, Buldana, and Bassim districts, and cow-pox among cattle in Melghet.

BORDEAUX, FRANCE.—George W. Roosevelt, United States consul, reports a total of 191 deaths from all causes during the month of September, giving an annual death-rate of 27.5 per 1,000 of population. Of the total number of deaths, there were 62 from small-pox, 11 from typhoid fever, and 121 from lung diseases.

BREMEN, GERMANY.—United States Consul William F. Grinnell reports a total of 37 deaths for the week ending October 1. Of this number, 7, or 18.9 per cent., died of consumption, 3 from diarrhœal diseases, and 1 from typhoid fever.

CALCUTTA, INDIA.—C. C. Bancroft, United States consul, transmits reports for the two weeks ending September 17, during which period 463 deaths were reported. During the week ending September 10, there were 229 deaths from all causes, giving an annual death-rate of 27.8 per 1,000 of the population, and during the week ending September 17 the number was 234, with an annual death rate of 28.4 per 1,000. There were 43 deaths from cholera in the two weeks embraced in the report, 22 during the week ending the 10th, and 21 during the week ending the 17th.

CAPE HAYTIEN, HAYTI.—Stanislas Gontier, United States consul, reports, under date of September 17, that the number of cases of small-pox has diminished somewhat, though the disease has increased in virulence. The sanitary condition of the city is bad, but measures are now being taken to clean the streets and to secure the vaccination of the native population.

GEORGETOWN, DEMERARA, BRITISH GUIANA.—United States Consul P. Figylmesy reports, under date of October 1, the prevalence of yellow fever both in the town and among the shipping. Three cases have occurred among the crew on board the American bark Clotilde, of Boston, one of which terminated fatally on the 3d instant. The remaining cases are still under treatment.

HAVANA, CUBA.—United States Consul-General Henry C. Hall reports 10 deaths from yellow fever, 1 from small pox, and 2 from typhoid fever during the week ending October 15.

LISBON, PORTUGAL.—Henry W. Diman, United States consul, transmits reports from August 6 to 27, inclusive. During the week ending August 13 there was 1 death from cholera. The city is in good sanitary condition, and has, during the summer, been free from epidemic, the only diseases prevailing being those incident to the hot season. A strict quarantine is maintained against all vessels coming from sickly or suspected ports.

LONDON, ENGLAND.—J. Nunn, United States consul, furnishes the mortality report for the week ending October 8. During this period there were 1,362 deaths from all causes, giving an annual death-rate of 18.6 per 1,000 of population, against 17.4 and 16.6 in the two preceding weeks. Of the total number of deaths there were 13 from small-pox, 21 from measles, 55 from scarlet fever, 12 from diphtheria, 21 from whooping-cough, 46 from enteric fever, 30 from diarrhœal diseases, and 1 from simple cholera. The reports from twenty of the largest English towns show that scarlet fever is prevailing as an epidemic in many places. The largest proportional fatality occurred in Hull, Nottingham, Brighton, and Leicester. During the past fourteen weeks 253 fatal cases of this disease have been recorded in Hull alone. Of this number 28 occurred during the last week. The deaths from diseases of the respiratory organs have steadily increased during the past six weeks, ranging from 115, during the last week in August, to 227 in the week ending October 8. This number is, however, still 13 below the corrected average number; 124 were attributed to bronchitis and 70 to pneumonia.

MARTINIQUE, WEST INDIES.—John J. Cicéron, United States consul, writes, under date of October 1, that the quarantine has been raised for the island, and the board of health decided on that day that clear bills of health should be issued until further orders.

PORT-AU-PRINCE, HAYTI.—John M. Langston, United States minister resident, reports, under date of October 11, that the city and harbor are free from epidemic diseases and in fair sanitary condition.

RIO DE JANEIRO, BRAZIL.—United States Consul Thomas Adamson transmits reports for the two weeks ending October 1. During this period 332 deaths from all causes were reported. Among the causes of death reported were the following: Yellow fever, 1; small-pox, 4; typhoid fever, 2; pernicious fever, 11; and consumption 57. Pulmonary diseases are reported as prevailing. The annual death-rate per 1,000 during the period embraced in the report was 26.5.

RIGA, RUSSIA.—P. A. Bonholdt, United States consular agent, reports, under date of September 22, that the fatal cattle disease (anthrax) reported in August as prevailing in that region has now disappeared, and no cases are known to exist.

ROSARIO, ARGENTINE REPUBLIC.—M. Amelong, acting United States consul, reports a total of 62 deaths from all causes during the three weeks ending September 24. Bronchitis, pneumonia, diphtheria, and typhoid fever are reported as prevailing diseases. The city is in bad sanitary condition in consequence of defective drainage and bad water supply.

SANTIAGO DE CUBA, CUBA.—John Landreau, United States consul, reports 10 deaths from yellow fever, 2 from small-pox, and 7 from typhoid fever during the week ending September 30. The cases of yellow fever were confined to the troops, who are Spaniards. The harbor and vicinity are in bad sanitary condition, and bills of health are issued in accordance with the regulations of the National Board of Health.

SINGAPORE, INDIA.—United States Consul A. G. Studer reports, under date of September 12, that, the Mohammedan fast having terminated, the health of all classes is rapidly improving, and that so far as can be ascertained the port is free from epidemic diseases.

TRIPOLI, BARBARY.—John T. Robeson, United States consul, reports a total of 13 deaths during the week ending October 1, giving an annual death-rate of 33.9 per 1,000 of population. He states that the city is in good sanitary condition, and reports no cases of contagious or infectious disease.

VIENNA, AUSTRIA.—United States Consul-General James R. Weaver reports a total of 338 deaths during the week ending October 1, giving an annual death-rate of 21 per 1,000 of population. Of the total number of deaths registered, there were 10 from small-pox, 6 from scarlet fever, 2 from diphtheria, 1 from whooping-cough, 8 from typhoid fever, and 82 from consumption.

WARSAW, RUSSIAN POLAND.—Joseph Rawicz, United States consul, reports a total of 290 deaths from all causes during the week ending September 24, equal to an annual death-rate of 40 per 1,000 inhabitants. Of the total number of deaths reported 14 were referred to small-pox. He also reports 10 deaths from small-pox during the week ending October 1.

National Board of Health

BULLETIN.

VOL. 3.] WASHINGTON, D. C., SATURDAY, NOVEMBER 12, 1881. [No. 20.

REPORTS OF LOCAL BOARDS OF HEALTH.

NEW YORK.

Dr. John T. Nagle reports that during the three months ending September 30, 1881, 10,967 deaths occurred in the city of New York, being an increase of 1,452 as compared with the preceding three months, and 2,544 more than the number that occurred during the corresponding three months of 1880. The annual death-rate for the third quarter of the present year was 35.29 per 1,000 inhabitants, the population being estimated at 1,242,533.

The number of deaths from zymotic diseases during the quarter was more than 50 per cent. of the total mortality, and was in excess of the mortality from this class of diseases in the corresponding period of the past twelve years. The deaths from diarrhœal diseases exceeded by 838 the number registered during the corresponding quarter of 1880. Scarlatina, diphtheria, croup, typhus, typhoid, and malarial fevers and bronchitis and pneumonia were unusually prevalent during the quarter, and the number of deaths referred to these diseases was greater than in the corresponding periods since 1870, as shown in the following table.

Comparative statement of mortality for the first three quarters of the year, from 1870 to 1881, inclusive.

Cause of death.	1870. First quarter.	1870. Second quarter.	1870. Third quarter.	1871. First quarter.	1871. Second quarter.	1871. Third quarter.
Small-pox	201	74	6	208	304	164

REPORTS OF CORRESPONDENTS OF THE NATIONAL BOARD OF HEALTH.

BUFFALO, N. Y.—Dr. J. W. Keene, acting health officer, states, in submitting the mortality report for the week ending October 29, that there were 9 deaths from dysentery during the week, and that the epidemic of this disease is now subsiding.

CHICAGO, ILL.—Dr. M. K. Gleason, registrar, reports 49 deaths from small pox during the week ending October 29.

INDIANAPOLIS, IND.—Dr. W. E. Jeffries, secretary, reports 7 deaths from typhoid fever during the week ending October 29, and states that the disease is increasing.

KEY WEST, FLA.—Dr. F. W. Lester, health officer, reports one death from yellow fever at Key West on the 26th ultimo. The case was that of a native child three years of age, whose place of residence was outside the city limits, and on a line where four other cases occurred during the past summer. The child suffered from black vomit a short time previous to death.

PITTSBURGH, PA.—Dr. W. Snively, registrar, in transmitting the mortality report for the week ending October 29, states that 89 cases of small-pox and varioloid were reported during the week, 21 of which terminated fatally.

WHEELING, W. VA.—Dr. T. O. Edwards, health officer, reports under date of October 29, that diphtheria and typhoid fever are epidemic in that city.

REPORT OF MORTALITY IN CITIES OF THE UNITED STATES FOR THE WEEK ENDING OCTOBER 29, 1881.

States.	Cities.	Total population, according to the United States Census of 1880.	Total number of deaths.	Representing an annual death-rate per 1,000 of—	Population, according to United States Census of 1880.		Number of deaths.		Annual death-rate per 1,000.		Population under 5 years.		Number of deaths under 5 years.		Annual death-rate per 1,000.		Accidents.		Cerebro-spinal meningitis.		Consumption.		Croup.

ABSTRACTS FROM CONSULAR REPORTS.

ACAPULCO, MEXICO.—John A. Sutter, jr., United States consul, transmits reports for the three weeks ending October 16. Malarial fevers are reported as prevailing. During the week ending October 2, there was one death from small-pox.

ADEN, ARABIA.—James S. Williams, United States consul, transmits reports to October 3, stating that the cholera at Aden is abating, and that it is still confined chiefly to the African race, but few Arabs having suffered from the disease. From September 19 to 26 there were 22 deaths reported from cholera, and from September 26 to October 3 but 2 deaths occurred. From the date of the breaking out of the epidemic to October 3, 181 cases were reported, and 149 deaths, as follows: Arabs, 21 cases, 12 deaths; Africans, 157 cases, 132 deaths; Indians, 6 cases, 5 deaths. The total number of deaths from all causes during the week ending October 3 was 51, being a decrease of 30 as compared with the previous week.

ASPINWALL, UNITED STATES OF COLOMBIA.—James Thorington, United States consul, reports, under date of October 22, that the city is in good sanitary condition and free from epidemic diseases.

BOMBAY, INDIA.—B. F. Farnham, United States consul, reports that, during the week ending September 27, there were 465 deaths from all causes, of which there were 13 from cholera, and 217 from other contagious or infectious diseases. The total number of deaths registered was 50 more than in the preceding week, and 52 more than in the corresponding period last year. His report also states that the cholera has broken out among the pilgrims at Mecca, and that stringent precautionary measures have been adopted by the authorities of Egypt and Turkey.

BRADFORD, ENGLAND.—C. O. Shepard, United States consul, reports a total of 74 deaths during the week ending October 20, giving an annual death-rate of 21.0 against 23.6 in the previous week. Of the total number of deaths 12, or 50.7 per cent., were of children under 5 years of age. Scarlet fever continues to prevail, but there is a considerable falling off in the number of cases reported.

CAPE HAYTIEN, HAYTI.—United States Consul Stanislas Gontier reports, under date of October 12, that small-pox still prevails as an epidemic, but that the disease has assumed a milder form.

CARTHAGENA, UNITED STATES OF COLOMBIA.—Edmund V. P. Smith reports, under date of October 23, that the consular district is in good sanitary condition and free from epidemic diseases.

CONSTANTINOPLE, TURKEY.—United States Consul G. H. Heap reports to the Department of State under date of October 11, that in consequence of the appearance of cholera both at Aden and Mecca, the sanitary administration of Turkey adopted measures to prevent the introduction of the disease into that country. The plans proposed having been deemed inadequate by the Sultan, an order was issued convening the council of health at once, and directing the issue of a decree requiring that all arrivals from infected countries shall be subjected to a long quarantine at a suitable locality outside the Straits of the Mediterranean (Dardanelles); that every sanitary and prophylactic measure that may be judged necessary shall be adopted; that the decisions of the council shall be carried into execution immediately; and that reports be at the same time submitted to the Sultan. The city of Constantinople is in bad sanitary condition; vast quantities of filth, the accumulations of years, are to be found in the heart of densely inhabited quarters. The location of the city, however, is such that with its ample water-frontage and the deep and rapid current of the Bosphorus, it should be one of the best drained cities in the world. On the contrary, it is one of the worst, and it is doubtful whether the authorities will be able to place the city in such condition as will prevent an epidemic of cholera in case the disease makes its appearance. What has been said of the condition of Constantinople is true of all the cities and towns of Turkey. Many of them indeed are in even worse condition, and when the pestilence starts upon its march northward there will be no lack of food upon which it can feed and grow.

HAVANA, CUBA.—United States Consul-General Henry C. Hall reports a total of 126 deaths from all causes during the week ending October 22. Of this number there were 2 from yellow fever and 3 from typhoid fever.

KOBÉ, JAPAN.—J. Stahel, United States consul, reports 11 cases of cholera during the two weeks ending October 1, of which number 7 terminated fatally.

LONDON, ENGLAND.—United States Consul J. B. Nunn transmits reports for the week ending October 15. During this period 1,460 deaths from all causes were registered, being an excess of 11 as compared with the average numbers in corresponding weeks in the last ten years. The annual death-rate which had been 16.6 and 18.6 per 1,000 in the two preceding weeks, rose during the week embraced in the report to 19.9. The average metropolitan death-rate during the past thirteen weeks has been 20.5 per 1,000 against 20.3 in the corresponding periods of the past five years.

MALTA AND GOZO.—C. B. Eynaud, United States vice-consul, reports that during the month of September a fever resembling dengue has prevailed as an epidemic. No deaths, however, are reported as having been caused by this fever.

MATAMORAS, MEXICO.—United States Consul Warner P. Sutton reports, under date of October 30, that the city is in bad sanitary condition in consequence of being overflowed by the Rio Grande.

POINT A PITRE, GUADALOUPE, W. I.—Charles Bartlett, United States consul, reports a total of 28 deaths during the two weeks ending October 1; and states that the city is not in good sanitary condition, and that malarial fevers are prevailing. During the week ending September 24 there was one case of yellow fever.

PUERTO PLATA, SANTO DOMINGO.—United States Commercial Agent Theodore Huysman reports, under date of September 30, that small-pox has almost wholly disappeared from that port, but still prevails with great virulence in the interior towns.

ROME, ITALY.—Lewis Richmond, United States consul-general, reports a total of 101 deaths from all causes during the week ending September 10, giving an annual death-rate of 17.01 per 1,000 of inhabitants. Of the total number of deaths reported there were 4 from small-pox, 3 from typhoid fever, and 6 from diphtheria.

SEVILLE, SPAIN.—United States Consular Agent Charles H. Edes transmits reports for the two weeks ending October 9. During this period 139 deaths from all causes were registered, giving an annual death-rate of 25.26 per 1,000 of inhabitants. Among the deaths reported there were 6 from small-pox, 3 from typhoid fever, and 34 from other contagious or infectious diseases.

SHANGHAI, CHINA.—O. N. Denny, United States consul-general, reports 1 case of cholera, and 3 cases of typhoid fever during the week ending September 20. He also states that dysentery is more prevalent than it has been at this season during the past three or four years. Some of the cases are of very severe type, and a number of deaths from this cause are reported from the Chinese hospital.

SINGAPORE, INDIA.—A. G. Studer, United States consul, reports, under date of September 19, that the city and port are in good sanitary condition and free from epidemic diseases. The mortality reports for July and August give a total of 329 deaths from all causes during the former, and of 327 during the latter month, being an annual death-rate of 28.29 per 1,000 of population. The prevailing diseases during this period were fever and diarrhœal diseases.

ST. MARTIN, WEST INDIES.—D. C. Van Romondt, United States consul, reports, under date of October 17, that the island is free from all diseases of a contagious or infectious character.

VERA CRUZ, MEXICO.—Charles Trowbridge, United States vice-consul, transmits reports for the two weeks ending October 23, during which period there were 10 deaths from yellow fever.

The total number of deaths from all causes during the two weeks was 42, giving an annual death-rate of 47.1 per 1,000 of population

The consul also reports that the harbor is perfectly healthy, and that there is no sickness among the shipping.

VIENNA, AUSTRIA.—United States Consul James R. Weaver reports a total of 330 deaths from all causes during the week ending October 15, giving an annual death-rate of 23.5 per 1,000 of population. Of the total number of deaths 89 were from consumption.

Comparative statement of mortality, &c.—Continued.

[Continued from page 151.]

Cause of death.	1880. First quarter.	1880. Second quarter.	1880. Third quarter.	1881. First quarter.	1881. Second quarter.	1881. Third quarter.

Annual death-rate per 1,000 inhabitants	22.59	28.62	27.92	29.36	30.63	35.29
Population		*c* 1,206,577			*d* 1,242,533	

The increase of the mortality during the past quarter, as compared with the corresponding quarter of the year 1880, was from the following diseases: Small-pox, 69; measles, 42; scarlatina, 284; diphtheria, 232; croup, 33; whooping-cough, 24; typhus fever, 45; typhoid fever, 70; cerebro-spinal fever, 40; puerperal diseases, 15; alcoholism, 28; rheumatism and gout, 11; phthisis pulmonalis, 90; bronchitis, 33; pneumonia, 73; diseases of the heart, 73; marasmus and scrofula, 68; hydrocephalus and tubercular meningitis, 46; meningitis and encephalitis, 61; sun-stroke, 64; apoplexy, 14; Bright's disease, 60; suicide, 11; gastritis, gastro-enteritis, and peritonitis, 93; aneurism, 4; erysipelas, 12; cirrhosis and hepatitis, 5; inanition, 10; and cyanosis and atelectasis, 22.

The number of deaths of children under 1 year during the quarter was 3,926; under 2, 5,128; and under 5, 6,102, against 2,052, under 1 year, 3,833 under 2 years, and 4,401 under 5 years during the corresponding three months of 1880. The deaths of persons 70 years of age and over in 1880 were 435, and in 1881, 520. The number of deaths for the first, second, and third quarters during the past eleven years compares as follows:

Years.	First quarter.	Second quarter.	Third quarter.	Total for 9 months.
1871	6,555	6,597	7,924	21,076
1872	7,510	8,824	9,958	26,292
1873	6,967	6,605	9,018	22,590
1874	6,752	6,542	8,625	21,719
1875	7,842	7,004	9,256	24,102
1876	7,633	6,704	8,998	23,335
1877	6,002	6,047	8,165	20,214
1878	6,664	6,334	7,645	20,643
1879	7,576	6,606	7,686	21,868
1880	6,814	8,632	8,423	23,869
1881	9,120	9,515	10,967	29,602

The total number of deaths from small-pox, measles, scarlatina, diphtheria, whooping-cough, typhus and typhoid fevers during the three months was 1,337. Of this number 856 occurred in tenement houses*, 175 in institutions, and 309 in houses which contain less than four families.

Table showing the number of deaths from ten zymotic diseases in institutions, tenement houses, and other dwellings for the three months ending September 30, 1881.

Disease.	In houses containing three families and less	In houses containing more than three families.	Institution.	Average age. Years.	Months.	Days.
Small-pox	5	6	65	14	9	29
Measles	12	63	11	2	8	10
Scarlatina	88	271	6	4	7	14
Diphtheria	132	405	8	3	11	2
Membranous croup	38	135	5	2	11	26
Whooping-cough	31	63	.....	1	2	29
Typhus fever	2	3	41	36	1	14
Typhoid fever	39	45	64	27	5	28
Cerebro-spinal fever	28	46	5	7	8	2
Malarial fevers	70	93	19	25	11	12

d Estimated at annual rate of increase of 2.98 per cent., based upon total increase between New York State census of 1875 and United States Census of 1880.

c United States Census, 1880.

* Houses which contain more than three families living independently of each other.

The percentage of deaths from contagious diseases in tenement houses to the total deaths from this class of diseases was 64.02, while the percentage of deaths in tenement houses to the total mortality during the quarter was 57.89.

The number of cases of contagious diseases reported to the sanitary bureau during the quarter was more than double the number reported during the third quarter of last year, scarlatina and diphtheria being most prevalent, as follows:

Diseases.	Three months ending September 30—1881.	1880.
Small-pox	210	3
Measles	325	169
Scarlatina	1,056	379
Diphtheria	1,065	631
Typhus fever	81	.....
Typhoid fever	280	148
Cerebro-spinal fever	80	42
Total	3,097	1,372

The proportion of cases of small-pox reported to each death from this disease was 2.88; measles, 4.11; scarlatina, 2.97; diphtheria, 1.96; typhus fever, 1.80; and typhoid fever, 1.90. If the number of cases of these diseases be correctly reported, it will be seen that typhus fever was the most fatal disease in proportion to the number of cases, typhoid fever being second, and diphtheria third.

The mortality in institutions increased 352; in tenement houses, 1,413; and in private houses, 736, during the quarter, as compared with the third quarter of the preceding year. The deaths in institutions, tenement houses, and other dwellings during the third quarter of the past three years were as follows:

Year—	Institutions, actual mortality.	Tenement houses, reported mortality.	Private houses, reported mortality.
1881	1,775	6,349	2,696
1880	1,423	4,936	1,960
1879	1,180	4,246	2,081

During the third quarter of this year the mean temperature, Fahr., was greater, and the mean atmospheric pressure, humidity, velocity of wind, and rainfall were less than prevailed during the corresponding quarter of 1880, as shown in the following table:

Meteorology	Three months ending September 30—1880.	1881.
Mean temperature (Fahrenheit)	71.55	73.65
Mean pressure	29.979	29.918
Mean humidity	73	72
Total miles traveled by wind	13,373	13,136
Total rainfall (inches)	15.64	3.08

From New York Meteorological Observatory, Central Park, D. Draper, Ph. D., director.

NOTICE.—In filling the reports on the postal cards for cities and hospitals, the figures are frequently so placed between the lines as to leave the disease intended entirely uncertain, except in cases where the judgment of the compiler may enable him to determine which is meant. This may be avoided by a stroke of the pen after the disease to be recorded. The *total* numbers should be placed in their proper columns, and no figures placed immediately after the word *total* will be noted in the tables. Those who report *still-births* will please note them separately, as they are not included in the tables of mortality in the BULLETIN.

NOTICE.—Extra copies of the BULLETIN will be furnished at this office at the rate of *five cents* per copy. Notice of at least one week should be given when a large number is required.

National Board of Health

BULLETIN.

VOL. 3.] WASHINGTON, D. C., SATURDAY, NOVEMBER 19, 1881. [No. 21.

ANNUAL REPORT OF THE NATIONAL BOARD OF HEALTH, WITH STATEMENT OF EXPENDITURES, FOR THE FISCAL YEAR ENDING JUNE 30, 1881.

NATIONAL BOARD OF HEALTH,
Washington, D. C., November 14, 1881.

Hon. HENRY F. FRENCH,
Acting Secretary of the Treasury:

SIR: In compliance with the provisions of section 4 of the act approved June 2, 1879, entitled "An act to prevent the introduction of contagious and infectious diseases into the United States," the National Board of Health respectfully submits its third annual report.

Hitherto, for reasons which the Board considered to be of some importance with reference to the convenience of administrative operations during the period at which infectious fevers were likely to exist, the annual report has not been drawn up until the close of the calendar year. This having been made the subject of disapproving criticism, so far at least as refers to the transmission of the estimates for the next fiscal year, the Board, in deference to the supposed intention of Congress, proposes to conform to the common usage of the various bureaus of the government in regard to the commencement and end of the administrative year.

ANNUAL REPORT, 1881.

SPECIAL SCIENTIFIC INVESTIGATIONS.

In the last annual report, dated January 1, 1881, it was considered proper to refer in a general way to all the scientific investigations which had been set on foot by this Board since its organization, and they were accordingly enumerated *seriatim*.

Of the entire number then stated to be in progress, some have been since completed and others so far advanced as either to have admitted of being partially reported in preliminary papers, or only to require a brief delay for completing the record of the experiments and observations. The following (I to IV inclusive) are in the former class:

INVESTIGATIONS COMPLETED.

I. An investigation, by Drs. H. C. Wood and H. F. Formad, of Philadelphia, on the Etiology and Nature of Diphtheria, on which subject these gentlemen had previously submitted a preliminary paper which has been published in connection with the last annual report of the Board. Their final and consolidated report is now submitted. (See Appendix 1.)

This paper recites facts and experiments of great interest in their scientific relations and in their probable bearings upon sanitary questions of vital importance to the public health. The apparently positive demonstration of the fact that a fungoid organism found in healthy and in inflamed, but non-diphtheritic throats, may yet, under certain unknown conditions, assume an active state, as shown by an unlimited power of generation in culture experiments, which is not exhibited to anything like the same extent by the innocuous form of this organism, and in this active state will give rise by inoculation to all the phenomena of malignant diphtheria, is in complete accord with parallel phenomena ascertained by the independent observations of by Pasteur, Sternberg, and others, as to the identical morphological characters of harmless micrococci and of those which produce fatal septicæmia. It suggests, moreover, an analogy with the striking phenomena so recently narrated by Pasteur in his remarkable address before the International Congress in London, which phenomena he has turned to so useful an account in the protection of animals against certain malignant diseases. By inoculating sheep and cattle with the poison of charbon, attenuated by means of certain specified processes of artificial culture, he has demonstrated that this modified virus is shorn of its malignancy while it yet secures the inoculated animal from any further attack, thus greatly extending the sphere of operation of the principle involved in the immortal discovery of Jenner, and furnishing a new proof of the germ theory of disease in some of its most striking applications.

II. Experimental Investigations, by George M. Sternberg, Surgeon U. S. A., relating to the Etiology of the Malarial Fevers. (See Appendix 2.)

The experiments of Dr. Sternberg, repeating those of Klebs and Tommasi-Crudeli made in the vicinity of Rome, as a result of which they announced the discovery of a special organism which they consider to be the specific cause of the malarial fevers, seem to indicate a source of fallacy in their conclusions. Those observers seem not to have been cognizant of the fact that healthy rabbits not exposed to malarial influences, either naturally or by inoculation, do often exhibit diurnal variations of temperature (dependent apparently upon changes of external temperature or other non-malarial influence), as pronounced as those held by them to be indicative of malarial paroxysms. He further shows that the *post-mortem* appearances in the spleen, regarded by those observers to be the effect of malaria, are not in fact evidence of death from that cause, inasmuch as similar changes are found in the spleens of rabbits dead from septicæmia produced by the sub-cutaneous injection of human saliva. But while thus indicating the insufficiency of the evidence on which Klebs and Tommasi-Crudeli have based their conclusions, Dr. Sternberg does not feel warranted in denying the alleged relation of the fungoid organism to malarial fevers, a question which it is probable can only be fully settled by experiments on man himself.

In connection with these experiments of Dr. Sternberg, attention is invited to a special report by the same gentleman on "A fatal form of septicæmia in the rabbit, produced by the subcutaneous injection of human saliva." In this paper Dr. Sternberg incidentally narrates several facts going to show the occasional acquisition of virulent qualities by micro-organisms, which, under other circumstances, are quite harmless, and makes this important deduction: "The fact observed by myself, that during the summer months the mud in the gutters of New Orleans possesses an extraordinary degree of virulence, shows that pathogenic varieties of bacteria are not alone bred in the bodies of living animals. The more I study this subject, the more probable it seems to me that in this direction lies the explanation of many problems which have puzzled epidemiologists, and that the sanitarians are right in fighting against filth as a prime factor in the production of epidemics—a factor of which the *role* is easily understood if this view is correct."

III. An investigation, by Prof. Ira Remsen, of the Johns Hopkins University, Baltimore, in relation to carbonic oxide as a source of danger to health in apartments heated by cast-iron stoves or furnaces. (See Appendix 3.)

The results of Professor Remsen's inquiries indicate possible sources of error in the well-known experiments reported by a committee of the French Academy in 1868–'69, from which the conclusion was reached that cast-iron stoves, as soon as their temperature reaches dark-red heat, allow the escape of considerable quantities of the poisonous gas in question. Professor Remsen's observations go to show that in rooms heated by cast-iron stoves and furnaces there is not present in the immediate vicinity of the hot-air flues as much as 0.04 per cent. of carbonic oxide, and it remains to be shown whether such minute quantities of the gas, if present, can act injuriously on the health of those who breathe it.

IV. A Report on the Sewerage of Europe, by Rudolph Hering, sanitary engineer. (Appendix 4.)

INVESTIGATIONS PARTIALLY REPORTED.

V. The series of investigations into the relations of different soils to the air and water currents passing through them, commenced by Prof. Raphael Pumpelly, of the U. S. Geological Survey, a year ago, have been steadily prosecuted in accordance with his plans by his able associate, Prof. George A. Smyth.

A preliminary report, dated March 28 (see Appendix 5), gives the record of the details of about four hundred experiments involving very skillful and delicate manipulations. Numerous as the experiments have been, they form but the beginning of a series which opens up a new field of research of great practical importance.

The opinion widely entertained, that there is little or no danger of the pollution of wells by sewage leaching from cesspools in a sandy soil, provided a moderate distance intervenes, is completely refuted by these experiments, which prove that "sand interposes absolutely no barrier between wells and the bacterial infection from cesspools, cemeteries, &c., lying, even at great distances, in the lower wet stratum of sand." Moreover, "it appears probable that a dry gravel, or possibly a dry, very coarse sand, interposes no barrier to the free entrance into houses built upon them of those organisms which swarm in the ground-air around leaching cesspools, leaky drains, &c., or in the filthy made-ground of cities." They also show "that a house may be built on a thoroughly dry body of sand or gravel, and its cellar may be far above the level of the ground water at all times, and it may yet be in danger of having the air of its rooms contaminated by the germs from leaching cesspools and vaults; for, if the drift of the leaching be toward the cellar, very wet seasons may extend the polluted moistnre to the cellar walls, whence, after

evaporation, the germs will pass into the atmospheric circulation of the house."

VI. The investigation under the direction and supervision of Prof. J. W. Mallet, of the University of Virginia, with the co-operation of Prof. H. Newell Martin, of the Johns Hopkins University, on the best method of determining the amount of organic matter in potable water, and the specific effects of variously contaminated water on the health of persons who have used it, has now been completed so far as concerns the practical work of the laboratory. The preparation of the report will involve considerable labor and expenditure of time, and will be transmitted in connection with the next annual report.

VII. An investigation, by Mr. Ernest W. Bowditch, sanitary engineer of Boston, on the sanitary condition of summer resorts.

Mr. Bowditch had previously made for the State Board of Health, Lunacy, and Charity of Massachusetts an excellent report on the drainage of summer hotels and boarding-houses. Nearly all of those which he examined, about one hundred and fifty in number, were found to be very unsatisfactory, and threatened to become at any time foci of typhoid fever and other infectious diseases. The Board was induced to invite Mr. Bowditch to extend this inquiry to Newport, Long Branch, and other places which, from the wide extent of country from which they derive their patronage, assume a national character and importance. It is a gratifying fact that for the most part the several proprietors whose premises were inspected exhibited every disposition to correct the sanitary evils discovered by the inspection.

At Newport several of the citizens, associated as a society for mutual sanitary protection, desired a more thorough survey of the city than was consistent with the general plan of the Board, and agreed to pay the cost of the additional work. In this connection, attention is invited to a communication addressed to the president of the Board September 8, 1881, by Samuel Powel, esq., president of the Sanitary Protection Association, in regard to a grossly defective location of the quarantine of that city. That communication and the consequent correspondence with the mayor of the city and His Excellency Governor Littlefield will be found in Appendix 6.

VIII. Professor Wood, of Harvard University, Cambridge, is engaged in making a special investigation into the conditions of arsenical poisoning by means of emanations from wall papers, carpets, and other furniture containing arsenical coloring matter, which will probably be completed before the close of the year.

IX. Dr. Stephen Smith, a member of this Board and chairman of the Committee on Quarantine Legislation, will, as early as practicable, make a report on the history of quarantine in the United States, intended to exhibit, as far as extant records or reliable tradition will enable him to do it, the current events which led to quarantine legislation, or attempts at such legislation, by any of the States or by the General Government. In preparation for the execution of this task, Dr. Smith and the president of the Board, one or both, have visited the principal ports of New England, from Newport, R. I., to Portland, Me., as also the ports of New York, Philadelphia, Baltimore, Norfolk, and New Orleans, and those on the coast of Mississippi. It is proposed to complete the tour of inspection at an early day. Additional subjects for investigation will be assigned to competent hands after the next annual meeting of the Board, and will be indicated in a supplementary report.

MARITIME QUARANTINE.

With definite and, it is believed, well matured views as to the practicability of efficiently protecting the exposed ports on the South Atlantic and Gulf coasts against the introduction of contagious and infectious diseases from foreign countries, in accordance with the requirements of the act of June 2, 1879, the Board, adopting a plan proposed, and to some extent carried into execution, by the Government of France in relation to her Mediterranean ports, had at an early period of the year arranged a plan of prospective operations, involving the necessity of establishing refuge stations for infected and suspected vessels at Hampton Roads, in Virginia, at Sapelo Sound, on the Georgia coast, and in Galveston Bay, Texas, such a station having been previously established and equipped at Ship Island, in the Mississippi Sound. Estimates of the cost of construction and of maintenance for a year were submitted to Congress at the last session, but did not receive the sanction of that body, the appropriation voted for the next (the present) fiscal year being about one-third of the amount estimated by the Board to be necessary if the stations in question should be established and adequately equipped.

This unexpected curtailment of the means deemed necessary for the efficient execution of the act which prescribes the duties of the Board compelled the Executive Committee to convene a special meeting of the full Board on the 2d March, to consider and prescribe for the guidance of the committee a new plan of operations in consistency with the reduction of its funds. It was then decided to abandon all the projected schemes of construction at Hampton Roads, at Sapelo Sound, and at Galveston Harbor; to operate the Sapelo Sound station with the extremely imperfect machinery in use during the last season, consisting of a boarding-tug and a few hospital tents, and to hold the hospital barge at Norfolk with a moderate equipment in reserve for the exigencies of an outbreak of infectious disease, when a contingent appropriation voted by Congress would become available.

Prior to the action of Congress the Board had contracted for the repair of an old quarantine wharf and warehouse on James Island, in Charleston Harbor, S. C., belonging to the United States, but used by the quarantine authorities of the State.

The various structures previously erected at Ship Island, namely, a wharf, a capacious warehouse, a hospital for the sick, a suitable building, remote from the hospital, for the accommodation of persons not sick with any infectious disease but kept for a time under observation as having been on infected vessels, and finally very modest quarters for the medical officers, have all been completed. These buildings, together with the vessels necessary for the service in connection with the station have been, provided at the small aggregate cost of $30,000.

These several structures, in strict conformity to the letter of the law, are "temporary," in the sense of being built of wood and other inexpensive materials, but the hospitals and other houses are commodious and admirably adapted in a mild and semi-tropical climate to the uses for which they were designed, and, although intrinsically perishable, may be kept in a condition of usefulness at a small annual cost of repair.

It is a source of deep regret to the Board that the limitation of its resources imposed by the recent action of Congress precludes the possibility of making an equally efficient arrangement at the other named localities on the South Atlantic and Gulf coasts, and thus of preparing adequate safeguards against the introduction of infectious fevers from foreign countries through any of the ports of the United States, from Baltimore to the southern limit of the coast of Texas. Baltimore is named in this connection because although possessing a full equipment of quarantine machinery, which will always be needed for the purpose of quarantine inspection, it is to be presumed that the authorities of that port will be glad to avail themselves of a refuge station in Hampton Roads, to which they may send infected vessels, and thus avoid the danger of communicating infection to other shipping, whether vessels *in transitu* to the wharves of the city or such as are under observation at the quarantine anchorage in dangerously close proximity to the city.

It would be desirable to establish a similar station of refuge at or near the Delaware Breakwater, for the protection of Wilmington and Philadelphia. Further north the elaborately equipped quarantine stations of New York and Boston are so situated as to enable them already to fulfill this office, both for their own ports and those of neighboring States. That the station at Ship Island and other similar stations which the Board intended to establish may justly be characterized as "adequate safeguards" against the introduction of infectious diseases into any of the ports of entry which will cooperate with the National Board of Health in its efforts to secure such a result, seems to be sufficiently attested by the experience of this summer. Four yellow-fever ships have been received and treated at Ship Island during the summer, the same having been sent thither by the quarantine authorities of Pensacola, Mobile, and Pascagoula. No death has occurred among the cases received into hospital, and no case of fever has occurred upon either of the vessels after they were released, or in any port where they have subsequently touched. It may be remarked in this connection that, owing to the extent of anchorage ground off Ship Island it has been found practicable to aid the health authorities of the several ports of Hancock and Harrison Counties, Mississippi, namely, Mississipi City, Pass Christian, Bay Saint Louis, and Shieldsboro,' by assigning a part of said anchorage, distant over two miles from the anchorage for infected vessels, as an inspecting station for said ports. Their trade is not of sufficient extent to enable them to bear the expense of establishing and maintaining such a station, which is indispensable to the safety of the whole country, inasmuch as a single infected vessel coming into one of these ports might as readily originate a focus of infection, whence the disease might spread over the entire region, as in the case of ports of larger trade. This aid is rendered through the instrumentality of the medical officer at Ship Island, with little or no additional cost to the government.

The report of Dr. T. S. Scales, superintendent of the station, hereto appended (Appendix 7), gives further interesting details.

The Sapelo Sound station, located on Blackbeard Island, with its very scant and imperfect machinery, has yet proved to be a very important means of defense to the South Atlantic ports. The authorities of Fernandina, Brunswick, Darien, Savannah, and Charleston have all issued orders to pilots prohibiting the admission into their respective ports of infected vessels, namely, such vessels as have suspicious cases of disease on board, or on which such diseases have existed during the voyage, until the masters of such vessels shall produce a certificate from the superintendent at the Sapelo refuge station that they have been properly and effectively cleansed and disinfected and are now probably free from infection. Four such vessels were received and treated by Dr. W. H. Elliott, medical superintendent of the station, who has accomplished, under circumstances of great difficulty and personal discomfort, all that was practicable with the means furnished him. Details will be found in his report (Appendix 8).

The only locality in the United States in which a case of yellow fever has occurred *on shore* during the summer just ended was at Key West. For a notice of the peculiar and exceptional position of that place, reference is invited to the statements made in the second an-

nual report of this Board, and to a report by Dr. S. M. Bemiss, a member of the Board, of a recent sanitary inspection made by him under the orders of the executive committee. (See Appendix 9.)

As a part of the machinery by which the Board has attempted to facilitate the work imposed by the law of June 2, 1879, on the consular officers of the United States at foreign ports where infectious diseases habitually prevail, it has kept a competent medical officer, Dr. D. M. Burgess, on constant duty in the office of the consul-general at Havana. The services rendered by this gentleman and by Consul-General Hall have been such as to merit the highest commendation, and the practical results have been highly beneficent.

INTER-STATE QUARANTINE.

For reasons which have been heretofore stated at length, the Board had maintained during the summers of 1879 and 1880 a very efficient system of river sanitary police on the Mississippi River, by means of fixed stations for quarantine inspection, at several points between New Orleans and Cairo, as specified in former annual reports; and also of a fast sanitary patrol boat for rapid communication with localities recently infected, or supposed to be infected, for carrying medicines and other supplies, and for transporting the sick to the hospital flats moored at the fixed stations, whenever it should become necessary to depopulate a village in which infectious disease had broken out. The attention of Congress was invited in the last annual report to convincing proofs of the great value of this system, furnished by the testimonials incorporated in the report of Dr. R. W. Mitchell, a member of this Board, and at that time the director of the service in question.

With such evidences of its utility, the Board was desirous of extending and perfecting this service for the present year, and made estimates accordingly, but the smallness of the appropriation caused the Board no little anxiety as to its ability to do anything more than to put the several stations in a state of readiness for commencing operations in the event of the appearance of yellow fever at or below New Orleans. At first it was decided to act on such a basis, but it was soon found that the apprehensions entertained all along the Mississippi Valley as to the probability of an invasion of yellow fever were such as to make it absolutely certain that a rigorous quarantine would be established against New Orleans, producing vexatious and costly interruptions to trade and travel. The authorities of Vicksburg and those of Memphis had, indeed, published ordinances prohibiting the landing of either persons or merchandise from New Orleans without a certificate from the inspecting agents of the National Board of Health at these river stations. The Board accordingly, at its semi-annual meeting in June, decided to renew the service on as moderate a scale of expenditures as was consistent with the attainment of the objects in view.

The report of Dr. F. W. Reilly, superintendent of this service, furnishes the details of the work of the season. (See Appendix 10.)

SANITARY INSPECTIONS AT NEW ORLEANS.

The service of sanitary inspections of river craft and railroad running stock and freight at New Orleans during the summer months is closely connected with the operations of the Mississippi River inspection service, and is still more important, inasmuch as absolute perfection of the former, were this attainable, would supersede the necessity of further inspections above. Unfortunately such perfection is not attainable, but there may be an approximation to it, and the agency which secures this has a value which cannot be overestimated. This branch of the preventive service, during the summer of 1881, has been under the direction of Dr. S. E. Chaillé, whose vigilance and energy have been unremitting, and have been productive of beneficent results, as will appear by the facts cited in his report. (Appendix 11.)

The consideration of the several recommendations contained in his report, and the appendices thereto, will engage the attention of this Board at the approaching annual meeting in December.

INTRODUCTION OF SMALL-POX INTO THE UNITED STATES.

At an early period of the summer, the health authorities of New York, Michigan, Indiana, Illinois, Iowa, Minnesota, and Wisconsin, being impressed with the evidences of the alarming prevalence of small-pox in the Western and Northwestern States, met in conference at Chicago, on the 29th and 30th June, to consider what measures should be taken to prevent further importations of the disease and to stamp out the existing local epidemics. It was conclusively shown that the disease was for the most part introduced by emigrants from Europe taking passage at ports where it was known to exist, and where, consequently, persons coming from the interior were exposed to the contagion in cheap lodging-houses immediately before sailing. Owing to the length of the period of incubation the disease is seldom manifested until after the emigrants have passed quarantine inspection at the ports of arrival and have proceeded thence to their several destinations in the Western States, where they initiate local epidemics in numerous localities.

The conference passed resolutions calling upon the National Board o Health to aid the State health authorities, in conformity with the provisions of the act of June 2, 1879, to prevent the introduction of contagious and infectious diseases into the United States from foreign countries, and from one State to another. The executive committee accordingly felt constrained to call a special meeting of the full Board, in order to revise the rules and regulations heretofore approved by the President of the United States, for securing the best sanitary condition of vessels, including their cargoes, passengers, and crews, coming to the United States from any foreign port where any contagious or infectious disease exists, and to make such modifications as would serve to render these regulations available for the prevention of the introduction of small-pox into the country. They had been originally prepared with reference to other infectious diseases. It was also desired to consider the propriety of reporting to the President the fact that there is no adequate provision by State or municipal legislation, in any of the ports of the United States, for the effective application of preventive measures against the introduction of small-pox, and of soliciting his intervention in the manner prescribed in section 3 of the same act.

At this special meeting, held July 28, the Board found the evidence of the frequent importation of the contagion by emigrants from Europe to be fully conclusive, and that the consequences were such as to justify the demand made by the health authorities of the States referred to and to call for prompt and energetic action. Accordingly the Board adopted a revised system of rules and regulations to be observed at foreign ports for securing the best sanitary condition of vessels, including their cargoes, passengers, and crews, coming to the United States from such ports, the principal feature of which was the incorporation of a new rule requiring the vaccination of all unvaccinated emigrants about to embark for the United States from any foreign port or place in which small-pox exists.

At the same time in a separate communication the President was respectfully requested to approve a draft of "Additional rules and regulations to supplement the defective rules of local boards of health, in respect to the measures to be adopted at the home ports for preventing the introduction of small-pox into the United States."

These additional rules and regulations require the vaccination of unprotected emigrants arriving at any of the ports of the United States from places where small-pox exists, or in the contingency of their refusal to be vaccinated, then their detention in quarantine until sufficient lapse of time after their last exposure to insure their freedom from contagion. These papers were submitted to His Excellency September 29. His decision has not yet been announced to the Board.

The several papers alluded to in this statement will be found in Appendix 12.

INTERNATIONAL SANITARY CONFERENCE AT WASHINGTON.

A joint resolution of the Senate and House of Representatives, approved May 14, 1880, authorized the President "to call an international sanitary conference to meet at Washington, District of Columbia, to which the several powers having jurisdiction of ports likely to be infected with yellow fever or cholera shall be invited to send delegates, properly authorized, for the purpose of securing an international system of notification as to the actual sanitary condition of ports and places under the jurisdiction of such powers, and of vessels sailing therefrom."

As this joint resolution had its origin in a recommendation of this Board contained in its first annual report, it is considered admissible to refer very briefly to the conclusions of the conference which, with the several protocols, have been submitted to the Senate. When these shall have been published it will be seen that the scheme adopted by a majority of the conference is somewhat more elaborate and cumbrous than the plan recommended by the American delegates, who represented the views of this Board. It is also believed to be less likely to be practically efficient than the simple measures advocated by these delegates. Nevertheless, if adopted and faithfully executed by the governments interested, incalculable good will have been achieved. If objected to on the grounds of probable inefficiency or for any other cause, the governments will have an opportunity of considering an alternative proposition, which, presented by the French minister in a spirit of compromise, approximates in simplicity and capability of easy execution to that suggested by the American delegates.

By one of the provisions of section 4 of the act approved June 2, 1879, the Board of Health is required not only to make an annual report of its operations, but also such recommendations as it may deem important to the public interests. For the discharge of this part of its duty it is respectfully requested that permission be granted to make these recommendations in a supplemental report, to be sent in for transmission to Congress at an early period of the session. At the last general meeting of the Board the fiscal year for which the Congressional appropriation had so recently been made had not yet commenced, and it was not possible to foresee wants which would largely depend upon the incidents of the summer just then beginning. Accordingly no action in this direction was taken at that time. The next general meeting of the Board will be held early in December, and its recommendations may then be incorporated in a supplemental report, which will be ready for transmission in time to be delivered to the Public Printer as a part of the general report.

ESTIMATES AND EXPENDITURES.

The following statement of expenditures for the year ending June 30, 1881, is respectfully submitted.

Statement of the expenditures of the National Board of Health for the year ending June 30, 1881, by quarters and in detail, together with the expenditures from organization of the Board to June 30, 1881.

On what account.	Total for quarter ending September 30, 1880.	Total for quarter ending December 31, 1880.	Total for quarter ending March 31, 1881.	Total for quarter ending June 30, 1881.	Total expenditures for the year ending June 30, 1881.
Floating quarantine on Mississippi River	$9,988 39	$8,339 21	$3,210 09	$16,189 79	$38,027 48
Ship Island quarantine	11,737 28	10,777 10	2,016 39	8,768 54	33,299 31
Blackbeard Island quarantine	2,767 42	1,782 11	107 00	5,822 78	10,479 31
Elizabeth River quarantine	2,317 75	240 00	434 65	254 14	3,246 54
Aid to Pensacola, Fla	3,195 63	1,066 59	120 00	62 66	4,444 88
Aid to Pascagoula, Miss	97 58	71 70	.....	.....	169 28
Aid to Hancock County, Mississippi	319 35	300 00	.....	.....	619 35
Aid to Harrison County, Mississippi	353 70	413 20	.....	.....	766 90

Miscellaneous expenses National Board of Health	242 86	270 03	236 12	408 47	1,157 48
Postage	.....	.....	36 50	213 59	250 09
Total	*49,921 53	*38,204 91	21,831 26	55,031 76	164,989 46

*From the date of organization of the Board (April 1, 1879) to June 30, 1879, there was expended $9,146 41
*From June 30, 1879, to June 30, 1880, there was expended 266,762 16
From June 30, 1880, to June 30, 1881, there was expended 164,989 46

Total amount expended by the Board from date of organization to June 30, 1881, inclusive 440,898 03

It should be observed that no part of the contingent appropriation of $100,000 which was to be available in the event of an outbreak of epidemic disease has been touched.

It is requested that this amount be reappropriated under the same conditions for the next fiscal year.

The estimates of appropriations required for the prosecution of the work of the Board during the next fiscal year have heretofore been transmitted to you, and are embraced in the book of estimates of appropriations for the fiscal year ending June 30, 1883.

The attention of Congress is respectfully called to these estimates, and it is hoped they will receive favorable consideration.

Very respectfully,

J. L. CABELL,
President National Board of Health.

T. J. TURNER,
Secretary National Board of Health.

Detail statement of these expenditures heretofore reported to Congress.

RULES AND REGULATIONS FOR SECURING THE BEST SANITARY CONDITION OF VESSELS, INCLUDING THEIR CARGOES, PASSENGERS, AND CREWS, COMING TO THE UNITED STATES FROM ANY FOREIGN PORT WHERE ANY CONTAGIOUS OR INFECTIOUS DISEASE EXISTS.

[Prepared by the NATIONAL BOARD OF HEALTH, in accordance with the provisions of an act approved June 2, 1879, entitled "An act to prevent the introduction of infectious or contagious diseases into the United States."]

EXPLANATIONS.

1. The object of the following rules and regulations is to prevent the introduction into the United States of "contagious or infectious diseases."

2. The following diseases are recognized as "contagious or infectious diseases," for the purposes of these rules and regulations, viz: Asiatic cholera, yellow fever, plague, small-pox, typhus fever, and relapsing fever.

3. An "infected" port or place, in the sense of these rules, is a port or place at which either Asiatic cholera, yellow fever, plague, small-pox, relapsing fever, or typhus fever exists.

4. To secure the "best sanitary condition" of a vessel, the following points shall be observed by the owners, agents, or master of such vessel:

A. Exclusion from the vessel, as far as possible, of persons or things known or suspected to be infected.

B. Cleanliness, dryness, and ventilation of the vessel, both preliminary to loading and during the voyage.

C. Disinfection—that is, the destruction or removal of the causes of disease—which includes measures of cleanliness, ventilation, fumigation, &c.

D. The crew shall not be allowed liberty on shore after nightfall in suspected localities. They shall not be allowed to sleep on deck except under awnings. The forecastle shall be well ventilated and kept dry. Both in port and at sea the bilge shall be pumped ont each morning and evening, or more frequently, if necessary. The utmost cleanliness shall be observed at sea as well as in port. Each seaman shall have two suits of underclothing. The clothing and bedding shall be aired every clear day. In tropical climates the men shall be reqnired to wash their persons and change their underclothing every evening after work while in port, and each working suit shall be washed, dried, and aired after a day's use. These regulations as to clothing, airing of bedding, and ventilation, shall, as far as possible, be observed at sea as well as in port.

RULES AND REGULATIONS.

1. All merchant ships and vessels sailing from a foreign port where contagious or infections disease exists, for any port of the United States, must obtain from the consnl, vice-consnl, or other consnlar officer of the United States, at the port of departure, or from the medical officer—where such officer has been detailed by the President for that purpose—a bill of health in dnplicate, which shall set forth the sanitary history of said vessel, and that it has in all respects complied with these rules and regulations.

2. No vessel shall have more than one bill of health: but if she touches at other ports on the passage, that fact and the condition of those ports as to the existence of contagious or infectious disease shall be indorsed upon the original bill of health by the consnl, vice-consnl, consular officer, or medical officer of the United States.

3. The bill of health shall be in the form appended:

FORM A.

No. —. *Port of* ——.

THE UNITED STATES OF AMERICA—NATIONAL BOARD OF HEALTH.

Bill of health.

I, —— —— (the person charged to deliver the bill), at the port of ——, do hereby state that the vessel hereinafter named clears from this port under the following circumstances:

Name of vessel: ——.
Tonnage: ——.
Apartments for passengers, No. —.
Destination: ——
Name of medical officer (if any): ——.
Total number of passengers: 1st cabin, ——; 2d cabin, ——; steerage, ——.
Nature (vessel of war, ship, schooner, &c.): ——.
Gnns: ——.
Where last from: ——.
Name of captain: ——.
Total number of crew: ——.
Cargo: ——.

Vessel.

1. Sanitary history of the vessel: ——.
2. Sanitary condition of vessel (before and after reception of cargo, with note of any decayed wood). Note disinfection of vessel: ——.
3. Sanitary condition of cargo: ——.
4. Sanitary condition of crew: ——.
5. Sanitary condition of passengers: ——.
6. Sanitary condition of clothing, food, water, air-space, and ventilation: ——.

Port.

1. Sanitary condition of port and adjacent country—
   a. Prevailing disease (if any):
   b. Number of cases of and deaths from yellow fever, Asiatic cholera, plague, small-pox, or typhus fever during the week preceding—

Number of cases of—
Yellow fever: ——.
Asiatic cholera: ——.
Plague: ——.
Small-pox: ——.
Typhus fever: ——

Number of deaths from—
Yellow fever: ——.
Asiatic cholera: ——.
Plague: ——.
Small-pox: ——.
Typhus fever: ——.

   c. Population according to the last census: ——.
   d. Total deaths from all causes during the preceding month: ——.
2. Any circumstances affecting the public health existing in the port of departure to be here stated: ——,

I certify that I have personally inspected the said vessel, and that the above statements are correct.

——— ———.

[Signature of medical officer.]

I certify that the foregoing statements are made by ——— ———, who has personally inspected said vessel; that I am satisfied that the said statements are correct; and I do further certify that the said vessel leaves this port, bound for ———, in ———.

In witness whereof I have hereunto set my hand and the seal of office, at the port of ———, this — day of ———, 188–, — o'clock.

[SEAL.] ——— ———.

[Signature.]

4. Each consul, vice-consul, consular officer, or medical officer of the United States in a foreign port shall keep himself thoroughly acquainted with the sanitary condition of the port and its vicinity, especially with regard to the existence of contagious or infectious diseases, or epidemics, and shall, upon the request of the owner, agent, or master, make, or cause to be made, an inspection of every ship or vessel bound for any port in the United States, and give the bill of health required by these regulations. Vessels carrying a foreign flag shall be inspected, when practicable, in company with the consul or consular agent of the nation to which the vessel belongs.

5. The fee for such inspection shall be such as may be fixed by the Secretary of the Treasury.

6. The certifying authority at the port of departure shall certify whether vessels carrying passengers are provided with the means of carrying out the provisions of sections 4257 and 4263 of the Revised Statutes.

SEC. 4257. Every such vessel so employed in transporting passengers between the United States and Europe, and having space according to law for more than one hundred such passengers, shall have at least two ventilators to purify each apartment occupied by such passengers; one of which shall be inserted in the after part and the other in the forward part of the apartment, and one of them shall have an exhausting-cap to carry off the foul air, and the other a receiving-cap to carry down the fresh air. Such ventilators shall have a capacity proportioned to the size of the apartments to be purified, namely, if the apartment will lawfully authorize the reception of two hundred such passengers, the capacity of each such ventilator shall be equal to a tube of twelve inches diameter in the clear, and in proportion for larger or smaller apartments. All such ventilators shall rise at least four feet six inches above the upper deck of any such vessel, and be of the most approved form and construction. If it appears from the report to be made and approved, as provided in section forty-two hundred and seventy-two, that such vessel is equally well ventilated by any other means, such other means of ventilation shall be deemed to be a compliance with the provisions of this section.

SEC. 4263. The master of any vessel employed in transporting passengers between the United States and Europe is authorized to maintain good discipline and such habits of cleanliness among passengers as will tend to the preservation and promotion of health; and to that end he shall cause such regulations as he may adopt for this purpose to be posted up, before sailing, on board such vessel, in a place accessible to such passengers, and shall keep the same so posted up during the voyage. Such master shall cause the apartments occupied by such passengers to be kept at all times in a clean, healthy state; and the owners of every such vessel so employed are required to construct the decks and all parts of the apartments so that they can be thoroughly cleansed; and also to provide a safe, convenient privy, or water-closet, for the exclusive use of every one hundred such passengers. The master shall also, when the weather is such that the passengers cannot be mustered on deck with their bedding, and at such other times as he may deem necessary, cause the deck occupied by such passengers to be cleansed with chloride of lime, or some other equally efficient disinfecting agent. And for each neglect or violation of any of the provisions of this section, the master and owner of any such vessel shall be severally liable to the United States in a penalty of fifty dollars, to be recovered in any circuit or district court within the jurisdiction of which such vessel may arrive or from which she is about to depart, or at any place where the owner or master may be found.

7. For the purpose of isolating the sick, especially those suffering from contagious or infectious diseases, every steamship or other passenger vessel shall have two compartments or spaces to be used as hospitals, one for men and the other for women. These hospitals shall, when practicable, be constructed on the main deck, or on the deck next below the uppermost deck of the vessel.

8. Every vessel before taking on cargo or passengers shall be clean and dry, and the certifying officer may, at his discretion, require that it shall be thoroughly disinfected if last from an *infected* port, or if the port of departure be itself *infected*. The examination of the vessel as to cleanliness shall be made before the cargo is taken on, and shall extend to all accessible parts, especial care being taken to note upon the bill of health the presence of decayed wood.

9. Earth and porous stone shall not be used for ballast if avoidable.

10. Merchandise or articles known to be infected shall not be received or taken on board.

11. In case the port is *infected*, the certifying authority may require that the officers, crew, and passengers shall be examined by a medical officer or physician selected for that purpose, and the result reported to him not more than twenty-four hours before certifying to the bill of health.

If small-pox exists at the port, the certifying authority shall require that the medical examination above provided shall extend to all passengers, as well as to the officers and crew, for the purpose of determining their protection against small-pox, and every person found unvaccinated, or not satisfactorily protected, shall be properly vaccinated before the vessel leaves the port, and a record of such vaccinations, including the name of each individual vaccinated, and the date of vaccination, shall be given to the master of the vessel, to be by him delivered to the quarantine authority at the port of arrival.

12. Bills of health can be considered valid only when delivered within twenty-four hours last preceding departure. If the departure is delayed beyond this period the bill must be *visé'd* by the authority delivering it, stating whatever changes have taken place in the sanitary condition of the port, vessel, officers, crew, or passengers.

13. When the port of departure or its vicinity is *infected*, that fact shall be noted in the bill of health, and when the sanitary or other local authority of the port declares the existence of such infection, the bill of health shall give the date of the declaration.

14. A port shall not be considered infected by reason of the existence of contagious or infectious disease confined within the limits of the quarantine station of such port.

15. Physicians attached to sea-going vessels shall be specially charged with the duty of watching their sanitary condition and the health of their officers, crew, and passengers. On arrival of the vessel they shall report to the health officer of the port the sanitary history of the voyage.

16. In case of the occurrence at sea of Asiatic cholera, yellow fever, plague, small-pox, relapsing fever, or typhus fever, the wearing apparel and bedding used by those affected with such disease shall be boiled for not less than two hours, or burnt or sunk.

17. Captains, owners, or agents of vessels shall, at the port of departure, be required to answer, under oath, to the consuls or sanitary officers all questions as to the sanitary condition of the vessel, &c.

18. Whenever any vessel shall leave an *infected* foreign port, or having on board goods or passengers coming from any place or district infected with Asiatic cholera, yellow fever, or plague, shall leave any foreign port bound for any port in the United States, the consul, consular officer, or other representative of the United States at or near such port may, at his discretion, immediately give information thereof by telegraph to the National Board of Health, at Washington, D. C., reporting the name, date of departure, and port of destination of such vessel. The cost of such telegrams will be paid by the National Board of Health.

19. All merchant ships or vessels from any foreign port where any contagious or infectious disease exists, and bound for any port of the United States, must present to the health officer at the quarantine station of such port evidence that these rules and regulations have been complied with in order that such vessel may enter such port, discharge its cargo, and land its passengers.

J. L. CABELL,
THOMAS J. TURNER, *President National Board of Health.*
Secretary National Board of Health.

OFFICE OF THE PRESIDENT OF THE UNITED STATES,
November 14, 1881.

The foregoing rules and regulations are hereby approved.

CHESTER A. ARTHUR.

ADDITIONAL RULES AND REGULATIONS NECESSARY TO PREVENT THE INTRODUCTION OF SMALL-POX INTO THE UNITED STATES FROM FOREIGN COUNTRIES.

1. That all persons coming from or through any foreign port or place in which small-pox exists, who after the 14th day of November, 1881, shall arrive at any port of entry within the United States, shall be subjected to examination as regards their protection from that disease by the proper health authorities of the State within which such port lies, or in case such authorities shall fail or refuse to enforce this rule, then by some officer or other proper person to be designated by the President of the United States.

2. That in case any person so arriving shall refuse to submit to such examination, or upon undergoing the same shall be found not sufficiently protected from small-pox, such person, and in case he or she be not *sui juris*, then also the person having him or her under charge, shall be detained in quarantine until he or she shall have been properly vaccinated, or shall have passed the period of incubation from date of last exposure.

J. L. CABELL,
THOMAS J. TURNER, *President National Board of Health.*
Secretary National Board of Health.

OFFICE OF THE PRESIDENT OF THE UNITED STATES,
November 14, 1881.

The foregoing additional rules and regulations are hereby approved.

CHESTER A. AUTHUR.

ABSTRACTS FROM CONSULAR REPORTS.

ADEN, ARABIA.—The sanitary administration of the Ottoman Empire report that from August 2 to September 27 there were 184 cases and 149 deaths from cholera at Aden. Of Arabs there were 21 cases and 12 deaths; of Africans, 156 cases and 130 deaths; and of Indians, 6 cases and 5 deaths. The epidemic had abated to such an extent that on September 27, the date on which the report received was closed, but one new case was reported. They also make report upon the mortality at Mecca during the week ending October 7, from which it appears that the total number of deaths from all causes was 117. Of this number there were 42 deaths from cholera.

BARBADOES, WEST INDIES.—United States Consul Robert Y. Holley reports, under date of October 22, that yellow fever has again made its appearance. Eight cases have occurred during the past week, three of which have proved fatal. The most recent cases have, however, been of mild type, and it is the opinion of physicians that in view of the cool weather, and the trade-winds which have set in, but few cases are likely to occur.

BOMBAY, INDIA.—United States Consul B. F. Farnham reports a total of 426 deaths during the week ending October 4, giving an annual death-rate of 27.10 per 1,000 of the population. Of the total number 8 are reported to have died of cholera, and 204 from other contagious or infectious diseases. He also reports that an epidemic, known as choleraic fever, is raging at Umritsur, about two thousand five hundred deaths having been reported from this cause during eleven days ending October 1. More than half of the deaths which occurred were of children, who generally died in convulsions within a few hours after seizure by the fever. The latest reports received at Bombay state that the mortality from this fever at Umritsur is nearly three hundred a day. The recent heavy rain-falls in that region are believed to have caused the epidemic; about forty inches of rain having fallen within a period during which eighteen inches is usually a maximum quantity. The ground is everywhere saturated, and the water level is scarcely a foot below the surface. Many places usually regarded as dry and healthy are now little else than swamps. The city is also in an extremely filthy condition, and the laboring classes have suffered from the epidemic to such an extent that scarcely anything can be done towards improving the sanitary condition of the place. The medical staff of the district has been reinforced from Lahore, but as yet there are no indications of abatement of the epidemic.

BUDAPESTH, HUNGARY.—Henry Stern, United States consul, reports a total of 430 deaths during the two weeks ending October 15, giving an annual death-rate of 29.6 per 1,000 of population. Among the deaths reported there were 16 from small-pox, 10 from diphtheria, 8 from typhoid fever, and 11 from scarlet fever.

CAPE TOWN, CAPE OF GOOD HOPE.—United States Consul W. W. Edgecomb reports the city free from epidemic diseases. Twenty deaths from all causes were reported during the week ending October 10, giving an annual death-rate of 29.7 per 1,000 of the population. The weather is hot and oppressive, the mean temperature during the week being 80°.

HAVANA, CUBA.—Henry C. Hall, United States consul-general, reports a total of 105 deaths from all causes during the week ending October 29, giving an annual death-rate of 28 per 1,000 of the population. Among the deaths reported there were 13 from yellow fever, 1 from small-pox, and 3 from typhoid fever.

HONOLULA, HAWAIIAN ISLANDS.—D. A. McKinley, United States consul, transmits mortality reports for the months of August and September. The total number of deaths reported in August was 34, being 14 less than the number registered in the corresponding period of 1880. The number of deaths in September was 38, which was 3 less than in September, 1880. Among the deaths reported during the two months were 12 from consumption, 4 from diarrhœal diseases, 2 from fever, and 1 from small-pox.

LEITH, SCOTLAND.—United States Consul J. A. Leonard transmits the report of deaths in the eight principal towns in Scotland during the week ending October 29. The total number of deaths registered was 500, giving an annual death-rate of 21.6 per 1,000 of the population, estimated at 1,206,057. This rate is 2.6 below that for the corresponding week of last year, and 0.2 above that for the previous week of the present year. The lowest mortality was recorded at Aberdeen, viz, 17.2 per 1,000, and the highest in Perth, viz, 29.6

per 1,000. Of the total number of deaths reported there were 99 from acute diseases of the organs of respiration, 13 from whooping-cough, 18 from diphtheria, 21 from scarlet fever, 24 from diarrhœal diseases, and 10 from measles.

LONDON, ENGLAND.—J. Nunn, United States vice-consul-general, reports a total of 1,586 deaths from all causes in London during the week ending October 22, which exceeded by 80 the average number in the corresponding week of the last ten years. The annual death-rate, which had been 16.6, 18.6, and 19.9 in the three preceding weeks, further rose to 21.6 during the week embraced in the report. Of the total number of deaths there were 14 from small-pox, 30 from measles, 48 from scarlet fever, 21 from diphtheria, 39 from whooping-cough, 5 from typhus fever, 53 from enteric fever, 9 from ill-defined forms of combined fever, and 18 from diarrhœa. There were thus 237 deaths referred to these diseases, being 16 above the average number in the corresponding week of the last ten years. Although the number of deaths from small-pox and measles has declined since the last weekly report, it is still in excess of the weekly average. The deaths from enteric fever during last week were 53, being an increase of 20 as compared with the previous week, and 30 in excess of the weekly average. The deaths from diseases of the respiratory organs have been increasing rapidly during the past eight weeks, and rose from 279 in the preceding week to 319 in the week under review. Of this number, which also exceeds the weekly average by 17, 182 were attributed to bronchitis, and 96 to pneumonia. The mortality report for the week ending October 22, in twenty of the largest English towns, including London, shows a total of 3,097 deaths from all causes, equal to an annual death-rate of 21.2 per 1,000 for the aggregate population, estimated at 7,608,775. Scarlet fever, which has been epidemic in many places, still prevails in most of the towns, the deaths from this disease being 90 during the week outside of London. Of this number 32 occurred at Hull.

MELBOURNE, AUSTRALIA.—United States Consul O. M. Spencer transmits the report of the government statist on the vital statistics of Melbourne and suburbs for the month of July. The statistical district embraces a radius of ten miles, and is divided into twenty-three districts, having an aggregate population of 282,981. The total number of deaths, from all causes during the month was 446, giving an annual death-rate of 18.8 per 1,000 of the population. After making allowance for the increase of population, the number of deaths registered during the month was still in excess of the average for the corresponding period in the last ten years.

The number of deaths ascribed to zymotic diseases was 68, being an excess of 5 over the number registered in the previous month. Of the total number from this class of diseases, there were 3 from scarlatina, 5 from diphtheria, 7 from croup, 7 from whooping-cough, 12 from typhoid fever, and 6 from diarrhœal diseases. The number of deaths from phthisis pulmonalis was 55, and from acute diseases of the respiratory organs 89. Of the total number of deaths, 149, or 33.4 per cent., were of children under 5 years of age.

NAPLES, ITALY.—United States Consul E. H. Smith transmits reports for thirteen weeks ending September 17. During this period there was a total of 6,014 deaths reported, giving an annual death-rate of 52.1 per 1,000 of the population. The principal causes of death were as follows: From cerebro-spinal fever, 689; from diseases of the respiratory organs, 1,014; from tuberculous diseases, 680; from typhoid fever, 255; and from small-pox, 7.

NEWCASTLE-UPON-TYNE, ENGLAND.—E. R. Jones, United States consul, transmits the mortality report for the quarter ending October 1. The total number of deaths registered during the quarter was 781, representing an annual death-rate of 21.4 per 1,000 of the estimated population, against an average death-rate of 23.0 per 1,000 for the third quarter in the three preceding years. Among the deaths reported were 56 from phthisis pulmonalis, 80 from diseases of the respiratory organs other than consumption, and 152 from zymotic diseases. Of the total number of deaths, 367, or 47 per cent., were of children under 5 years of age.

QUEENSTOWN, IRELAND.—E. P. Brooks, United States consul, reports 18 cases and 3 deaths from typhus fever during the week ending October 29.

SANTA CRUZ, TENERIFFE.—United States Consul W. H. Dabney reports a total of 25 deaths from all causes during the two weeks ending October 15, of which number 7 deaths were caused by measles. This disease is prevailing as an epidemic, 188 cases having been reported in the two weeks.

DIAGRAM TO SHOW THE PROPORTION OF DEATHS PER 1,000 PER ANNUM AS RECORDED IN THE MORTUARY REPORTS FURNISHED THE NATIONAL BOARD OF HEALTH FOR THE FOUR WEEKS ENDING OCTOBER 8, 15, 22, AND 29, 1881, FROM THE FOLLOWING PLACES.

[Oblique lines represent mortality under 5 years; horizontal lines represent mortality over 5 years; both represent total mortality per 1,000 per annum.]

States.	Cities.	Total population, according to U. S. Census of 1880.	Number of deaths under 5 years in 4 weeks.	Total number of deaths in 4 weeks.	Annual death-rate per 1,000 for 5 years for 4 weeks.	Total annual death-rate per 1,000 for 4 weeks.

National Board of Health

BULLETIN.

VOL. 3.] WASHINGTON, D. C., SATURDAY, NOVEMBER 26, 1881. [No. 22.

SANITARY LEGISLATION IN NEW HAMPSHIRE.

An act to establish a State board of health.

Be it enacted by the senate and house of representatives in general court convened:

SECTION 1. The governor, with the advice and consent of the council, shall appoint four persons, three of whom shall always be physicians and one a civil engineer, who with the governor and attorney-general of the State shall constitute a State board of health. Of the four persons first appointed, two shall serve for two years and two for four years from the time of their appointment; and the governor shall thereafter in the same manner biennially appoint two persons to be members of the board to hold their offices for four years; and all vacancies shall be filled in the same manner for the unexpired term.

SEC. 2. The board thus formed shall meet in the state-house at least once in every three months, and three members shall constitute a quorum for business. They shall organize by electing one of their number president, and shall appoint a suitable person, who shall be a physician and may be a member of the board, to be their permanent secretary and executive officer, who shall hold his office at the pleasure of the board so long as he shall faithfully discharge the duties thereof. They shall institute the necessary rules to govern the organization and establish the amount of salary that the secretary shall receive; and no member of this board shall receive any compensation for services except the secretary, save that the actual expenses incurred while engaged in the duties of the board, which shall be rendered in an itemized account, after being approved by the finance committee of the board and the State treasurer, shall be paid out of an appropriation made for its support. The salary of the secretary shall be paid quarterly in the same manner from the same appropriation.

SEC. 3. The governor and council shall designate a room in the state-house, suitably appointed, as a place for the board to hold their meetings, and to be used as an office for the secretary of the board. This room shall be kept open for the benefit of the public the same as the other public offices of the State, and information pertaining to the sanitary condition of the State, or any suggestions or regulations necessary to guard against epidemic or contagious disease, shall be furnished from this office to citizens, or to town or county authorities, without expense; and the board shall also take cognizance of the sanitary condition of all public buildings, hospitals, and grounds within the State that are now occupied as penal institutions, almshouses, or reformatory institutions, whether State or county, without other remuneration than such as is provided for in section two of this act.

SEC. 4. The board shall take charge of the vital statistics of the State, and enforce the provisions of chapter one hundred and eighty-one of the general laws.

SEC. 5. The board shall, whenever directed by the governor and council, assist selectmen to enforce the provisions of chapter one hundred and sixteen of the general laws, with compensation as provided in section two of this act.

SEC. 6. The board shall take cognizance of the interests of health and life among the people of the State, making sanitary investigations, and advising and assisting local boards of health in conducting special investigations into the cause of epidemics and the sources of mortality; and they shall collect such information in respect to these matters as may be useful to the people of the State, and report the same through the governor and council, in the same manner as other State officials are now required to do.

SEC. 7. The report to the governor and council shall also contain a detailed statement of the expenses of the board, including the salary and expenses of the secretary; but the total amount paid for the expenses of the board shall not exceed three thousand dollars in any one year, which amount is hereby annually appropriated for this purpose, to be paid by the State treasurer as specified in section two of this act.

SEC. 8. This act shall take effect from the date of its passage, and all other acts or parts of acts inconsistent with this act are hereby repealed.

Approved August 16, 1881.

SMALL-POX IN BALTIMORE.

Dr. James A. Steuart, commissioner of health, reports the appearance of small-pox in Baltimore about the 1st of the present month. The disease was introduced by a family just arrived from Allegheny City, Pa., one of its members, a child, being sick with what proved to be small-pox. Sixteen cases have developed since, all of which are directly traceable to this first case.

The health department is using every effort to prevent the spread of the disease. Sanitary inspectors are busily engaged, and physicians are inspecting all the schools for the purpose of ascertaining that every child in attendance is vaccinated. The following is the city ordinance bearing upon the subject:

HEALTH DEPARTMENT, CITY HALL,
Baltimore, November 16, 1881.

In view of a threatened invasion of small-pox into this city, the special attention of the public is called to the following ordinance, the requirements of which will be strictly enforced by this department.

JAMES A. STEUART, M. D.,
Commissioner of Health.

An ordinance to prevent the spread of disease.

SECTION 1. *Be it enacted and ordained by the mayor and city council of Baltimore*, That it shall be the duty of all physicians who may be in attendance in any family whose child or children may be attending any of the public schools of this city, which family may have a case or cases of scarlet fever, diphtheria, measles, small-pox, chicken-pox, whooping-cough, or any other contagious disease, to give a certificate of the same to the parents or parent of the child or children so diseased as soon as the disease is developed, and it shall be the duty of the parents or parent, as soon as the physician certifies that contagious disease exists in his, her, or their house, to notify the principal of the school attended by his, her, or their children within twenty-four hours; and for a failure of parent or physician to comply with the provisions of this section, shall be fined ten dollars for every offense, said fine to be collected as other fines are collected.

SEC. 2. *And be it further enacted and ordained*, That if there be no physician attending in cases of disease mentioned in section one of this ordinance, it shall be the duty of the parents or parent to report the disease to the principal of the school attended by his, her, or their child or children within twenty-four hours from the time the disease is known to be contagious; and any parent who fails to comply with the requirements of this section shall be fined ten dollars for every offense, said fine to be collected as other fines are collected.

SEC. 3. *And be it further enacted and ordained*, That if any parent or physician shall notify any public-school teacher of the city that scarlet fever, diphtheria, measles, small-pox, chicken-pox, whooping-cough, or any other contagious disease exists in any family whose child or children are attending any of the public schools of this city, then it shall be the duty of the principal of the school to exclude the child or children of said family from the school until the attending physician certifies that all danger from contagion has passed; the principal of any public school who fails to comply with the requirements of this section shall be fined ten dollars for every offense, said fine to be collected as other fines are collected.

SEC. 4. *And be it further enacted and ordained*, That if any teacher or teachers reside, board, or lodge in any house where a child or children in such house is suffering with scarlet fever, diphtheria, measels, small-pox, chicken-pox, whooping-cough, or any other contagious disease, of which fact the said teacher has been cognizant, then it shall be the duty of said teacher to certify to the same to a member of the school board, and such teacher shall not perform his or her duties in any public school in this city until a physician attending such case or cases of contagious disease shall certify that all danger from contagion has passed; and for a failure of any teachor to so notify the school board, or so absent him or herself from his or her duties until all danger shall have passed, as certified by the attending physician, such teacher shall be fined ten dollars for every such offense, said fine to be collected as all other fines are collected.

SEC. 5. *And be it further enacted and ordained*, That all ordinances or parts of ordinances inconsistent with the provisions of this ordinance be, and the same are hereby, repealed.

Approved February 21, 1880.

FERDINAND C. LATROBE, *Mayor.*

NOTICE.—In filling the reports on the postal cards for cities and hospitals, the figures are frequently so placed between the lines as to leave the disease intended entirely uncertain, except in cases where the judgment of the compiler may enable him to determine which is meant. This may be avoided by a stroke of the pen after the disease to be recorded. The *total* numbers should be placed in their proper columns, and no figures placed immediately after the word *total* will be noted in the tables. Those who report *still-births* will please note them separately, as they are not included in the tables of mortality in the BULLETIN.

NOTICE.—Extra copies of the BULLETIN will be furnished at this office at the rate of *five cents* per copy. Notice of at least one week should be given when a large number is required.

NOTICE.—All official communications to the National Board of Health should be addressed to the *Secretary* of the Board, Dr. T. J. Turner, U. S. N. Correspondents and others whose writing may be for publication are reminded that much inconvenience is caused by writing on both sides of the paper.

ABSTRACTS FROM CONSULAR REPORTS.

ADEN, ARABIA.—James S. Williams, United States consul, reports to the Department of State, under date of October 12, that the cholera has disappeared from Aden, no cases having occurred since September 27. He also reports that in consequence of the appearance of cholera in the island of Java all vessels arriving at Aden from ports in that island are subjected to such detention in quarantine as may be deemed necessary by the President.

ALGIERS, AFRICA.—Alex. Jourdan, United States consul, reports 72 deaths from all causes during the week ending August 28, giving an annual death-rate of 54.9 per 1,000 of population. He states that the city, adjacent country, port, and shipping are free from any suspicion of plague, cholera, or other contagious diseases.

ASPINWALL, UNITED STATES OF COLOMBIA.—United States Vice-Consul James Thorington reports, under date of November 5, that the city is in good sanitary condition, and continues free from contagious or infectious diseases.

BARBADOES, WEST INDIES.—Robert Y. Holley, United States consul, reports, under date of November 2, that there are still a few cases of yellow fever scattered through the country districts, though the city is believed to be free from the disease. In view of the favorable weather which now prevails, little fear is entertained of the reappearance of the fever.

BOMBAY, INDIA.—United States Consul B. F. Farnham reports a total of 457 deaths during the week ending October 11, being 31 more than in the preceding week, 12 less than in the corresponding week of last year, and 24 less than the average for the corresponding period of the past five years. The annual death-rate per 1,000 of the population was 29.05. Of the total number of deaths there were 11 from cholera, being an increase of 5 as compared with the preceding week, and of 10 as compared with the corresponding period of last year. There were 88 deaths from remittent fever, which was an increase of 8 since last week, though the number was 40 less than in the week ending October 12, 1880. The deaths from diseases of the respiratory organs, diarrhœa, and dysentery were 77, 36, and 17 as against 46, 16, and 22, respectively, in the corresponding week of last year.

CALCUTTA, INDIA.—A. B. Cobb, United States vice-consul-general, transmits reports for the two weeks ending October 1. The total number of deaths from all causes in the week ending September 24 was 193, of which number 20 died from cholera. The deaths during the week ending October 1 numbered 214, of which there were 17 from cholera. The annual death rate per thousand of population was 23.4 and 25.9 for the weeks, respectively.

CAPE HAYTIEN, HAYTI.—Stanislas Goutier, United States consul, reports, under date of October 22, that small-pox still prevails, though it appears to have assumed a less virulent form than existed at the date of his last report. Under date of October 29, he states that the number of cases of small-pox has increased. There is, however, no sickness among the shipping.

FREETOWN, SIERRA LEONE, WEST COAST OF AFRICA.—Judson A. Lewis, United States consul, reports, under date of September 30, that the epidemic of small-pox has abated, but two deaths from the disease having occurred during the month, and but five new cases having been reported.

HAVANA, CUBA.—Henry C. Hall, United States consul-general, reports 9 deaths from yellow fever and 2 from small-pox during the week ending November 5.

KOBÉ, JAPAN.—J. Stahel, United States consul, reports 29 cases and 24 deaths from cholera during the two weeks ending October 15.

LONDON, ENGLAND.—J. Nunn, United States vice-consul-general, transmits the report of deaths in London and twenty large English towns during the week ending October 29. In London the total number of deaths registered was 1,588, which exceeded by 29 the average numbers in the corresponding weeks of the last ten years. The annual death-rate was 21.6 per 1,000, as in the preceding week. Of the total number of deaths there were 24 from small-pox, 19 from measles, 65 from scarlet fever, 25 from diphtheria, 29 from whooping-cough, 4 from typhus fever, 49 from enteric fever,

and 19 from diarrhœa. The number referred to these diseases was 6 more than the average number in the corresponding week of the last ten years. The deaths from diseases of the respiratory organs, which have been steadily increasing during the past eight weeks, rose to 376 during the week for which the report is made, being an increase of 57 as compared with the previous week. Scarlet fever which has been epidemic in several of the large towns, as yet shows no signs of abatement. The largest proportional fatality occurred in Hull, Sunderland, Brighton, and Nottingham. In Hull 39 fatal cases were recorded, being a higher number than in any previous week of the present epidemic, and making a total of 357 since the beginning of July.

The total number of deaths from all causes registered during the week in the twenty large towns was 3,202, and the average annual death-rate per 1,000 was 22.0, ranging from 13.2 in Plymouth to 33.3 in Hull.

MECCA, ARABIA.—E. A. Van Dyck transmits from the office of the consul-general at Cairo, Egypt, the report of Dr. Wortabel, health officer at Mecca, for the week ending September 23. The total number of deaths from all causes was 90, of which number there were 18 from cholera. Additional reports received via Constantinople state that there were 14 deaths from cholera during the week ending October 13.

PORT AU PRINCE, HAYTI.—John M. Langston, United States consul-general, reports, under date of November 7, that the epidemic of small-pox still continues at Cape Haytien. The disease prevails in confluent form and has caused great mortality, chiefly among the common people. But two or three mild cases of the disease are known to have occurred at Port au Prince, and at date of the report no cases were known to exist, though it is reported that the disease has made its appearance in the plains at some distance from the city. Steps are being taken by the authorities to secure the vaccination of children, and to as great an extent as possible of adults, in order that the community may be protected and the danger of an epidemic averted.

RIO DE JANEIRO, BRAZIL.—Thomas Adamson, United States consul-general, reports a total of 364 deaths from all causes during the two weeks ending October 22. Of this number there were 81 from consumption, 10 from small-pox, 7 from typhoid fever, 8 from pernicious fever, and 1 from yellow fever. The annual death-rate per 1,000 during the period embraced in the report was 25.6.

SAN JUAN, PORTO RICO.—Edward Corday, United States consul, reports 12 cases and 11 deaths from yellow fever during the months of August and September. Two cases of small-pox were also reported during September. The cases of yellow fever occurred among the soldiers recently arrived from Spanish provinces. The city of San Juan and the surrounding districts are reported in good sanitary condition.

SANTIAGO DE CUBA, CUBA.—United States Consul John C. Landreau reports 14 cases and 8 deaths from yellow fever, and 8 cases and 3 deaths from typhoid fever during the month of October. All of the cases of yellow fever occurred in the military hospital, which is located at a distance from the city, on the other side of the harbor.

SHANGHAI, CHINA.—O. N. Denny, United States consul-general, reports 9 cases and 4 deaths from cholera during the two weeks ending October 11.

ST. PETERSBURG, RUSSIA.—Edgar Santon, United States consul, reports 539 deaths from all causes during the week ending October 15, giving an annual death-rate of 41.3 per 1,000 of population. Of the total number of deaths, there were 4 from small-pox, 40 from typhoid and kindred fevers, and 39 from other contagious or infectious diseases. Of the total deaths reported, 229, or 42.5 per cent., were of children under 5 years of age.

ST. THOMAS, WEST INDIES.—V. V. Smith, United States consul, reports 1 death from yellow fever during the week ending October 21.

He also reports, under date of October 27, that an order has been issued by the authorities subjecting all vessels from Barbadoes to a quarantine of ten days, unless it can be shown that the vessels have merely called at the island, and have not had intercourse with the people. This order has been issued in consequence of the dangerous character of the yellow fever which has appeared at Barbadoes.

The consul states that no cases of the fever have occurred at St. Thomas, but that several persons who contracted the disease at Barbadoes have died in the quarantine hospital.

SYDNEY, NEW SOUTH WALES.—The report of the registrar general shows a total of 357 deaths from all causes in the metropolitan division, embracing Sydney and suburbs, during the month of August, being 40 less than the number registered during August of last year. The annual death-rate per 1,000 of inhabitants during the month was 19.1. The annual death-rate per 1,000 in the city proper was 25.6. Among the causes of death in the registration district are the following: Phthisis pulmonalis, 46; bronchitis, 29; pneumonia, 25; congestion of the lungs, 8; typhoid fever, 10; diarrhœa, 5; and from measles, croup, and diphtheria, 1 each.

TANGIER, MOROCCO.—United States Consul Felix A. Mathews transmits reports for the three weeks ending September 24. He states that the city is in bad sanitary condition, and that intermittent fevers are prevailing. The total number of deaths from all causes during the period embraced in the report was 55, giving an annual death-rate of 63.5 per 1,000 of the population.

TUXPAN, MEXICO.—Dr. A. M. Boyd transmits mortality reports for the months of August, September, and October, during which period there were 67 deaths from all causes, giving an annual death-rate of 37.2 per 1,000 of the population. The principal causes of death are given as follows: From malarial fever, 25; from diarrhœal diseases, 8; and 5 from consumption. No diseases of an epidemic or contagious character have made their appearance during the summer, and the port is in good sanitary condition.

VICTORIA, BRITISH COLUMBIA.—Allen Francis, United States consul, reports, under date of October 29, that a number of cases of pneumonia have recently been reported in Victoria. He also reports that a very virulent form of small-pox is prevailing in the eastern part of Washington Territory.

He reports 4 deaths during the week ending November 4, two of which were from consumption. He also states that small-pox is prevailing east of the mountains in Washington Territory.

VIENNA, AUSTRIA.—United States Consul James R. Weaver reports that during the week ending October 22 there were 311 deaths reported, giving an annual death-rate of 22.1 per 1,000 of inhabitants. Of the total number of deaths registered, there were 71 from consumption, 12 from small-pox, 4 from scarlet fever, 7 from diphtheria, and 2 from typhoid fever.

WARSAW, RUSSIA.—Joseph Rawicz reports 26 deaths from small-pox during the week ending October 15. The total number of deaths reported during the week was 298, and the annual death-rate per 1,000 of the population was 40.9.

REPORTS OF CORRESPONDENTS OF THE NATIONAL BOARD OF HEALTH.

BIDDEFORD, ME.—E. F. Pilsbury, postmaster, writes, under date of November 14, that the small-pox which prevails in that city is confined chiefly to the French portion of the population. The first case occurred in a family which had been on an excursion to Canada, and it has been ascertained that one of its members had while there visited a family afflicted with the disease.

CINCINNATI, OHIO.—Dr. A. J. Miles, health officer, reports 15 cases of small-pox during the week ending November 12.

ELGIN, ILL.—William F. Sylla, city clerk, under date of November 17, reports two new cases of small-pox. He states also that the board of health is making strenuous efforts to prevent the disease from spreading.

EASTON, PA.—Dr. Isaac Ott reports the organization of a board of health for the purpose of preventing the spread of small-pox, of which 8 cases were reported during September and October. Three of these cases were of confluent form; they occurred in unvaccinated persons and terminated fatally. Physicians have been appointed to attend to vaccination, and no children are admitted to the schools unless they are shown to be thus protected from the disease. No new cases have been reported since October 5.

He also states, under date of November 8, that a board of health has been organized at that place, of which he has been chosen secretary.

GUNN CITY, MO.—Dr. H. H. Gilliland writes, under date of November 11, that typhoid fever is prevalent at that place.

LITTLE ROCK, ARK.—J. A. Dibrell, jr., secretary of the State board of health, reports one case of small-pox. He states that the disease was contracted in Chicago; that it developed in one of the hotels in Little Rock, and that many persons have been exposed to the contagion. He also reports that malarial fever of a severe form, typho-malarial, and typhoid fever are unusually prevalent.

MADISON, IND.—Dr. James Roberts reports 3 deaths from small-pox during the week ending November 12.

MOLINE, ILL.—Dr. C. Piper reports, under date of November 11, that typhoid fever is still prevalent.

PITTSBURG, PA.—Dr. W. Snively, registrar, reports 53 cases of small-pox and 22 deaths during the week ending November 12.

RAHWAY, N. J.—Dr. E. M. Hunt, secretary of the State board of health, writes, under date of November 14, that small-pox has appeared at Rahway and Milton, a suburban village. Two cases have been reported in Rahway, and 10 cases and 3 deaths in Milton. The first cases were unrecognized and a great many persons were exposed to the contagion. The result cannot yet be known, as sufficient time has not elapsed for the development of the disease. In the mean time the health authorities are using all proper methods of limitation and prevention.

SPRINGFIELD, MASS.—Dr. Daniel Clark reports the appearance of small-pox during the week ending November 12, and the disease is believed to have been contracted while sorting rags.

TERRE HAUTE, IND.—Dr. M. H. Waters writes, under date of November 15, that a continued fever, generally believed to be malarial, has prevailed in that city during the past four weeks. Quinine is not only powerless to control the disease, but is found to be positively injurious if its use is persevered in. The total number of deaths from all causes reported during September was 41, and in October the number increased to 45, giving an annual death-rate of 20.07 per 1,000 of estimated population.

VINELAND, N. J.—Dr. Charles Brewer reports 5 deaths during the month of October. He also reports that the well-water in that vicinity has in a number of cases been found to contain animal matter, and it is suggested that these wells should be cleansed at once and a careful inspection be made of all the wells upon which the people depend for their water supply.

YONKERS, N. Y.—Dr. Valentine Brown reports, under date of November 12, that scarlatina and diphtheria are on the increase, and Dr. Balch reports, under date of November 19, that measles have become epidemic.

THE NATIONAL BOARD OF HEALTH.

OFFICERS.

JAMES L. CABELL, LL. D., &c ..... *President.*

BULLETIN.

VOL. 3.] WASHINGTON, D. C., SATURDAY, DECEMBER 3, 1881. [No. 23.

HISTORICAL NOTES OF THE EARLY MEASURES TAKEN TO PREVENT THE INTRODUCTION AND SPREAD OF SMALL-POX AND YELLOW FEVER IN NEWBURYPORT, MASS.

[By CHARLES J. BROCKWAY, *of Newburyport, Mass.*]

Newbury, Mass., was settled, incorporated, and paid its first tax in the spring of 1635.

SMALL-POX.

Newbury, 1691, March 10: Voted, "That the selectmen be desired to take care that persons infected with the small-pox should be confined, and that their families should not suffer if they themselves were unable to provide for them." (From records.)

1721: The small-pox prevailed extensively in New England. More than 800 died with it in Boston.

1759: In November made its appearance in Newbury on "The Plains," so-called (now a part of Newburyport). The selectmen were directed to fence in the infected district during its continuance. The town sent to Boston for physicians and nurses. "The custom of shutting up the sick in small and heated rooms greatly aggravated the disease." It ceased in July of the following year, 1760.

1763, May 12: Newbury voted "to build a pest-house in the 'Great Pasture,' 38 by 28, one story high."

1764, January 27: Voted, "That the selectmen provide a house in some proper place to move to or carry any person infected with the small-pox, if any case should occur before the pest-house be finished or made convenient for that purpose." Also voted, "That the selectmen provide suitable gates at each bridge (two bridges named in town at this time); also to employ one man to keep each gate, and also to fence across any road, to prevent any person infected with the small-pox from coming into town, as soon as the general court gives the power." And the selectmen were authorized to see that no vessel come up the river above Hook's Point till an examination is made.

1764, January 28: That part of Newbury, now Newburyport, was incorporated as a separate town, and in May following, the 15th, Newbury voted "to dismiss the guards that have been employed at the bridges in the town relating to the small-pox," and "the selectmen inform the selectmen of Newburyport that the guards to keep the gates had been dismissed."

Newburyport, April 18, 1764: Town meeting called "to see what is proper to be done to prevent the infection of the small-pox being brought into this town."

Voted, "That Mr. Ralph Cross's vessel, late from Boston, where the small-pox is prevalent, be ordered by the selectmen of Newburyport down below the half-tide rocks, and there lay a proper time, or as the law directs."

Voted, "That the guards be kept up as usual at the bridges, provided the selectmen of Newbury pay their proportion of the charge."

(The half-tide rocks here mentioned, in the river Merrimac, are distant about three-fourths of a mile from the first wharves built on this river and around which the "water-side" people then centered.)

March 19, 1765: Newburyport joined Newbury in establishing a pest house, or hospital, in the "Great Pasture."

1769, May 22: A special meeting of the town, Newburyport, was called to see if the town would vote to build a "house" on Plum Island (by the ocean, and several miles distant from the pest-house already built in the Great Pasture) "for use of infectious persons that may come, or may be taken with small-pox in said town."

June 26, 1769: "Voted to build a house on Plum Island" for the purpose above mentioned, and to see if the town of Newbury will bear its part of the expense, and consent to the use of the land, which was agreed to.

1782: The pest-house on Plum Island was abandoned and the materials sold, the hospital in the Great Pasture remaining for use when needed.

1788, May 16: It was "voted, if any person or persons shall, from or after this date, in violation of the law of this State, be inoculated, or shall inoculate others for the small-pox, the selectmen of this town be desired to prosecute them in the law for such offense in behalf of and at the expense of this town."

Voted, "That the selectmen be desired to use every means in their power, by placing suitable men as guards and otherwise, to prevent the infection of the small-pox from spreading any further in this town or its neighborhood, and not to suffer any person to come from the pest-house until they are thoroughly cleansed."

1792, September 3: Voted, "That the selectmen and a committee of (three persons, previously chosen) be directed to use all prudent measures to prevent the introduction and spreading of the small-pox in this town, and to ask the town of Newbury to join in this measure until further order of the town." Voted, also, "to repair the pest-houses in Common Pasture."

1793, October 22: It was "voted to build (another) hospital for inoculating with the small-pox, either in the town of Newbury[*] or in this town," and the committee were directed "to proceed without delay." An appropriation of £500 was made for this purpose; and it was also voted to employ a physician "to attend *statedly* at the pest-houses now infected with the small-pox."

October 25, 1793: Voted to choose a committee of twenty to visit the inhabitants of this town in their several wards daily to inquire into the state of their health, and to give the earliest information to the selectmen of any symptoms of the small-pox.

1793, November 5: Voted, That the town will furnish the hospital with all necessary furniture, including bedsteads and bedding, one pair of blankets, and a pair of sheets for each bed.

Voted, That no straw or feather bed be allowed to be brought away from the hospital.

Voted, "That any inhabitant of this town (belonging here) may have liberty to be inoculated in said hospital free of any expense for the use of the town's property."

Voted, "That persons belonging to any other town may have liberty to be inoculated with the small-pox in said hospital, provided enough of the inhabitants of this town should not appear to occupy the hospital within seven days after public notice for every class except the first."

Voted, "That with every class of patients, two of the poor of the town, or their children, shall, if presented by the overseers, be admitted gratis, and entitled to the same care and attention as other patients. And in case the patients should not be admitted by classes, then the overseers are to have the liberty of presenting two, for every month in the year, as before mentioned."

Voted, "That when any (cases) accidentally break out with the small-pox in this town, or arrive with that disorder from sea, they shall be admitted on the same terms as those for inoculation, if, at the time, there should be any patients in the hospital."

Voted, "That one man at least shall constantly be kept by the physician as a guard to keep off intruders, and to see that the patients conduct agreeably to the rules and regulations."

The physician was directed to give public notice when he was ready to enter the names of persons to be inoculated in the first class; and that no preference be given to any particular person or persons; but if a greater number apply than can be admitted, after four hours' notice, it was to be decided by lot who should be received, but families were not to be separated.

1794, March 13: Voted, "That no person be inoculated in the hospital in this town from and after the 10th of April next until the further order of the town; provided, that liberty be and hereby is given to such persons as may be exposed to take the small-pox in the natural way, to be inoculated by permission of the selectmen."

The alarm arising from the spreading of the small-pox in the year previous, 1793, appears to have subsided, as the town about this time, March 13, 1794, voted to shut up the hospital as soon as it could be done with safety to the inhabitants, but the vote was reconsidered and the above vote was substituted.

At the annual town meeting of this year, 1794, adjourned to March 14, it was voted "that the selectmen be desired to see that all filth around the hospital be buried, and every prudent measure be taken to prevent any infection being communicated therefrom," and also that the selectmen give positive orders to all pilots and others not to bring any vessel infected with the *small-pox or other pestilential* disease up to town until it has undergone a thorough cleansing.

Under the authority of the town the selectmen took action at various times touching the appearance of the small-pox, and under date of May 6, 1793, they gave the following notice by advertisement in the local newspaper published in Newburyport:

"The selectmen of Newburyport hereby positively enjoin it upon all pilots and others not to bring any vessel above the black rocks, so-called, which has had any person visited with the *small-pox* or an infectious or pestilential disease on board during her last voyage, until they have reported to the selectmen and have their permission, or they must answer to the contrary at their peril."

By order: Signed by the town clerk.

[*] Newburyport at this period was small in territory, containing only about 840 acres, niggardly accorded to the "water-side people" through the jealousy of the rural population of the old town.

The black rocks here mentioned are near the mouth of the river and about two miles from town.

The rules and regulations adopted for the government of the hospital were very stringent: "No patient shall leave it without being thoroughly smoked and cleansed," and the latter process included bathing in strong vinegar; the hair was to be shaved; no article of clothing, not even shoes, worn in the hospital were to be taken away by the patient; no visitor was allowed to enter; no conversation was to be carried on between visitor and patient unless the visitor placed himself at least 16½ feet distant and to the windward of the latter; this was the *outer line*, and here were placed all supplies; a guard was placed to keep off cattle, dogs, and cats. This brief abstract is only a part of the regulations adopted.

The selectmen give public notice October 9, 1793, of the existence of small-pox in town; that only seven persons have been seized with that disorder, all of whom were immediately removed out of town to a place of safety, being distant from any public road. How it was introduced not definitely known, but supposed from a vessel in the harbor.

The selectmen remind the inhabitants that the law imposes a penalty of forty pounds for *privately inoculating* and for neglecting to give immediate information to them when any person in their respective dwelling breaks out with the small-pox thirty pounds; either of which penalties being incurred will immediately be sued for without discrimination.

In addition to the hospital, two smoke or cleansing houses were erected.

November 13, 1793: For a week but one case of small-pox in town. "The woman was immediately removed and inoculated." This makes the whole number 21, of which it is very remarkable there was but one male.

In 1773 Newbury voted to confine inoculation entirely to the "pest-house," and chose a committee to prevent it from being performed in private dwellings.

1794: In Newburyport inoculation with small-pox had nearly, or quite, ceased, as an advertisement offers the hospital, rent free (May 13), to a small family who will take it. A few years later, 1801, vaccination for kine-pox appears to have been introduced, as the paper notices a case in the neighborhood which had been "exposed at Norfolk to the small-pox, and has been inoculated for it there, without producing the least trait of the disease." The newspaper also refers to Dr. Jenner's method of inoculating. Before 1807 the town hospital for inoculation had been entirely abandoned, and in 1808 a town physician advertises to "inoculate for the kine-pock at his house in Washington street."

In 1810, at the town meeting in April, a large committee was chosen "to superintend the inoculation of the inhabitants for the kine-pock;" and the committee immediately gave public notice "that they shall visit every house in town in the course of this week to ascertain the number of persons who have not already been inoculated or who have not already had the small-pox."

The few cases of this disease which subsequently appeared in town, from time to time, ceased to create much, if any, alarm, until 1840, when the death of one of the pilots of this port occurred from the small-pox, in April, he having slept on board of a vessel from Boston, and, as it was reported, had never been vaccinated. One other case of small-pox may be mentioned as having been brought into town the last summer (1881) in a vessel, that of a seaman, who recovered after being sent to a vacant house, by the city authorities, remote from other dwelling-places, on the outskirts of the city.

YELLOW FEVER IN NEWBURYPORT.

September 21, 1793: Governor Hancock issued a proclamation as follows:

"Whereas a dangerous and infectious disease is prevalent at this time in the city of Philadelphia, and it being highly expedient that effectual measures should be adopted to prevent its introduction within this commonwealth [Massachusetts].

"I do, therefore, in pursuance of a resolution passed by the two branches of the legislature this day, require all sheriffs and their deputies, the selectmen and constables of the several towns in this commonwealth, to take effectual measures for examining all persons, with their baggage and other effects, by land or water, coming from Philadelphia or any other infected place, and where there is reason to apprehend that the infection may be communicated, that they take such measures as the law in such cases made and provided directs for detaining and cleansing the persons and baggage from which danger may be apprehended, so as to effectually prevent the introduction and spreading of said infectious disease among the good people of this commonwealth."

(Signed, &c.)

Newburyport, in response to this proclamation, and in view of the great mortality from yellow fever raging at Philadelphia, the accounts published from there stating that one hundred persons were buried in one day at this time, and in the general alarm which prevailed, issued this "notification:"

"Whereas a dangerous and infectious disease is now prevailing, not only in Philadelphia, but also in the leeward and windward West India islands, this is to forbid all pilots, and others, on penalty of the law, from bringing any vessel from Philadelphia higher up the Merrimac River than the Black Rocks, or any vessel from a foreign port to any wharf in this town, but let them remain in the stream until examined by the health officer and certificate from him be obtained certifying her being, in his opinion, free from infection.

"By order of the selectmen.

"Published September 23, 1793."

The quarantine ground, so called, was about a mile and a half below the town.

The selectmen also remind the inhabitants, at this date, to give special attention to cleanliness, and recommend the most scrupulous examination of the streets, that no dead carcases or other offensive things are suffered to remain, and to the "necessity of causing all drains and offensive, stagnant waters in yards or near houses to be cleansed." &c.

A Philadelphia account in the Newburyport Herald, under date of October 16, 1793, gives the number of burials in that city at 4,064, from August 19 to October 11.

PHILADELPHIA, *October* 29: "Fever abated; people returning to the city. Health restored."

The selectmen of Newburyport, in the summers of 1794 and 1795, urge a strenuous enforcement of the quarantine regulations, as the yellow fever was prevailing in several of the cities in the United States, especially in New Haven, in 1794, to such an extent as to break up the college; and, as early as May 14, 1795, the pilots and masters were ordered by the selectmen of Newburyport "not to bring any vessel above Black Rocks then having, or during the voyage having had, any person on board infected with small-pox or any pestilential disease, or coming from any port where such diseases prevail, until liberty is obtained from the selectmen. On hoisting a color on the shrouds [of the vessel] a proper person will attend on board to see the vessel well cleansed and to make report of her situation."

The following year, 1796, the yellow fever made its appearance in Newburyport, causing great alarm, but it was not until about the middle of August that it was publicly noticed, although it commenced in June, and from the middle of that month until the 5th of October fifty-five fatal cases were reported. Tradition says that some of the prominent citizens of the town at this time took steps to secure the services of an experienced French physician, Dr. Francis Vergnies, whom the local paper mentioned as having arrived in Newburyport in the summer of this year from the island of Guadaloupe. That this gentleman rendered important service was evident, as the town at a public meeting of the citizens, in April of the following year, 1797, unanimously voted "that the thanks of the town be given to Dr. Vergnies, for his prompt assistance and advice the last summer [1796], when the town was visited with a malignant disorder."

Dr. Vergnies continued his residence in Newburyport in the general practice of his medical profession until his death, in 1830.

These cases of yellow fever are the first which I find publicly acknowledged as such, and reported in the history of the town. One of the historians of Newburyport remarks that "this malignant fever, a disease then practically unknown to the members of the medical faculty here, but which was thought to be similar, if not identical with the yellow fever of the South, first appeared in a house on Water street, &c., in the immediate neighborhood of one of the wharves in the harbor, and its ravages were confined to a narrow locality and short distance in this street, which was closed, or 'chained up,' to prevent passage. It was conjectured by some that the disease originated on the spot, but the most reasonable conclusion was that it was brought in a vessel from one of the West India islands; and this opinion was generally entertained. That the fever was caused by decayed fish in the dock was believed in by many there is no doubt, as I find that the town, in a special meeting called July 21 of this year, chose an 'inspector of police,' to remove all nuisances, and 'to prohibit fish being thrown into the river,' &c. Among the victims to this disorder, which caused great excitement in the town, and widespread alarm, were several prominent citizens of the town, including an eminent resident physician, Dr. J. Benard Swett. The fever disappeared with the frost."

In 1797, July 27, the town voted to choose a health officer to carry into effect a law of the commonwealth passed the month previous, "to prevent the spreading of contagious sickness." Public attention in this town was again called in the following summer to the danger from yellow fever by its prevalence in Philadelphia, New York, Albany, Newport, Boston, and several other places at the North, up to the middle of September. In the summer of 1799 there was a return of a similar disease at Newburyport, which the petitioners for a special town meeting called "an alarming mortal sickness;" and a health committee was chosen to adopt measures to prevent the fever from spreading, and to secure a more rigid quarantine.

The reappearance of the yellow fever this summer in Philadelphia caused general alarm, and in this town the fear was not groundless, as the health committee reported nine persons "as having died of malignant fever" up to July 23. The health officer, meantime, had ordered the free use of unslacked lime in the streets of the town, and wherever there was any accumulation of filth, "and particularly in vaults." Up to the 6th of August there appear to have been fifteen fatal cases, and the health committee report on that day "that the

fever had not been communicated except in the vicinity of the lower Long Wharf," and they recommend that those persons who have left that neighborhood remain away until notified by the committee. A week later several of the traders advertise that they have returned to the town with their goods to their places of business in Water street. The fever in this instance was supposed to have been brought into town by a vessel which arrived from St. Thomas on the 29th June, and is reported in the newspaper as having discharged her cargo at the wharf mentioned above, and that nearly all those who had died had labored on board of this vessel.

An additional act of the legislature, passed in February, 1800, "to prevent the spreading of contagious sickness," empowered the selectmen of towns to enforce the most stringent quarantine regulations; and as early as the middle of April of this year the board in Newburyport issued public notice "that the safety of the inhabitants of the town requires that a quarantine should be ordered on all vessels which shall or may arrive in this harbor from the island of Jamaica, or from any port or ports in the West Indies, where the plague, pestilential or malignant fever, or other contagious sickness prevails; and also on all vessels on board of which any person or persons are visited or have lately before been visited with the plague, small-pox, pestilential or malignant fever, or other contagious sickness. Therefore, being empowered and required by a law of the commonwealth, the selectmen do order each and every vessel coming within the purview of this order to perform quarantine below the salt works, so called, until the further orders from this board," "and the captains or masters, officers, crews, and passengers of such vessels to be purified, together with the cargo, clothes, beds, and bedding, and every matter and thing on board, under the directions of the health officer of the port;" and the vessel is to display "the red flag at the head of the mainmast during the whole performance of quarantine;" no person is to be allowed to go on board, and no one is to go out of the vessel, neither is "any letter, packet or paper, or other thing of any kind or nature, whatever, to be taken out" except by permission of the health officer or other person or persons employed by the board of selectmen; any violation of these regulations will subject the offenders to the pains and penalties of the law. Two months later these orders were repeated with specific mention of "the continent of America, and of Africa south of the tropic, the Cape de Verd islands, or any port within the straights of Gibralter, and from any port south of Philadelphia."

Similar regulations were annually adopted and promulgated by the selectmen, sometimes as early, and at other times at a later date, as public safety seemed to require, and up to the year 1807, after which, with the exception of 1810, when there was an unfounded brief alarm, apprehension of any return of yellow fever seems to have subsided in town; but when found necessary, quarantine regulations have been enforced. The last instance of what was supposed yellow fever in town proved fatal to an experienced and prominent physician, Dr. Bradstreet, who was at the time the health officer of the port, and probably took the disease from his visits to a vessel at quarantine from the South in the summer of 1829, and it was supposed also to have been communicated to a member of his family, his daughter, whose death occurred very soon after his own.

ABSTRACT FROM REPORTS OF STATE AND LOCAL BOARDS OF HEALTH.

California, September, 1881.

Dr. F. W. Hatch, secretary of the State board of health, reports a total of 423 deaths, from all causes, in twenty cities and towns in the State, having an aggregate population of 335,249. The average annual death-rate per 1,000 during September was 15.13, as against 15.84 in the preceding month.

The distribution of the principal causes of death is shown in the following table:

	Population.	Total deaths.	Annual death-rate per 1,000.	Consumption.	Acute lung diseases.	Diphtheria.	Croup.	Scarlatina.	Diarrhœa and dysentery.	Cholera infantum.	Measles.	Typhoid fever.	Malarial fevers.	Whooping-cough.	Small-pox.
Coast cities	249,543	323	15.2	45	26	4	0	0	6	2	0	1	1	1	4
Coast valleys	21,185	21	15.9	7	4	0	1	0	2	0	0	1	0	0	0
Interior valleys	49,421	69	16.7	19	6	2	0	0	1	1	0	2	4	0	0
Mountains	10,100	10	11.9	0	1	0	0	0	0	0	0	0	0	0	0
Totals	335,249	423	15.3	71	37	6	1	0	9	3	0	4	5	1	4

In comparing the report for September with that for August, a marked increase is found in the number of deaths from consumption and acute lung diseases. During the month of August, 12.79 per cent. of the total mortality was ascribed to consumption. The percentage from this cause to total deaths rose to 19.14 during September. Of deaths from acute lung diseases the percentage rose from 6.39 in August to 8.74 in September. The increase in deaths from these diseases was confined to the interior and coast valleys of the State, and is to be expected as the rainy season approaches with its humid atmosphere and chilly nights and mornings. The deaths from diphtheria increased from 2 in August to 6 in September, and from cerebro-spinal fever the increase was from 2 to 9. Diphtheria is reported as slightly prevalent in San Bernardino, Sacramento, and Linden.

Connecticut, September, 1881.

Dr. C. W. Chamberlain transmits the following report of the mortality in six principal towns in Connecticut during the month of September:

	Hartford.	New Haven.	New Britain.	Meriden.	Waterbury.	Bridgeport.	Norwich.	New London.	Killingly.
Zymotics	20	28	7	5	10	9	5	.....	8
Infantile	30	29	5	10	9	7	8	6	8
Nervous system	11	11	.....	6	4	.....	.....	.....	2
Heart disease	5	6	.....	.....	.....	.....	.....	.....	.....
Diphtheria and croup	5	4	2	.....	2	.....	.....	.....	2
Scarlet fever	.....	.....	.....	.....	1	.....	1	.....	.....
Whooping-cough	3	.....	.....	.....	.....	.....	.....	.....	.....
Typhoid fever	.....	1	2	.....	.....	1	1	1	1
Typhoid malarial fever	1	5	.....	.....	.....	.....	.....	.....	.....
Malarial fever	2	7	1	1	.....	1	.....	.....	.....
Infantile diarrhœa	8	9	2	2	4	3	3	.....	5
Diarrhœa and dysentery	.....	1	.....	.....	2	1	.....	.....	.....
Consumption	14	15	4	3	5	3	4	2	.....
Acute lung diseases	8	3	.....	.....	2	2	.....	.....	.....

Old age	2	.....	.....	1	.....	.....	.....	.....	.....
Infantile debility	6	.....	.....	3	.....	.....	.....	.....	.....
Accident and violence	1	7	.....	.....	.....	1	1	1	.....
In public institutions	10	9	.....	.....	.....	.....	.....	.....	.....
Total number deaths	79	101	19	22	31	28	27	22	11
Monthly rate	18.5	17	15	13	14	10	13	20	19

Dr. Chamberlain states that there was a marked decline in the number of deaths reported during September, as compared with that of the preceding month, though it is still in excess of the number reported in the corresponding period of the past two years.

Malarial diseases have been unusually prevalent, and their presence is attributed in a great measure to the protracted drought of the past summer. The mortality from this class of diseases has been greatest in New Haven, where 12 deaths are reported. An increase in the number of cases of malarial disease is reported in Hartford, and in the town of Thompsonville nearly one hundred cases occurred almost simultaneously. In Fairfield and Milford, where systematic work has been done in the matter of drainage, there were but few cases of malarial disease.

Diphtheria has been steadily increasing in Hartford during the past four months. It is still confined to a limited portion of the city, and while the disease is not generally prevalent, still in some localities the cases have been quite numerous. The disease is believed to have had its origin in an old wool and hide storehouse which has been converted into a dwelling house, and which stands in an unsanitary location. Sporadic cases are also reported from other parts of the State; in several instances from three to five cases in a single family without the occurrence of any cases in adjacent households. It was observed in some instances that the disease increased in malignancy as it was transmitted from one to another in the same family. Cerebro-spinal meningitis was quite prevalent in Bridgeport and Derby during the month. Scarlet fever is also reported from a number of places, though it has nowhere become epidemic.

Typhoid fever is reported of unusual frequency. A large numb of cases occurred at Willington, and its existence is noted quite generally in that region.

Chicago, Ill., October, 1881.

Dr. M. K. Gleason, registrar of vital statistics, reports a total of 1,085 deaths from all causes during the month, giving an annual death-rate of 24.11 per 1,000 of the population, estimated July 1, 1881, at 540,000. As compared with the preceding month there was a decline of 118 in the total mortality. Compared with the corresponding period of last year, there was an increase of 217 in the number of deaths registered. Among the principal causes of death were the following: Small-pox, 172; measles, 3; scarlatina, 8; diphtheria, 71; croup, 43; whooping-cough, 2; typhoid fever, 123; typhus fever, 2; cerebro-spinal fever, 6; malarial fever, 13; diarrhœal diseases, 47; and from other zymotic diseases, 39. From phthisis pulmonalis there were 81 deaths, and from acute lung diseases 70. Of the total number of deaths, 194, or 45.5 per cent., were of children under 5 years of age.

District of Columbia, September, 1881.

The report of Dr. Smith Townshend, health officer, gives a total of 403 deaths from all causes during the month of September. Of this

[Continued from page 181.]

number there were of whites 201, and of the colored race 202. The white population being estimated at 120,000 and the colored at 60,000, the annual death-rate per 1,000 was 20.05 and 33.40, respectively, and for the entire population 24.65. The number of deaths registered in September of the present year showed a decrease of 31 as compared with the preceding month, an increase of 38 as compared with the corresponding period of last year, and 66 in excess of the average for same month in the past eight years. The rate of mortality in September has been steadily increasing during the past four years, and that for the present month has been exceeded but twice in the last eight years. Among the principal causes of death were the following: Diphtheria, 15, white 8, colored 7; typhoid fever, 17, white 11, colored 6; malarial fevers, 35, white 19, colored 16; diarrhœal diseases, 72, white 40, colored 32; tubercular diseases 91, white 33, colored 58; diseases of the nervous system, 52, white 25, colored 27; and diseases of the respiratory organs, 14, white 6, colored 8. Of the total number of deaths, 187, or 46.4 per cent., were of children under 5 years of age.

DUNKIRK, N. Y., OCTOBER, 1881.

Dr. Charles Curtis reports a total of 19 deaths during the month, giving an annual death-rate of 32.6 per 1,000 of the population. Among the deaths reported there were 3 from diarrhœal diseases, 2 from consumption, and one from congestion of the lungs. The number of deaths of children under 5 years of age was 11, or 55.3 per cent. of the total mortality.

MEMPHIS, TENN., OCTOBER, 1881.

The report of the board of health for the month of October, received from Dr. C. Cannon, secretary, gives a total of 109 deaths from all causes; whites 46, colored 63. In October of last year the number was, whites 48, colored 62. The causes of death are classified as follows: From zymotic diseases, 42, white 20, colored 22; from constitutional diseases, 12, white 5, colored 7; from local diseases, 44, white 27, colored 17; and from developmental diseases, 11, white 10, colored 34. The annual death-rate per 1,000 of the population during October of the present year was as follows: Whites, 29.64; colored, 51.16, and for the entire population 38.93. The total number of deaths of children under 5 years of age was 56, white 23, colored 33, being equal to 51.4 per cent. of the total number of deaths registered.

MINNEAPOLIS, MINN., OCTOBER, 1881.

Dr. A. H. Salisbury, health officer, furnishes the mortality report for October, showing a total of 135 deaths from all causes. The number of deaths registered during the month was 6 in excess of the number registered in the preceding month, and 66 in excess of that of the corresponding period in 1880. This great increase was largely due to the prevalence of typhoid fever, which caused 60 deaths during the month. There were 13 deaths from diphtheria, 13 from consumption, 4 from pneumonia, and 2 from bronchitis. The annual death-rate per 1,000 of population was 32.40. Of the total number of deaths, 40, or 29.6 per cent., were of children under 5 years of age.

NASHVILLE, TENN., OCTOBER, 1881.

The mortality report for October, furnished by Dr. Richard Cheatham, health officer, &c., shows a total of 107 deaths from all causes, of which number 60 were white and 47 colored. The deaths ascribed to zymotic diseases numbered 34; to constitutional diseases, 18; to local diseases, 33; to developmental diseases, 8, and to violence 3. Eleven deaths are reported in which the cause is stated as unknown. The annual death-rate per 1,000 was, for the white population 25.80, for the colored 36.66, and for the entire population 29.96. The deaths under 5 years were 39, of which number 20 were white and 19 colored.

NORFOLK, VA., OCTOBER, 1881.

Dr. James D. Galt, health officer, reports a total of 63 deaths from all causes during the month of October, whites 23, colored 40. The annual death-rate per 1,000 of the white population is 23.2, of the colored 47.6, and of the entire population 34.4. Of the total number of deaths, 29 (white 9, colored 20), or 46 per cent., were of children under 5 years of age.

SAINT PAUL, MINN., OCTOBER, 1881.

The report of Dr. C. A. Wheaton, health officer, for the month of October, shows a total of 105 deaths from all causes. Of this number 22 died of diphtheria, 29 of typhoid fever, 4 of consumption, and 3 of acute lung diseases. The annual death-rate per 1,000 of population was 30.4. Of the total number of deaths, 37, or 35.2 per cent., were of children under 5 years of age.

NOTICE.—All official communications to the National Board of Health should be addressed to the *Secretary* of the Board, Dr. T. J. Turner, U. S. N. Correspondents and others whose writing may be for publication are reminded that much inconvenience is caused by writing on both sides of the paper.

STEPHEN SMITH, M. D., &c., 31 West Forty-second st., New York.
THOS. J. TURNER, M. D., U. S. N., 1227 M st., Washington, D. C.
TULLIO S. VERDI, M. D., &c., 815 14th st., N. W., Washington, D. C.

NOTICE.—In filling the reports on the postal cards for cities and hospitals, the figures are frequently so placed between the lines as to leave the disease intended entirely uncertain, except in cases where the judgment of the compiler may enable him to determine which is meant. This may be avoided by a stroke of the pen after the disease to be recorded. The *total* numbers should be placed in their proper columns, and no figures placed immediately after the word *total* will be noted in the tables. Those who report *still-births* will please note them separately, as they are not included in the tables of mortality in the BULLETIN.

NOTICE.—Extra copies of the BULLETIN will be furnished at this office at the rate of *five cents* per copy. Notice of at least one week should be given when a large number is required.

National Board of Health

BULLETIN.

VOL. 3.] WASHINGTON, D. C., SATURDAY, DECEMBER 10, 1881. [No. 24.

SMALL-POX REGULATIONS IN ILLINOIS.

The following regulations and circular letters have been issued by the State board of health of Illinois:

HOW TO PREVENT THE SPREAD OF SMALL-POX.

OFFICE OF THE STATE BOARD OF HEALTH,
Springfield, Ill., June, 1881.

Although there is no contagion more powerful or certain, experience has taught that the spread of small-pox may be absolutely prevented by a strict observance of the following

RULES.

1. On the first report of the existence of a case in a region, systematic vaccination or revaccination of every member of the exposed communities in such region should be at once resorted to.

2. Whenever it is known that any person is sick with small-pox or varioloid, isolation of the individual should be promptly and rigidly enforced. Every one in the house should be vaccinated or revaccinated, no matter how recently this may have been done, nor how mild the disease may appear. In towns or cities where there are small-pox hospitals, it is better that the patient should be removed to such at once. Where there is no such provision, the infected house should be strictly quarantined, and, if necessary, the police authority must be invoked to secure proper restrictions. An improvised hospital will be an absolute necessity if the case occurs in a crowded family or tenement-house, where proper isolation cannot be secured. In such case, a barn, outhouse or other building may be made sufficiently comfortable for the patient, at small expense; or, if the weather be mild enough, a tent may be used. A flag or placard, bearing the words "SMALL-POX," should be prominently displayed upon the house, and not removed until permission is given by the health authorities. *Isolation is a matter of the utmost importance.*

3. The room selected for the sick should be large, easily ventilated, and as far from the living and sleeping rooms of other members of the family as is practicable to have it. All ornaments, carpets, drapery, and articles not absolutely needed in the room, should be removed. A free circulation of air from without should be admitted, both by night and day—there is no better disinfectant than pure air. Care should, of course, be taken to keep the patient out of draughts.

4. All discharges from the nose and mouth of the patient should be received on rags and immediately burned, and the same precaution should be taken with the crusts as they fall off. Night-vessels should be kept supplied with a pint or two of a solution of carbolic acid—one gill of crude carbolic acid to half a gallon of water; or of chloride of zinc—an ounce and a half of the chloride to half a gallon of water. The discharges from the kidneys and bowels, received in these vessels, should be buried at least one hundred feet from any well or spring. All spoons, dishes, &c., used or taken from the sick-room, should be put in boiling water at once. Cleanliness in everything must be scrupulously enforced.

5. Not more than two persons—one of them a skillful, professional nurse, if possible—should be employed in the sick-room, and their intercourse with other members of the family and with the public must be as much restricted as possible. In the event that it becomes necessary for an attendant to go out of the house, a complete change of clothing should be made, using such as has not been exposed to infection; the hands, face, and hair should be washed in water to each half gallon of which has been added a tablespoonful of spirits of thymol,* or two tablespoonfuls of carbolic acid, or half a gill of a ten per cent. solution of permanganate of potassium. Following this, free exposure to the open air should be secured before approaching any one.

6. Physicians and other necessary visitors, before entering the sick-room, should put on an outer garment, closely buttoned up, and a handkerchief or wrap about the throat and neck. Such outer garment may be a linen duster or rubber overcoat; and this, together with the neck-wrap, should be taken off in the open air immediately after leaving the sick-room, and either be dipped in the disinfecting fluid hereafter described, or hung up out of doors until the next visit. Safety consists in exposing to the open air every article of clothing that has been in any way subject to the contagion. Whenever practicable the precautions above prescribed (*Rule* 5) for an attendant leaving the sick-room should be observed by the physician or visitor. Doctors and clergymen may convey contagion as readily as the laity under similar conditions; they should, therefore, take the same precautions.

7. No inmate of the house, during the continuance of the disease, should venture into any public conveyance, or assemblage, or crowded building, such as a church or school; nor, after its termination, until permission is given by the attending physician. Letters should not be sent from the patient, and all mail matter from the house should first be subjected to a dry heat of 250-260 deg. F. Domestic animals, dogs, cats, &c., should not be allowed to enter the room of the patient, or, better still, should be excluded from the house.

8. After recovery has taken place the patient should be bathed daily, for three or four days, in a weak disinfectant—the thymol water above described, or a solution of chloride of zinc (two drachms of the salt to half a gallon of water). The head should be thoroughly shampooed during each bath, and the convalescent be then clothed in fresh clean garments that have been in no way exposed to the infected air. Some time must elapse—ten to fourteen days according to the severity of the case—before the danger of communicating the disease is past, and patients should be kept in the house at least two weeks after the crusts have all disappeared.

9. In the event of death, the clothing in which the body is attired should be sprinkled with strong carbolic acid, and the body wrapped in a disinfectant cerecloth* and placed in an air-tight coffin, *which should remain in the sick-room until removed for burial.* No public funeral should be allowed either at the house or church, and no more persons should be permitted to go to the cemetery than are necessary to inter the corpse.

10. After recovery or death all articles worn by, or that have come in contact with, the patient, together with the room and all its contents, should be thoroughly disinfected by the burning of sulphur or the pouring of crude carbolic acid on chloride of lime. To do this, have all windows, fire-places, flues, key-holes, doors, and other openings securely closed by strips or sheets of paper pasted over them. Then place on the hearth or stove, or on bricks set in a wash-tub containing an inch or so of water, an iron vessel of live coals, upon which throw three or four pounds of sulphur; or place a number of plates of chloride of lime (say six feet apart) in different parts of the room, and pour on them crude carbolic acid. All articles in the room, and others of every description that have been exposed to infection, and are too valuable to be burned, yet cannot be washed nor subjected to dry heat, must be spread out on chairs or racks—mattresses or spring beds set up so as to have both surfaces exposed; window-shades and curtains laid out at full length, and every effort made to secure thorough exposure to the sulphur or chlorine fumes. The room should then be kept tightly closed for twenty-four hours. After this fumigation—which it will do no harm to repeat—the floor and woodwork should be washed with hot water, the walls and ceiling whitewashed, or, if papered, the paper should be removed. The articles which have been subjected to fumigation should be exposed for several days to sunshine and fresh air. If the carpet has unavoidably been allowed to remain on the floor during the illness, it should not be removed until after the fumigation, but must then be taken up, beaten and shaken in the open air, and allowed to remain out of doors for a week or more. If not too valuable, it should be destroyed; but, whenever practicable, it should be removed from the room at the beginning of the illness. After the above treatment has been thoroughly enforced, the doors and windows of the room should be kept open as much as possible for a week or two. Where houses are to some extent isolated, judgment can be used in exposing articles out of doors. The entire contents of the house should be subjected to the greatest care, and when there is any doubt as to the safety of an article *it should be destroyed.* The privy should be thoroughly disinfected, during the entire illness, with copperas solution—prepared

* *Spirits of thymol,* for this purpose, may be made by adding one ounce of thymol to three ounces of alcohol, 85 per cent. This disinfectant is free from the disagreeable odor of carbolic acid, and is quite as efficient.

* This may be a sheet thoroughly soaked in the disinfecting fluid described in Rule II—only of double strength; that is, *eight* ounces sulphate of zinc and *four* ounces common salt to *one* gallon of water.

by dissolving about sixty pounds of copperas (suspended in a basket) in a barrel of water; three to five gallons of this solution, to which may be added a pint of crude carbolic acid, should be thrown into the vault every three or four days. Water-closets should be disinfected by pouring a quart or so of the solution into the receiver after each use.

11. Such articles of clothing, bedding, &c., as can be washed, should first be treated by dipping in the following disinfecting fluid: Sulphate of zinc, 24 ounces; carbolic acid, 4 ounces; or common salt, 12 ounces; water, 6 gallons.

A pail or tub of this fluid should be kept in the sick-room, and into this all clothing, blankets, sheets, towels, &c., used about the patient or in the room, should be dropped immediately after use, and before being removed from the room. They should then be immediately and thoroughly boiled. The ticking of beds and pillows used by the patient should be treated in the same manner; and the contents, if hair or feathers, should be thoroughly baked in an oven. If this cannot be done, they should be destroyed by fire, as should, in any event, all straw, husk, moss, or "excelsior" filling. The clothing of nurses should be thoroughly fumigated and cleansed before it is taken from the house, and, better still, burned, if circumstances will admit.

12. If, from neglect or delay in enforcing precautionary measures, the disease shows a tendency to become epidemic, the public and private schools should be closed, church services suspended, and public assemblages of people, as at shows, circuses, theaters, fairs, or other gatherings, should be prohibited.

Finally, the above precautions, if faithfully carried out, may be confidently relied upon to prevent the spread of the disease, and the intelligent confidence thus secured will prevent panic and the inhuman treatment of the afflicted, which so often arises from ignorance and unreasoning fear.

A copy of this circular should be left in every house where there is a case of small-pox; and the local health authorities are charged with a strict enforcement of the rules. In view of the prevalence of the disease at the present time, and the recognized difficulty of a positive diagnosis in every case, any reasonable doubt should be resolved in favor of wise precaution. It is by no means necessary that a case should present all the typical symptoms in order to initiate a malignant epidemic—even a mild case, with little or no eruption, may do this. Local health authorities cannot too strongly insist upon this point.

By order of the board.

JOHN H. RAUCH, *M. D.*,
Secretary.

ILLINOIS STATE BOARD OF HEALTH,
Springfield, November 12, 1881.

(*Addressed to Presidents and General Managers of Railroads in Illinois.*)

DEAR SIR: Attention having been attracted to the fact that, in several instances during the past year, the only cases of small-pox in certain localities have been among railroad employés, the State board of health earnestly urge upon you the necessity for prompt vaccination, or revaccination, as the case may be, of the entire personnel of your road. Train officers and crews are especially liable to contract the disease from their necessary exposure to contact with passengers; and during the present heavy immigration movement the danger of infection is greatly increased.

The cordial co-operation in all measures looking to the protection of the public health and consequent avoidance of interruption to travel and traffic, which the board has, whenever occasion required, found you ready to accord, prompts the belief that you will adopt this recommendation forthwith and push its efficient enforcement.

Copies of the accompanying circular, "How to prevent the spread of small-pox," will be furnished you for distribution if desired.

By order of the board. JOHN H. RAUCH, M. D.,
Secretary.

ILLINOIS STATE BOARD OF HEALTH,
Springfield, November 14, 1881.

President or General Manager ———— *Railroad:*

DEAR SIR: At the last quarterly meeting of the Illinois State board of health the inclosed preamble and resolution were unanimously adopted. Since that time the increasing spread of small-pox has emphasized the necessity for the action therein indicated.

It is admitted that railroad authorities do, in their own interest, exert such effort as to them may seem necessary and practicable to prevent avoidable sickness and loss of life. The question remains, Can such effort be made more efficient and less onerous by concert of action—by a well-considered code of sanitary rules and regulations—by the assistance of State and local health authorities?

In the present emergency the answer must undoubtedly be in the affirmative. There is abundant proof of the agency of railway communication in spreading small-pox, first, by the transportation of infected passengers, mainly immigrant, and their baggage, and, secondly, through unprotected railway employés. With the first, of course, the companies cannot deal unassisted, but the second evil is largely, if not entirely, under their control.

As an illustration of other evils which it is sought to remedy, may be cited the long through runs of passenger coaches without change. From a sanitary standpoint, no car—whether immigrant, ordinary passenger, parlor, or sleeping coach—should be occupied continuously more than a given number of hours, depending upon the character of the car, its occupants, and the season of the year. At the end of, say, twelve hours in winter a crowded immigrant car is often simply a hot-bed for the rapid propagation and diffusion of any contagious or infectious disease which may exist among its inmates. To a certain extent, differing mainly in degree, this is also true of the best-appointed first-class passenger car, parlor or sleeping car.

While this is true, the difficulty of inducing the traveling public to accept the change indicated is fully recognized; and yet sanitary authorities are agreed as to its importance on the score of health. Whether short runs are more or less desirable, on economic grounds, is a question for the railway expert to answer.

It is believed that a study of the information you can furnish on these and kindred points may be productive of benefit both to the railways and to the public.

Very respectfully,

JOHN H. RAUCH, M. D.,
Secretary.

Extract from the minutes of the regular quarterly meeting of the Illinois State board of health, September 29–30, 1881:

Drs. Clark, McLean, and Bateman, the committee to which had been referred a paper by the secretary on the subject of railroad sanitation, offered the following preamble and resolution, which were adopted:

"Whereas it is believed that the health interests of the public may be promoted by the assistance of this board in certain measures connected with the sanitary administration of the railway service in Illinois, to which end an interchange of ideas and information is necessary: Therefore be it

"*Resolved*, That the secretary be instructed to communicate with the managing authorities of the various railroad lines in this State for the purpose of ascertaining the details of existing methods and agencies employed by such lines, (1), in the conservation of the health and lives of passengers of different classes; (2), in the prevention of the spread of contagious or infectious diseases; (3), in the hygienic and sanitary supervision of employés; and (4), in the care and policing of depots, offices, buildings, and grounds, the information thus acquired to be made the basis of such action or recommendation by this board as the facts may demonstrate to be necessary or advisable in the direction of co-operation with railroad authorities and the sanitary education of the traveling public."

DEFECTIVE CONSTRUCTION OF SUMMER HOTELS.

ILLINOIS STATE BOARD OF HEALTH,
Springfield, November 11, 1881.

To the Secretary State Board of Health:

MY DEAR DOCTOR: At the last quarterly meeting of this board the secretary submitted a paper on the "Dangers of Summer Resorts," prompted, in part, by his personal experience in August last at Beach Haven, N. J., when the Parry House was destroyed by fire. The rapidity of the combustion—the entire building being completely destroyed within an hour—the limited means of egress, and the time of occurrence of the fire, 3 a. m., rendered the escape of the inmates without loss of life little less than miraculous. The Parry House was in no essential respect different from the average hotel as found at many popular summer resorts, the most cursory examination of which would reveal the same insufficient provision for exit and a like flimsy and combustible character of structure.

After discussion by the board, it was—

Ordered, That the secretary be instructed to address a communication to the New Jersey State board of health, and to the boards of health of other States in which there are summer resorts, inviting attention to the subject, and respectfully recommending that, in case there are no adequate laws governing the construction of such buildings with reference to danger from fire, inspections should be made of these resorts, covering this point as well as the general sanitary conditions which obtain in and about such places; this recommendation being based upon the belief that the publication of reports of such inspections would go far toward securing a correction of the evils disclosed.

This board will be glad to co-operate with you in any manner indicated, to the extent of its ability, either in this or any other direction, in the common labor of promoting the public safety.

Very respectfully, JOHN H. RAUCH, M. D.,
Secretary.

REPORTS OF CORRESPONDENTS OF THE NATIONAL BOARD OF HEALTH.

BALTIMORE, MD.—Dr. A. R. Carter, secretary of the health department, writes, under date of November 26, that no new cases of small-pox have been reported since November 19, and that the disease is now believed to be under control.

BURLINGTON, VT.—Dr. George M. Ockford writes, under date of November 29, that the city has been free from epidemic during the past three months. The principal diseases have been of a catarrhal character or due to hepatic derangement. Diphtheria has occurred in some portions of the city during the past month, and one or two cases proved fatal.

MURFREESBORO', TENN.—Dr. J. B. Murfree, president of the board of health, reports, under date of November 19, that typhoid fever prevails to some extent in that place.

NEW ORLEANS, LA.—Dr. S. M. Bemiss writes, under date of November 29, that small-pox has made its appearance in that city. A man with the eruption upon his person as far advanced as the fifth day applied for admission to hospital. He stated that he had left Havana five days previously, though it was not learned by what route he had reached the city. A case is also reported in private practice.

PITTSBURGH, PA.—Dr. W. Snively, registrar, reports that 73 cases of small-pox and varioloid were reported during the week ending November 19, of which number 22 proved fatal. During the week ending November 26, 61 cases and 20 deaths were reported.

RICHMOND, IND.—Dr. J. R. Weist, president of the board of health, reports 2 cases of small-pox and 3 of varioloid during the week ending November 26. No deaths are reported.

ROCHESTER, N. Y.—Dr. Charles Buckley writes that small-pox made its appearance during the week ending November 19, 2 cases having been reported during that period.

SHELBYVILLE, TENN.—Dr. C. C. Fite writes, under date of November 16, that the health of that portion of the State has been uniformly good during this season. There have been some cases of so-called typho-malarial fever, with a few deaths. Considerable diversity of opinion exists among physicians as to the precise nature of the disease, and it is variously named typho-malarial, remittent, typhoid, continued fever, and congestive fever. The nervous system seems generally to have the force of the disease in the first stage, then the alimentary canal becomes irritated, the patient, in fatal cases, being unconscious or delirious during the last week of sickness. In the treatment of the disease, it has been observed that while the cinchonies modify to some extent they have no controlling influence.

SOUTH BEND, IND.—Dr. J. M. Partridge writes, under date of November 11, that small-pox appeared in that place October 16 in a family just arrived from Laporte in this State. Five cases occurred in the family, three of which were fatal. There are now four cases in as many different families. Sufficient time, however, has not yet elapsed to enable us to determine whether the disease is likely to prevail to any great extent.

ST. LOUIS, MO.—Dr. Robert Luedeking reports that during the week ending November 19, four cases of small-pox were sent from the city to the small-pox hospital, and that one death has been reported.

TOPEKA, KANS.—The report of interments in the Topeka cemetery gives a total of 31 during the month of October. Whites, 21; colored, 10. Among the causes of death reported were from consumption, white, 3; from diarrhœal diseases, white, 4; colored, 2; from fevers, white, 4; and from acute lung diseases, colored, 3. Of the total number of deaths, 8 or 25.8 per cent. were of children under 5 years of age. Of these, 4 were white and 4 colored.

YONKERS, N. Y.—Dr. V. Browne, health officer, reports, under date of November 19, that measles prevails as an epidemic. The epidemic of scarlet fever previously reported is now believed to be under control.

REPORT OF MORTALITY IN CITIES OF THE UNITED STATES FOR THE WEEK ENDING NOVEMBER 26, 1881, IN WHICH BURIAL PERMITS ARE NOT REQUIRED.

ABSTRACTS FROM CONSULAR REPORTS.

ASPINWALL, UNITED STATES OF COLOMBIA.—James Thorington, United States consul, reports, under date of November 12, that the city is in good sanitary condition and free from diseases of a contagious or infectious character.

BATAVIA, JAVA.—Oscar Hatfield, United States consul, reports through the Department of State, under date of October 3, that cholera has made its appearance at Batavia, several cases having occurred both among the natives, and soldiers and sailors in the city. The disease is also spreading in the other cities of the island, chiefly among the natives.

BORDEAUX, FRANCE.—George W. Roosevelt, United States consul, reports a total of 534 deaths from all causes during the month ending October 31, giving an annual death-rate of 29.7 per 1,000 of the population. Of the total number of deaths reported, there were 83 from small-pox, 11 from typhoid fever, and 101 from phthisis pulmonalis.

CALCUTTA, INDIA.—A. B. Cobb, United States vice-consul-general, reports 15 deaths from cholera, 1 from small-pox, and 8 from typhoid fever, during the week ending October 8. The total number of deaths from all causes during that period was 223, giving an annual death-rate of 27 per 1,000 of the population as compared with 25.9 in the preceding week.

CAPE HAYTIEN, HAYTI.—Stanislas Goutier, United States consul, reports, under date of November 13, that small-pox still prevails, the number of cases having increased largely during the past week. He also states that no sanitary measures are being taken to arrest the spread of the disease. The sanitary condition of the shipping, however, is good.

DEMERARA, BRITISH GUIANA.—United States Consul P. Figyelmesy reports that there were 24 deaths from yellow fever in Georgetown during the month of September.

HAVANA, CUBA.—Henry C. Hall, United States consul-general, reports 13 deaths from yellow fever during the week ending November 12. Total number of deaths reported from all causes, 118. Annual death-rate per 1,000 of population, 31.4.

KAGOSHIMA, JAPAN.—Hon. John A. Bingham, United States minister, reports to the Department of State, under date of September 8, that he has been notified by the Japanese Government that cholera has made its appearance in Kagoshima and is spreading rapidly among the people in that quarter. He states also that in compliance with the request of the Japanese authorities he has communicated the information to the United States consuls in Japan in order that American citizens may avoid the infected district.

LONDON, ENGLAND.—J. B. Nunn, vice-consul-general, transmits mortality reports for London and other large English towns for the

week ending November 5. The total number of deaths registered in London was 1,645, being an excess of 49 over the average numbers in the corresponding week of the last ten years. The annual death-rate, which had steadily increased in the five preceding weeks from 16.6 to 21.6, further rose last week to 22.4. Among the deaths reported were 12 from small-pox, 29 from measles, 95 from scarlet fever, 13 from diphtheria, 40 from whooping-cough, 5 from typhus fever, 53 from enteric fever, and 13 from diarrhœa. The number of deaths referred to these diseases was 38 in excess of the average number in the corresponding week of the last ten years. The number of deaths referred to diseases of the respiratory organs was 375, being one less than in the preceding week, and corresponded with the corrected weekly average. Of the number registered, 239 were attributed to bronchitis and 102 to pneumonia. The annual death-rate per 1,000 in twenty of the largest towns was 22.8, ranging from 17.2 at Wolverhampton to 28.4 at Liverpool.

MARACAIBO, VENEZUELA.—E. H. Plumacher, United States consul, transmits reports for the four weeks ending October 29. During the early portion of the month a mild form of yellow fever prevailed, but at the date of the last report the disease had disappeared. No report of the number of deaths from this or other causes is obtainable. The city is reported to be in bad sanitary condition.

MECCA, ARABIA.—E. A. Van Dyck, consular clerk at Cairo, Egypt, transmits the report of Dr. Wortabel, inspector of health, concerning cholera in Mecca, and on the line of travel followed by the pilgrims. There were 7 deaths from cholera in Mecca from September 11 to 13, inclusive. The total number of deaths from all causes during that period was 37. The caravan which left Mecca recently for Medina suffered from cholera. The disease also prevails at Raberg and Medina. Dr. Wortabel states, however, that, considering the nature of the victims, the pilgrimage, the fatigue of traveling, and overcrowding, he thinks that so far the epidemic may be regarded as a very light one.

QUEENSTOWN, IRELAND.—E. P. Brooks, United States consul, transmits reports, dated October 29 and November 12, regarding the prevalence of typhus fever at Queenstown; 72 deaths have been reported from this cause since January last, a marked increase in the mortality having occurred during October, 18 deaths having been reported to the 29th as against 10 for the preceding month. The disease is confined to a portion of the city in the vicinity of certain slaughter-houses, which are in the center of the town, and are surrounded by dwellings of the poorer classes and immigrant lodging-houses. The city authorities have heretofore neglected their duty in regard to the use of proper measures to prevent the spread of the disease, but the Lord Lieutenant of Ireland and the local government board at Dublin have now taken the matter in hand, and are now attempting to compel the Queenstown authorities to execute the laws properly. Earl Cowper has even gone so far as to intimate his intention of suspending all emigration unless the laws are duly enforced.

VICTORIA, BRITISH COLUMBIA.—Allen Francis, United States consul, reports, under date of November 12, that diphtheria, scarlet fever, and typhoid fever prevail. He also states that in view of the epidemic of small-pox in Washington Territory and Oregon the authorities are taking every precaution to prevent the introduction of the disease into Victoria.

REPORT OF MORTALITY FOR THE THIRTEEN WEEKS ENDING APRIL 2, 1881.

THOMAS J. TURNER, Medical Director U. S. Navy ..... *Secretary.*

MEMBERS.

PRESTON H. BAILHACHE, M. D., U. S. M. H. S., 509 Maple Ave., Le Droit Park, Washington, D. C.
SAMUEL M. BEMISS, M. D., &c., 358 St. Charles st., New Orleans, La.
JOHN S. BILLINGS, M. D., U. S. A., 84 Gay st., Georgetown, D. C.
JAMES L. CABELL, M. D., &c., University of Virginia, Va.
CHARLES F. FOLSOM, M. D., 113 Boylston st., Boston, Mass.
HOSMER A. JOHNSON, M. D., &c., 4 W. Sixteenth st., Chicago, Ill.
ROBERT W. MITCHELL, M. D., &c., 34 Madison st., Memphis, Tenn.
SAM'L F. PHILLIPS, Esq., Solicitor-Gen'l, 1119 K st., Washington, D. C.
STEPHEN SMITH, M. D., &c., 31 West Forty-second st., New York.
THOS. J. TURNER, M. D., U. S. N., 1227 M st., Washington, D. C.
TULLIO S. VERDI, M. D., &c., 815 14th st., N. W., Washington, D. C.

NOTICE.—In filling the reports on the postal cards for cities and hospitals, the figures are frequently so placed between the lines as to leave the disease intended entirely uncertain, except in cases where the judgment of the compiler may enable him to determine which is meant. This may be avoided by a stroke of the pen after the disease to be recorded. The *total* numbers should be placed in their proper columns, and no figures placed immediately after the word *total* will be noted in the tables. Those who report *still-births* will please note them separately, as they are not included in the tables of mortality in the BULLETIN.

NOTICE.—Extra copies of the BULLETIN will be furnished at this office at the rate of *five cents* per copy. Notice of at least one week should be given when a large number is required.

National Board of Health

BULLETIN.

VOL. 3.] WASHINGTON, D. C., SATURDAY, DECEMBER 17, 1881. [No. 25.

The following correspondence relative to the spread of small-pox, from Canada, transmitted by the honorable Secretary of State, is published for general information:

DEPARTMENT OF STATE,
Washington, May 26, 1881.

The Right Honorable Sir EDWARD THORNTON,
K. C. B., &c., &c., &c.:

SIR: I have the honor to bring to the attention of the Government of the Dominion of Canada, through you, a circumstance which is causing apprehension in the manufacturing districts of Massachusetts, whither Canadian subjects resort at this season to obtain employment in the factories for a limited period.

I am informed by the governor of the State of Massachusetts that small-pox appeared in the town of Adams, in that State, about seven weeks ago, in the person of a young French Canadian woman; since which time forty-nine persons have contracted the disease, of whom nine have died and others are not expected to recover. All those affected are reported to be, without exception, from the Dominion of Canada. Twenty-four of them have become a charge upon the charities of the State.

Within the past two years similar outbreaks of small-pox have occurred in Fall River, Salem, Holyoke, and Williamsburg, the sufferers being almost exclusively persons recently arrived from Canada.

The comparative immunity of residents of Massachusetts from the ravages of small-pox is largely due to the rigid enforcement of the vaccination laws of the State; for example, no child is admitted to the public schools there without complete evidence of previous vaccination. Sanitary laws of like tendency are believed to exist in Canada, but, from the recent occurrences, the conclusion is unavoidable that their enforcement is neglected, and that the subjects of the Dominion coming to this country to seek temporary employment are in a dangerously unprotected state.

The subject cannot but be one of grave interest to the authorities of the Dominion, inasmuch as the Canadian communities must be at least as much exposed to the calamitous outbreak of small-pox as are the American communities visited by Canadian immigrants, and it behooves them to see that the Dominion laws are adequate for domestic protection, and strictly enforced.

It may become necessary for this government to consider the propriety of adopting measures of self-defense, such as the compulsory examination of Canadian immigrants at the frontier, or some equally inconvenient and restrictive step. Meanwhile, it seems proper that I should make the subject known, through you, and ask earnest attention thereto on the part of the Canadian Government.

I have the honor to be, &c.,

JAMES G. BLAINE.

WASHINGTON, *October 29, 1881.*

Hon. JAMES G. BLAINE,
&c., &c., &c.:

SIR: Referring to your note of the 26th of May last, complaining of the prevalence of small-pox amongst Canadians emigrating to the United States, I have the honor to inform you that Sir Edward Thornton brought your note to the notice of his excellency the Governor-General of Canada, inviting at the same time the attention of the Dominion Government to the matter. His excellency has now forwarded to me a copy of a report from the honorable the Privy Council of Canada, replying to the observations made by you, from which it appears that although small-pox does sometimes make its appearance in Canada as in other countries, and notably in parts of Europe at the present moment, still every precautionary measure possible is taken against the spread of the disease. Efforts are made to cause vaccination to be generally practiced in Canada, and even among the Indian population in the territories vaccinators are occasionally sent by the federal and local governments to enforce the practice in as far as possible.

The committee point out that small-pox is not unfrequently brought to Canada from the United Kingdom, from parts of the continent of Europe, and from the United States, notwithstanding the vaccination laws and regulations of those countries, and complaints even this year have occurred in the province of Quebec of small-pox brought there from the United States.

The committee, after due consideration of a report furnished to them by the minister of agriculture, is of opinion that the Dominion Government will be unable to do anything in addition to the present precautionary measures taken to prevent the recurrence of cases of small-pox being sometimes conveyed to the United States and *vice versa*.

I have the honor to be,

With the highest consideration, sir, your obedient servant,

VICTOR DRUMMOND.

REPORTS OF CORRESPONDENTS OF THE NATIONAL BOARD OF HEALTH.

ATTLEBORO', MASS.—J. B. Savery, town clerk, reports numerous cases of scarlatina during the week ending December 3.

BALTIMORE, MD.—Dr. A. R. Carter, secretary of the health department, writes, under date of December 10, that there are but 10 cases of small-pox known to exist in the city at this time. The health department is active and using every means to prevent the spread of the disease. Cases which cannot be properly isolated are sent at once to the hospital, and it is believed that the disease will be kept under control. In addition to this watchfulness in the city, the quarantine officer examines all immigrants arriving at the port with the greatest care before they enter the cars, in order that no case may be carried along the lines of railroad leading from the city and spread the disease in the interior. On the 9th instant a case of small-pox was discovered in the city, the patient being a porter on a palace car running from Chicago to New York via Baltimore. The porter states that he left Chicago on the Saturday night previous in charge of cars 527 and 529; that one of the passengers on car 527 was very sick on the road, and he observed that his face was covered with an eruption, and that he avoided the other passengers. This person left the train at Wilmington, Delaware. On the arrival of the train at Jersey City the porter was unable to attend to his duties and returned to his home in Baltimore, were his sickness developed as above stated. On learning the circumstances connected with this case the railroad company was immediately notified and advised to thoroughly fumigate the car in question.

BOSTON, MASS.—C. E. Davis, jr., clerk, writes, under date of December 10, that 24 cases of diphtheria, 7 of scarlatina, 2 of small-pox, and 19 of typhoid fever were reported during the week ending on that day.

CAMBRIDGE, MASS.—Dr. A. F. Holt, health officer, reports one case of small-pox during the week ending December 10.

JEFFERSON, TEX.—Dr. George R. Beard, secretary of the board of health, reports a total of 12 deaths from all causes during the month of November. Of these 7 were white and 5 colored.

MERIDIAN, MISS.—Dr. M. J. Lowry, health officer, reports, under date of December 3, that typhoid fever and jaundice have been very prevalent in that vicinity.

MURFREESBORO', TENN.—Dr. J. B. Murfree writes, under date of December 10, that typhoid fever is prevailing as an epidemic.

NEW BEDFORD, MASS.—Dr. Charles L. Swasey reports one case of malignant confluent small-pox during the week ending December 10. The disease is believed to have been contracted in San Francisco.

PITTSBURGH, PA.—Dr. W. Snively, registrar, writes that 74 cases of variola and varioloid were reported during the week ending December 10.

PLEASANT HILL, MISS.—Dr. H. W. Gray reports, under date of December 10, that a low form of fever, typhoid in character, prevails in that vicinity.

RICHMOND, VA.—Dr. J. G. Cabell writes that 31 cases of small-pox, white 10, colored 21, were reported during the week ending December 10.

WHITEHALL, N. Y.—Dr. A. Dorval, health officer, writes, under date of December 10, that the past season has been a healthy one, but that scarlet fever has now made its appearance in many places.

DIAGRAM TO SHOW THE PROPORTION OF DEATHS PER 1,000 PER ANNUM AS RECORDED IN THE MORTUARY REPORTS FURNISHED THE NATIONAL BOARD OF HEALTH FOR THE FOUR WEEKS ENDING NOVEMBER 5, 12, 19, AND 26, 1881, FROM THE FOLLOWING PLACES.

[Oblique lines represent mortality under 5 years; horizontal lines represent mortality over 5 years; both represent total mortality per 1,000 per annum.]

ABSTRACTS FROM CONSULAR REPORTS.

ALEXANDRIA, EGYPT.—B. L. de Menasee, United States consular agent, reports a total of 338 deaths during the two weeks ending November 5, giving an annual death rate of 40 per 1,000 of the population. The city is reported to be free from epidemic diseases.

BARBADOES, WEST INDIES.—Robert Holly, United States consul, writes that no new cases of yellow fever were reported during the week ending November 25, and that if no other cases occur the quarantine will be raised November 30.

BOMBAY, INDIA.—United States Consul B. F. Farnham transmits report for the week ending October 18. The total number of deaths from all causes registered during that period was 452, being 5 less than in the previous week, 44 more than in the week ending October 19, 1880, and 20 less than the average number in the corresponding period of the last 5 years. Among the deaths reported there were 12 from cholera against 11 in the previous week.

HONOLULU, HAWAIIAN ISLANDS.—D. A. McKinley, United States consul, reports a total of 40 deaths from all causes during the month of October, being 11 less than the number registered in October, 1880. Of the total number of deaths but 2 occurred among children under 5 years of age. No diseases of a contagious or infectious character are reported.

KOBÉ, JAPAN.—J. Stahel, United States consul, reports a total of 37 deaths during the two weeks ending October 29. Of this number 4 deaths were caused by cholera. During the week ending October 22, 5 cases of cholera were reported, 3 of which were fatal, and during the week ending the 29th there was 1 case and 1 death from that disease.

LAGUAYRA, VENEZUELA.—Winfield S. Bird, United States consul, reports, under date of November 13, that the city is in good sanitary condition and has been free from pestilential diseases during the past summer.

Continued on page 204.]

REPORT OF MORTALITY IN CITIES OF THE UNITED STATES FOR THE WEEK ENDING DECEMBER 3, 1881.

States.	Cities.	Total population, according to the United States Census of 1880.	Total number of deaths. [Continued from page 201.]

MALTA AND GOZO.—C. B. Eynaud, United States consul, transmits reports for the month of October. During that period 387 deaths from all causes were registered, giving an annual death rate of 30.14 per 1,000 of inhabitants against 27.50 in the corresponding period of 1880. Of the total number of deaths, 218, or 56.3 per cent., were of children under 5 years of age. A form of fever of the nature of dengue with varied eruption prevails generally throughout the islands. The disease, however, is not fatal, and aside from this epidemic the sanitary condition of the district is favorable.

MATAMOROS, MEXICO.—Warner P. Sutton, United States consul, reports 13 deaths during the week ending November 19, 7 of which were from diseases of the respiratory organs. He states also that the city is in bad sanitary condition.

MAZATLAN, MEXICO.—E. G. Kelton, United States consul, reports a total of 83 deaths during the month of October, giving an annual death rate of 66.4 per 1,000 of inhabitants. Among the deaths reported there were from phthisis, 9; from diarrhœal diseases, 10; from fever, 16; and from tetanus, 18.

MECCA, ARABIA.—Edward Van Dyck, esq., transmits from the office of the United States consul at Cairo, Egypt, the report of Dr. Wortabel, inspector of health at Hedjez, dated October 26. During the 24th and 25th there were 13 deaths from cholera at Mecca. On the arrival of the caravan at Medina there were 150 persons sick of cholera. On leaving Mecca but few deaths occurred daily among the pilgrims, but upon their arrival at a place called Kadriné, where the water is salty, the number of cases and the mortality greatly increased.

Later advices, received from United States Consul G. H. Heap, dated at Constantinople, November 13, state that the epidemic at Mecca, which had abated somewhat, suddenly increased to an alarming extent during the early part of the month, 581 deaths from cholera having been reported during the first five days. This great increase in the mortality is believed to be due to the vitiated atmosphere caused by the putrefying remains of great numbers of sheep which had been slaughtered near the city during the festivities of the season, and left upon the ground to rot. In addition there was a large accession of pilgrims from India, who had come to the feasts, which caused great crowding among these people, and undoubtedly had its influence in producing disease. The pilgrims will soon separate to return to their homes, and it is feared they will carry the disease to the several countries from which they came.

MELBOURNE, AUSTRALIA.—O. M. Spencer, United States consul, reports 457 deaths from all causes during the month of August in Melbourne and suburbs, embracing a radius of ten miles, being an excess of 58 over the average number for the corresponding period in the last ten years. The annual death rate per 1,000 of population was 19.4.

NASSAU, NEW PROVIDENCE, BAHAMAS.—Thomas J. McLain, jr., United States consul, reports, under date of November 26, that the town is in good sanitary condition and never more healthy than at present. The drainage is good, the town is kept clean, and no conditions unfavorable to public health are known to exist.

POINT-À-PITRE, GUADELOUPE, WEST INDIES.—United States Consul Charles Bartlett transmits reports for the three weeks ending November 5, during which period there were 33 deaths from all causes. One case of yellow fever is noted in the reports for the weeks ending October 29 and November 5, but no deaths are reported as having resulted from the disease. The town is in bad sanitary condition, and malarial fevers are prevailing.

PORT AU PRINCE, HAYTI.—John M. Langston, United States minister resident, reports a total of 26 deaths from all causes during the two weeks ending November 15, giving an annual death rate of 22.6 per 1,000 of inhabitants. The city is in fair sanitary condition, and no cases of contagious or infectious disease are reported.

RIO DE JANEIRO, BRAZIL.—Thomas Adamson, United States consul-general, reports a total of 182 deaths during the week ending November 5. Among the deaths reported there were from yellow fever, 1; from small-pox, 6; from typhoid fever, 2; pernicious fever, 9; and from consumption, 29. During the month of October there were 18 deaths from small-pox. The disease, however, is not yet regarded as having assumed the form of an epidemic.

ST. PETERSBURG, RUSSIA.—Edgar Stanton, United States consul-general, reports 497 deaths from all causes during the week ending October 29, giving an annual death-rate of 38 per 1,000 of inhabitants. Fevers are reported as prevailing. Among the deaths reported were 4 from small-pox, 34 from typhoid fever, and 38 from other contagious or infectious diseases.

SANTA CRUZ, TENERIFFE.—W. H. Dabney, United States consul, reports, under date of October 29, that an epidemic of measles is prevailing; 54 cases were reported during the week, against 44 in the previous week. The sanitary condition of the port is not satisfactory.

SINGAPORE, INDIA.—A. G. Studer, United States consul, reports, under date of October 17, that the city and port are in good sanitary condition and free from pestilential diseases. Fears, however, are entertained that the cholera, reported so prevalent in Aden, Japan, and in the ports of Java, in constant and frequennt communication with Singapore, may be introduced through the shipping.

VERA CRUZ, MEXICO.—United States Consul S. T. Trowbridge transmits reports for the three weeks ending November 13, during which time there were 14 deaths from yellow fever and 2 from small-pox. There is a great deal of sickness in the city, attributed to the damp and sultry weather.

VICTORIA, BRITISH COLUMBIA.—Allen Francis, United States consul, reports one death from typhus fever during the week ending November 19. He states, also, that small-pox prevails in nearly all the ports of Puget Sound.

VIENNA, AUSTRIA.—United States Consul-General James R. Weaver reports a total of 338 deaths during the week ending November 5, giving an annual death-rate of 24 per 1,000 of inhabitants. Among the deaths reported were 26 from small-pox, 8 from diphtheria, 7 from typhoid fever, and 68 from consumption.

WARSAW, RUSSIAN POLAND.—Joseph Rawicz, United States consul, reports 24 deaths from small-pox during the week ending October 29. The total number of deaths during the week from all causes was 284, giving an annual death-rate of 38.9 per 1,000 of inhabitants.

NOTICE.—In filling the reports on the postal cards for cities and hospitals, the figures are frequently so placed between the lines as to leave the disease intended entirely uncertain, except in cases where the judgment of the compiler may enable him to determine which is meant. This may be avoided by a stroke of the pen after the disease to be recorded. The *total* numbers should be placed in their proper columns, and no figures placed immediately after the word *total* will be noted in the tables. Those who report *still-births* will please note them separately, as they are not included in the tables of mortality in the BULLETIN.

REPORT ON SMALL-POX IN SAINT LOUIS, MO.

Dr. Ludcking furnishes the following report on small-pox in Saint Louis, during the past year, together with the law regulating the matter of contagious diseases in that city.

He states also that the health authorities have at this time a number of physicians employed at the dispensary, in the public and private schools and large tenement houses vaccinating all who may desire it, and that nearly nineteen thousand bovine vaccine quill-points have been distributed during the year.

1881.	Cases of small-pox found in the city.	Cases allowed to remain in city.	Cases died in city.	Cases taken to small-pox hospital, six miles south of southern city limit.	Cases died at small-pox hospital.

The following are the provisions of the statutes relating to contagious or infectious diseases:

SEC 5. It shall be the duty of each and every practicing physician of the city of Saint Louis: First. To report to the health commissioner or nearest police station every case of small-pox or contagious disease he may be called on to attend within limits of the city or within ten miles thereof within twelve hours after he shall have examined the patient, with the number of the house, the name of the occupant and the street. Second. Whenever required by the health commissioner to report to him, at such times and in such forms as he may prescribe, the number of persons attacked with any pestilential, contagious, or infectious disease, attended by such physicians, within twelve hours next preceding, and the number of persons attended by such physician who shall have died within twelve hours next preceding such report of any pestilential, contagious, or infectious disease.

SEC. 6. Whenever any physician shall report to the health commissioner any case of small-pox or contagious disease in any dwelling or building in the city of Saint Louis, the health commissioner shall have the power, whenever in his opinion it is necessary, to cause to be placed on the outside of any building or dwelling or door of any room a printed placard giving notice of the existence of such contagious disease. Any person who shall remove such placard, placed by order of the health commissioner, shall be deemed guilty of a misdemeanor, and upon conviction be fined not less than five nor more than twenty-five dollars.

SEC. 7. Any practicing physician who shall neglect or refuse to perform the duties required of him by this article shall be deemed guilty of a misdemeanor, and upon conviction shall be fined not less than ten nor more than fifty dollars.

* * * * *

SEC. 10. Whenever the health commissioner shall become apprised or informed that any person or persons residing in any hotel, boarding house, or tenement house within the limits of the city of Saint Louis are suffering from any malignant, infectious, or contagious disease, which in his opinion or the opinion of any medical officer of the health department may endanger the lives of the citizens, it shall be his duty to make or cause to be made an examination of the said person or persons, and the disease they are suffering from or afflicted with, and from and after such examination, if he shall deem the same necessary, he shall cause said person or persons to be removed from the said hotel, boarding house, or tenement house to the hospital provided by the city for the treatment of all such diseases.

SEC. 11. Whenever the health commissioner shall become apprised or informed that any person or persons residing in any private residence, house, or dwelling within the limits of the city of Saint Louis are suffering from any malignant, infectious, or contagious disease, which, in his opinion, or the opinion of any medical officer of the health department, may endanger the lives of citizens, and which from the surroundings of the premises, the size of the house, and the number of persons residing therein, would make it impossible to isolate the said person or persons so afflicted from all connection or contact with other persons residing in the same house (except the nurses), it shall be his duty to make, or cause to be made, an examination of the premises and surroundings, and also an examination by a medical officer of the health department of the said person or persons, and the diseases they are suffering from or afflicted with, and from and after such examination of the premises and the person or persons, if he shall deem the same necessary, he shall cause said person or persons to be removed from said private residence, house, or dwelling to the hospital provided by the city for the treatment of all such diseases: provided, that the health commissioner shall permit one member of the family of the sick person to accompany the sick person to the hospital, there to remain as a nurse until such sick person is discharged from the hospital.

CHOLERA IN JAPAN.

QUARANTINE REGULATIONS.

United States Consul-General Thomas B. Van Buren furnishes the following regulations adopted by the Japanese Government for the medical inspection of vessels during the continuance of the cholera epidemic now prevailing in Osaka and the neighboring districts. The United States consular officers were promptly notified by the Japanese authorities of the appearance of cholera in the empire, and they were urged to take such steps as would enable American citizens to avoid the infected districts:

REGULATIONS FOR THE MEDICAL INSPECTION OF VESSELS ARRIVING AT THE PORT OF YOKOHAMA, OR AT ANY OPEN PORT IN JAPAN.

1. All vessels arriving from localities infected with cholera shall be subjected to medical inspection.

When there are no cholera patients or the bodies of persons who may have died from the said disease on board such vessels, the health officers shall, upon receiving the report of the inspecting officer to that effect, grant permission to land passengers and cargoes directly.

2. All vessels having cholera patients or the bodies of persons who may have died from said disease on board, shall be required to anchor at a place designated by the health officers at a safe distance from other vessels. The patients shall be removed to the quarantine hospital, or when the disease has been fatal, the bodies, if not already disposed of, shall, at the option of the persons interested, be either burned at a place prepared for that purpose, or buried, after undergoing thorough disinfection. The health officers may permit the passengers to land after being thoroughly disinfected, and shall order the disinfection and fumigation of infected vessels and their dangerous cargoes, after which said vessels may be permitted to proceed to their destinations and communicate with other vessels.

3. Any person or persons violating any of the provisions of the foregoing regulations shall be deemed to be guilty of a misdemeanor, and shall, upon conviction thereof, be punished therefor by the proper authorities.

WINCHESTER, VA.—Dr. W. S. Lane reports 6 cases of small-pox during the week ending December 10, and states that the disease is confined to two tenements.

PITTSBURGH, PA.—Dr. W. Snively, registrar, writes, under date of December 3, that 71 cases of small-pox were reported during the week ending on that day. Of these, 28 proved fatal.

SAINT LOUIS, MO.—Dr. R. Ludcking states, in forwarding his report for the week ending December 3, that seventeen cases of small-pox were sent from the city to the small-pox hospital, and the physician in charge has reported one death. He also reports that during the week ending December 10, 11 cases were sent to the hospital, and 7 deaths were reported. The hospital is located six miles south of the city.

WILMINGTON, DEL.—Dr. E. B. Frazer, registrar, writes, under date of December 3, that small pox has disappeared, and that not a case is now known to exist in the city.

NOTICE.—Extra copies of the BULLETIN will be furnished at this office at the rate of *five cents* per copy. Notice of at least one week should be given when a large number is required.

CHOLERA IN THE EAST.

Temporary regulations for the cholera on the occasion of the pilgrimage, adopted on the 15th ultimo by the International Sanitary Council of Health in session at Constantinople.

ART. 1. Every native production from the coast of the Red Sea with or without pilgrims on board, in addition to the quarantine purification in an Egyptian port (at Thor or at El-Wetch) will go through the quarantine regulations in a port of Turkey at the lazaretto.

ART. 2. The lazaretto ports, to the exclusion of all others, are those of Beyrout for Syria and for Tripoli, of Smyrna for Turkey in Asia and Europe, and of Bassora for the Gulf of Persia.

ART. 3. The duration of quarantine of the pilgrims, and of the vessels which transport them, is 10 days counting from the day of landing at the lazaretto.

ART. 4. The quarantine of vessels without pilgrims on board and of all productions other than those from the Red Sea is to be in accordance with articles 4 and 5 of general regulations for cholera.

ART. 5. Vessels on board of which the symptoms of cholera may manifest themselves will be subjected to the maximum of the quarantine and the prescriptions established by the general regulations for cholera. They will only receive pratique by express authority of the council of health.

ART. 6. The vessels without pilgrims, but where the hygienic conditions and the state of the coast are not satisfactory, although without cholera symptoms, will be placed in the category of vessels trying to escape the rules, and subjected to the quarantine for cholera. Pratique will only be accorded to them upon previous deliberation of the council.

ART. 7. As long as Egypt shall be exempted from cholera, sailing vessels and steamers leaving originally her ports from the Mediterranean, and which have not pilgrims on board on return, are subjected in the Ottoman ports—exclusively in those where a sanitary physician resides—to a quarantine of observation of 24 hours, with two medical visits, on arrival and at departure.

ART. 8. In view of the insecurity of the Jaffa road, steamers in the aforesaid category, which run between Egypt and Syria, may omit the observation of 24 hours, *en route* to Beyrout, under the guard of an agent of the health accompanying them; they even may leave at Jaffa merchandise and take some on board under the surveillance of the office of health.

ART. 9. The rules concerning quarantines applicable to Hoddeida and Camaran, on the occasion of the pilgrims going to Mecca, rules now without purpose, are repealed.

ART. 10. The productions of Aden, destined from the ports of Turkey of the Mediterranean, are in the same category as those of the Red Sea, and subjected to the same rule.

The productions of Aden and of Bombay without pilgrims, on their return on board are treated at Bassorah in accordance with articles 4 and 5 of the general regulations for cholera.

ART. 11. Every vessel, whether sailing vessel or steamer, proceeding from Egypt, with or without pilgrims on board, and being subjected to the quarantine regulations according to the category to which it pertains, will be subjected, cargo and passengers, to one individual medical inspection at the Turkish ports of arrival in the Mediterranean. If its destination is Constantinople, the medical visit will take place at the Dardanelles before having authority to enter the Marmora.

ART. 12. By the way of the land organized military cordons are established, 1st, between El-arich and the Dead Sea, Syro-Egyptian frontier; 2d, upon the border of the desert between Arabia and Mesopotamia; 3d, at the environs of Damascus, for the Mecca and Medina caravans.

The duration of this quarantine is 10 days, but to be prolonged in case of cholera symptoms. The whole to conform to the general orders for the regulation of cholera, 1867.

[Telegram from Djedda, November 8, sent by way of Aden November 13.]

At Mecca, November 5, 270 deaths from cholera. The 6th, up to the time of the departure of the courier, 137. From ordinary diseases in 12 days, 79 deaths. WORTABEL.

[Telegram faom Djedda, November 8, by way of Aden, November 13.]

Cholera has been found among the pilgrims by means of pilgrims arriving here (Djedda) from Mecca. WORTABEL.

[Telegram from Alexandria, November 13, sent by Mr. Birnsenstein.]

In the session of yesterday it was decided that vessels bearing the productions from the Red Sea with pilgrims shall be subjected to 15 days of quarantine at El-Wetch, and 10 days more at Thor, and shall pass the canal in quarantine. Vessels without pilgrims will be quarantined 10 days at Thor. Vessels from Aden, without cholera symptoms, will undergo a quarantine of observation for 24 hours, or will pass the canal in quarantine. BIRNSENSTEIN.

[Telegram communicated to the sanitary administration by M. Strekoulis, delegate of the Netherlands, received from the Hague, November 16.]

LEGATION OF NETHERLANDS.
Hague, November 15.

Please inform the delegate of the sanitary council that after the telegram of November 6, cholera diminished at Sacrabaya, Samarang, Batavia, but increased at Demak, Sidaspe, Grissy, Malong, and Bandong. ROCHUSSER.

[Telegram sent from Alexandria November 19.]

Dispatch from Wortabel, Djedda, November 11—Suakim, November 18—states that the number of deaths from cholera is diminishing. Mecca November 8, 163; 9th, 129. At Djedda since September there have been 53 deaths.

[Telegram from Djedda, sent by way of Aden November 21.]

Mortality from cholera at Mecca, November 11, 75 deaths; 12th, 70; 13th, 45. At Djedda, November 7, 5 deaths; November 8, 5 deaths; November 9, 13 deaths; November 10, 13 deaths; November 11, 24; November 12, 6; November 13, 8. WORTABEL.

[Telegram from Alexandria, November 22.]

News from Djedda, November 17, cholera at Gambo; deaths at Mecca and Djedda diminishing. BIRNSENSTEIN.

National Board of Health

BULLETIN.

VOL. 3.] WASHINGTON, D. C., SATURDAY, DECEMBER 24, 1881. [No. 26.

SMALL-POX IN THE UNITED STATES.

Reports received to December 17 show that small-pox now prevails to a greater or less extent in sixteen States and two Territories, as follows: In Boston, Holyoke, and New Bedford, Mass.; New York City, N. Y.; Hudson County, N. J.; Philadelphia, Pittsburgh, Allegheny, and Midway, Pa.; Wilmington, Del.; Baltimore, Md.; Richmond, Lynchburg, and Winchester, Va.; New Orleans, La. (1 case reported); Little Rock, Ark.; Cincinnati, Ohio; Madison, Ind.; Chicago and Elgin, Ill.; in Antrim, Berrien, Grand Rapids, Leenawa, Travers, and Van Buren counties, Michigan; Saint Louis, Mo.; San Francisco, Cal.; in Oregon and in the Territories of Washington and Montana. The number of deaths from smallpox reported during the week was 105.

SMALL-POX REGULATIONS IN CALIFORNIA.

The following circular and sanitary rules to be observed during the prevalence of small-pox have been published by the State board of health of California:

CIRCULAR.

To the Public:

At a regular meeting of the State board of health, held in this city January 16, 1880, the president and secretary were directed to issue a circular, whenever, in their judgment, the presence of small-pox in the State seemed to demand it, impressing upon citizens the importance of vaccination, and urging its general adoption. Cases of small-pox had then recently occurred in the metropolis of the State, and in or near some other neighboring cities; and, although the disease had nowhere reached the measure of an epidemic, and there was no occasion for immediate alarm, it seemed the part of prudence to take early warning and prepare for its possible more general prevalence. The constant communication going on between the city of San Francisco and the interior of the State favored at least a liability that citizens of the latter might contract disease and convey it to their homes.

The circular issued at that time is applicable to the present. It read as follows:

"It has been recognized as a part of the history of small-pox that it occurs at certain intervals, at periods not absolutely accurate or well defined, indeed, but sufficiently distinct to attract attention. It is probable that this periodicity is due to changes taking place in the population more than to any inherent law of the disease. During the prevalence of an epidemic of small-pox, almost every one, under the influence of fear or by force of municipal law, is sooner or later subjected to vaccination, and upon many of those previously vaccinated the operation is repeated. Only the unprotected are attacked, and the epidemic dies out at length for want of fuel. A period of rest ensues, during which a certain proportion of adults who have been vaccinated in youth acquire renewed susceptibility, and others have been gradually but continuously added to the population by birth or immigration who have never had the disease nor been vaccinated. The fertility of the soil is renewed, ready for the reception and propagation of the germs whenever accidentally introduced.

"We, in California, have passed through one of these periods of rest. Numbers have been added to the population of both city and country, and inasmuch as where there is no cause for alarm the duty of vaccination is likely to be postponed, many of these are now unprotected; new material available for the disease has sprung up.

"While, therefore, the necessity of vaccination with those who have never been subjected to this safe and simple expedient is, in times of threatened danger, specially urgent, this necessity does not apply solely to them. It is a conceded fact in the history of vaccination that, in very many cases, the immunity it affords is only limited, or for a time. Perfect while it lasts—as perfect, it is believed, as a previous attack of small-pox itself—the duration of the insusceptibility varies with different individuals. Though in some instances it is unquestionably permanent through life, it is safe to say that revaccination should always be tried after the expiration of eight or ten years, or, otherwise, whenever during the prevalence of small-pox it is desirable to be assured of protection. By the observance of this rule, and the general adoption of primary vaccination in youth, it is equally safe to say that one of the most loathsome diseases which afflict mankind may be effectually robbed of its terrors.

"In thus urgently recommending a general resort to vaccination as a means of protection against small-pox, the State board of health cannot too strongly deprecate the careless and unscientific manner in which it is often performed and its results determined. In very many cases such vaccinations serve only to deceive through a false sense of security.

"Attention is respectfully called to the following general rules, the value of which has been demonstrated by the experience of the medical profession:

"1. The virus used should be of known purity. Whether in the form of the dried crust, or as lymph, certain precautions are necessary for the safe and effectual performance of the operation. This it should be the duty of the family physician to attend to. Self-vaccination, or vaccination performed by unprofessional friends, unqualified to distinguish the *true* sore or vesicle from that which is spurious, affords but slight protection against small-pox. It is at least uncertain. It may be genuine, or it may not. It is to this cause that so many reputed failures in the conservative influence of vaccination are to be attributed, and that the process itself has been regarded by many with suspicion and distrust.

"2. Revaccination during the prevalence of an epidemic, or after the lapse of eight or ten years from the primary operation, is considered necessary. A scar upon the arm, the result of a previous vaccination, affords no certain evidence that the protective influence is not lost. It has been observed that vaccination performed during the active period of an epidemic is apt to be more severe in its effects than under other atmospheric conditions.

"3. Virus obtained from the arms of revaccinated persons should never be employed. There is no evidence that it possesses any protective power.

"4. With care in the selection of virus, the danger of contracting disease thereby is reduced to a minimum. It is pretty certain that only *one* disease ever has been introduced by vaccination, and with ordinary care this is impossible. It is better to avoid virus taken from adults.

"5. The dangers attributable to the operation itself are too light to weigh against its positive benefits. It has been estimated that one serious accident may occur in one case in 100,000; certainly not more frequently than would be expected from any similar wound or abrasion of the skin. Properly done, with due precaution as to the health and vigor and the age of the subject, and the source of the virus used, it may be confidently affirmed to be altogether without danger.

"6. No so-called vaccination which does not result in what is known as a characteristic sore or vesicle, pursuing regular changes or periods of development, is safely to be relied upon. Not infrequently the sore upon the arm arising from the insertion of worthless virus is even more severe than that resulting from the genuine lymph.

"There is no other method than that universally adopted of making the insertion upon the abraded skin or beneath the skin of some portion of the body, which can, with any degree of safety, be relied upon.

"7. It is an interesting fact in the history of contagious diseases, and one of great practical importance, that a certain more or less definite time intervenes between the reception of the contagion and its manifestation in the body of the individual affected—a period of latency called the period of incubation—during which certain processes are going on in the system which are somehow preparatory to the development of the disease.

"In small-pox, this period may be stated, in a general way, to be twelve days for the beginning of fever, or fourteen for that of the

[Continued on page 220.]

ABSTRACTS FROM CONSULAR REPORTS.

ALEXANDRIA, EGYPT.—B. L. de Menasey, United States consular agent, reports 284 deaths from all causes during the two weeks ending November 12. No contagious or infectious diseases are reported as existing in the city Annual death-rate per 1,000 of population, 35.3.

AMSTERDAM, NETHERLANDS.—D. Eckstein, United States consul, reports 470 deaths during the three weeks ending November 19. Among these were 1 from typhoid fever, 2 from typhus fever, and 16 from other contagious or infectious diseases. The number of cases of contagious diseases in the city is not obtainable. The annual death-rate per 1,000 of population was 25.1.

BARMEN, GERMANY.—Wolfgang Schoenle, United States consul, reports a total of 81 deaths from all causes during the two weeks ending November 26. Of the deaths reported, there were 8 from scarlet fever, 4 from croup, 18 from consumption, 6 from acute diseases of the lungs, 5 from diarrheal diseases, and 30 from causes not given. The annual death-rate per 1,000 of population was 22.1. Of the total deaths, 18, or 17.4 per cent., were of children under 5 years of age.

BERLIN, PRUSSIA.—W. S. Brewer, United States consul-general, reports a total of 1,032 deaths from all causes during the two weeks ending November 19. The annual death-rate per 1,000 was 23.8. Diphtheria and scarlet fever are reported as prevailing diseases.

BOMBAY, INDIA.—United States Consul B. F. Farnham reports that during the week ending October 25 the total number of deaths registered was 448, being 4 less than in the preceding week, and 52 less than during the corresponding week in 1880, and 24 less than the mean for this period in the preceding five years. The annual death-rate per 1,000 of population was 28.38. Of the deaths reported, 3 were from cholera, being 8 less than the number registered in the previous week. The disease is diminishing throughout the entire district. In Amednuggur and Sattara, where cholera has existed for a longer period than elsewhere in this presidency, the authorities report a great falling off in the number of cases. The ratio of mortality to cases, however, during the past two weeks remains about the same in Amednuggur Taluka, while it has increased in both this district and in Sattara, as will be seen from the following table:

	Week ending October 12.		Week ending October 19.	
	Cases.	Deaths.	Cases.	Deaths.
Amednuggur Taluka	30	15	18	8
Amednuggur district	150	66	121	66
Sattara	408	118	267	91

In the Surat district, where at one time the disease was more virulent than in any other part of India excepting in Lahore, there were but eleven cases during the week, distributed in the towns of Bardoli, Chekhli, and Mandvi. Of these cases two were fatal.

The deaths from diseases of the respiratory organs, diarrhœa, and dysentery were 85, 19, and 13, respectively, against 39, 22, and 20 in the corresponding week of last year. The number of births reported during the week was 301, being 147 less than the number of deaths.

BRADFORD, ENGLAND.—C. O. Shepard, United States consul, reports a total of 58 deaths from all causes during the week ending November 26, giving an annual death-rate of 16.4 per 1,000 of population. From the principal zymotic diseases there were 7 deaths, including 4 from scarlet fever and 3 from whooping-cough. Under the law requiring physicians to report cases of sickness coming under their care, 20 cases of scarlet fever, 3 of typhoid fever, and 1 of diphtheria were reported.

BRESLAU, GERMANY.—Henry Dithmar, United States consul, reports 313 deaths from all causes during the two weeks ending November 19, giving an annual death-rate of 29.89 per 1,000 of population. Diseases of the respiratory organs are reported as prevalent.

BRUSSELS, BELGIUM.—The United States consul reports a total of 204 deaths from all causes during the three weeks ending November 26, giving an annual death-rate of 22.5 per 1,000 of inhabitants. Of the deaths registered there were 20 from diarrhœal diseases, 11 from acute lung diseases, and 32 from phthisis pulmonalis. Deaths under 5 years of age, 81.

BUCHAREST, ROUMANIA.—John Hunt, United States consul, reports a total of 102 deaths during the week ending November 26. Annual death-rate, 26.8 per 1,000. Principal causes of death, measles, 2; scarlatina, 1; diphtheria, 2; typhoid fever, 3; phthisis pulmonalis, 14; pneumonia and bronchitis, 21; diarrhœal diseases, 14.

BUDA-PESTH.—The United States consul, under date of November 19, 1881, reports: Deaths from all causes, 213; from small-pox, 15; scarlatina, 10; typhoid fever, 3; births, 240; population, 378,159.

BUENOS AYRES, ARGENTINE REPUBLIC.—E. L. Baker, United States consul, reports 506 deaths from all causes during the month of September. Of these there were 14 deaths from typhoid fever and 9 from diphtheria. Annual death rate, 21.7 per 1,000 of inhabitants. He states also that the national health department is adopting measures to prevent the introduction of yellow fever during the approaching summer months.

CADIZ, SPAIN.—Ernest L. Oppenheim, United States consul, reports 94 deaths from all causes during the two weeks ending November 19. Annual death rate, 41.4 per 1,000.

CALCUTTA, INDIA.—A. B. Colvb, United States vice-consul-general, reports 238 deaths during the week ending October 12, giving an annual death-rate of 28.9 per 1,000 of inhabitants against 26.7 in the previous week. Among the deaths registered were 76 from fevers; 23 from diarrhœal diseases; 29 from tetanus; and 14 from phthisis pulmonalis. The report of the health officer of Calcutta for the third quarter of 1881 is also received, giving a total of 2,653 deaths from all causes during the quarter; an excess of 253 as compared with the third quarter of 1880, though the mortality was below the average of the corresponding period in the past ten years. The mortality from fever was below the average of past years. Of small-pox the report states that but one fatal case occurred during the quarter. Cholera prevailed with rather more than average severity. The number of deaths from this disease during the quarter was 188, being 131 in excess of the number reported in the third quarter of 1880 and 63 in excess of the mean for the corresponding period in the last ten years.

CHRISTIANIA, NORWAY.—Gerhard Gade, United States consul, reports 127 deaths during the three weeks ending November 26, giving an annual death-rate of 18.33 per 1,000 of inhabitants. During this period 1,546 cases of measles and 9 cases of scarlet fever were reported. But 11 deaths occured from measles. No deaths were reported from scarlet fever.

DEMERARA, BRITISH GUIANA.—P. Figyelmesy, United States consul, transmits the mortality reports for Georgetown and New Amsterdam during the month of October. In Georgetown the total number of deaths was 205, of which number 91 occurred in hospitals, and 40 were of children under 1 year. Among the principal causes of death were the following: Yellow fever, 37; diarrhœal diseases, 20; fevers, 18; and phthisis pulmonalis, 17. In New Amsterdam the total number of deaths was 33. Of this number there was one from yellow fever; 1 from diarrhœa; 5 from remittent and other fevers; 6 from phthisis pulmonalis; and 3 from pneumonia. Of the 33 deaths, 17 occurred in hospitals and 3 were of children under 1 year.

DUBLIN, IRELAND.—A. B. Wood, United States consul, transmits the report of births and deaths in the Dublin registration district for the two weeks ending November 26. The district comprises the city of Dublin and fifteen urban sanitary districts, with an aggregate population of 843,812. The total number of deaths registered during this period was 764, giving an average annual death-rate of 23.5 per 1,000, ranging from 16.0 at Galway to 45.7 at Newry. The principal causes of death reported are as follows: Small-pox, 2; measles, 13; scarlet fever, 34; diphtheria, 4; whooping-cough, 4; typhus fever, 7; typhoid fever, 6; diarrhœa, 20; phthisis pulmonalis, 88; and diseases of the respiratory organs, 178. Of the deaths registered, 155 were of children under 1 year, and 166 of persons 60 years and upwards. Births registered, 807, being an excess of 43 over the number of deaths. Of the deaths from typhus fever, 3 occurred in Dublin 2 in Cork, and 1 each in Limerick and Queenstown.

DUNDEE, SCOTLAND.—Walter Baxter, United States vice-consul, reports 70 deaths from all causes during the week ending November 12. He also states that 6 cases of typhus fever were reported during the week.

GENOA, ITALY.—J. F. Hazelton, United States consul, reports 108 deaths during the week ending November 12, giving an annual death-rate of 30.4 per 1,000 of inhabitants.

[Continued from page 213.]

GHENT, BELGIUM.—Thomas Wilson, United States consul, reports 214 deaths during the month of October, as follows: Consumption and lung diseases, 41; bronchitis, 29; diarrhœal diseases, 41; heart diseases, 25; all other diseases, 74. Annual death-rate per 1,000 of population, 19.0.

GLASGOW, SCOTLAND.—W. Gibson, United States vice-consul, transmits reports for the three weeks ending November 26. Total deaths, 922. Of this number there were 38 from typhoid fever. Pneumonia, bronchitis, and pleurisy are reported as prevailing diseases.

HAVANA, CUBA.—R. O. Williams, United States vice-consul-general, reports 101 deaths during the week ending November 19, of which 8 were from yellow fever. During the week ending December 3, he reports 8 deaths from yellow fever.

LEITH, SCOTLAND.—J. A. Leonard, United States consul, reports 43 deaths during the two weeks ending November 26, giving an annual death-rate of 18.1 per 1,000. He also transmits the weekly return of births and deaths in the eight principal towns of Scotland for the same period. Aggregate population, 1,206,057. Total number of deaths, 987. Average annual death-rate, 21.3. Of the deaths reported there were 22 from measles, 42 from scarlet fever, 36 from diphtheria, 26 from whooping-cough, 22 from fever, 42 from diarrhœa, and 214 from bronchitis, pleurisy, and pneumonia.

The lowest rate of mortality, 15.8, was recorded at Paisley, and the highest, 25.0, at Dundee.

LIVERPOOL, ENGLAND.—S. B. Packard, United States consul, transmits reports for the three weeks ending November 26. Total deaths, 886. During this period 5 cases of small-pox, 20 cases of typhoid fever, 59 cases of typhus, 174 cases of scarlatina, 289 of measles, and 5 of diphtheria were reported.

LONDON, ENGLAND.—J. Nunn, United States consul, transmits the report of the registrar-general giving the mortality in twenty large English towns during the week ending November 19. Aggregate population, 7,608,775. Total deaths, 3,000. Average annual rate of mortality, 20.6 per 1,000. The lowest rate of mortality, 17.2, was recorded in Norwich, and the highest, 27.6, in Hull. Scarlet fever still continues as an epidemic in Hull, 41 fatal cases having occurred during the week, making 470 since July last. The total number of deaths in London was 1,434, giving an annual death-rate of 19.5 per 1,000 against 22.3 in the previous week. Of the total number there were 13 from small-pox, 35 from measles, 40 from scarlet fever, 33 from enteric fever, 15 from diphtheria, 43 from whooping-cough, 9 from typhus fever, and 345 from diseases of the respiratory organs.

MESSINA, SICILY.—George H. Owen, United States consul, transmits reports for the months of June and July last. During the month of June there were 180 deaths, and during July, 245. Diphtheria, typhoid fever, bronchitis, and pneumonia are reported as prevailing diseases. The annual death-rate per 1,000 during the two months was 32.6.

MONTEVIDEO, URUGUAY.—A. L. Russell, United States consul, furnishes reports for the months of July and August. Total number of deaths in July, 343; in August, 337. Annual death-rate during the two months, 36.9. Prevailing diseases, small-pox, lung diseases, and diarrhœal diseases, from which there were 69, 138, and 40 deaths, respectively. Of the total number of deaths, 176 occurred without medical attendance.

PARIS, FRANCE.—The bulletin for the week ending November 24 gives a total of 1,022 deaths from all causes during that period. Population, 1,988,806. Annual death-rate, 26.3. Of the deaths registered there were 43 from typhoid fever, 13 from small-pox, 12 from measles, 48 from diphtheria and croup, 36 from meningitis, 186 from phthisis pulmonalis, and 104 from bronchitis and pneumonia.

[Continued from first page.]

eruption; in the vaccine disease or cowpox, it is three or four; and such is the protective or antagonistic power of the latter, that if its virus or contagion be inserted even after exposure to small-pox, its shorter incubative period enables it to anticipate the other, and, if it do not altogether prevent it, to induce such a deviation from its regular course as to essentially modify it and deprive it of its greatest danger. Hence the importance of an early vaccination after exposure to small-pox.

"8. Bovine virus, or that taken directly from the cow, is fashionable, and, in consequence of the excellent arrangements which have been made by different parties, it can at all times be obtained fresh and pure. It is reliable, and it is to be recommended. Yet there is strong reason to believe, and such is the opinion of the highest authorities on this subject, that *humanized* virus, obtained from the arm of a healthy child, loses none of its protective efficacy, even when propagated through generations."

During the past month, cases of small-pox have occurred in different sections of the State, having been imported by immigrants upon the cars of the Central Pacific Railroad. The great prevalence of small-pox in Chicago, and the constant communication with that city by rail, afford easy means for the conveyance of the specific poison to California. We have, in fact, illustrations of this influence in the instances alluded to—infected persons having been received into the cars at that city, thus communicating the disease to their fellow-passengers; or, parties having been exposed to small-pox there, become its victims after their arrival here.

The precautions indicated in the above circular of the State board of health receive, therefore, new force at this time, and the board cannot too strongly urge upon all who have not been vaccinated, or who have not been *revaccinated* since the age of fourteen or fifteen years, to seek the protection which so simple and harmless an expedient affords. It should be remembered that even the mildest case of varioloid is capable, equally with the most severe one of genuine small-pox, of communicating the worst form of the disease.

Attention is called to the following sanitary rules to be observed during the prevalence of small-pox:

PRECAUTIONS AGAINST THE SPREADING OF SMALL-POX.

1. *Perfect isolation of the sick.* In cities, or where a suitable hospital has been provided, this is best secured by removal of the sick. In country districts the end may be attained by allowing only nurses and attendants to visit the sick-room, and these to see no other persons during the continuance of their services as such, without having changed their clothes or subjecting them to thorough disinfection.

2. All persons exposed to the contagion should be *immediately revaccinated, even though the experiment may have been unsuccessfully tried only a short time previously.* Possibly the vaccination may have been imperfect, or the virus inert.

3. After recovery from small-pox, the patient should not be permitted to go out, or to communicate with other persons, until the crusts have fallen off, and his clothing has been renewed or disinfected.

4. After death from small-pox, the beds and bed-clothes, carpets, curtains, and other articles in the room should be destroyed or disinfected by the method to be hereafter directed.

Inasmuch as the bodies of those dead by small-pox are still infectious, they should be disinfected, and public funerals should be avoided.

5. *Cleanliness in and about the dwelling*, and ventilation of the latter, afford efficient aids towards the success of other measures to prevent the spread of this and other contagious diseases.

RULES FOR DISINFECTION.*

The distinction between DISINFECTANTS and DEODORIZERS should be borne in mind. The former neutralize the germs of contagious or infectious diseases; the latter remove or destroy smells, or substitute one odor for another, and may or may not *disinfect*. The former are therefore to be preferred.

The DISINFECTANTS proper to be used vary with the object to be attained or the articles to be disinfected.

DISINFECTION OF THE ARTICLES ABOUT THE PATIENT.

Disinfect the sheets, towels, handkerchiefs, blankets, and other articles used about the patient, as soon as removed, by immersing them in a vessel or tub containing half a pound of sulphate of zinc (white vitriol), or half an ounce of chloride of zinc, or four ounces of the sulphate of zinc combined with two ounces of common salt to each gallon of boiling water. Boil for half an hour. The articles should be placed in the solution before being removed from the room. The discharges from the patient should be received in a vessel containing one of the above solutions, or a solution of half a pound of sulphate of iron (copperas) in one quart of water. The bodies of the dead may be disinfected by washing them with the solution of zinc and salt of double strength, and wrapping them in a sheet saturated with the same solution, or the zinc and carbolic acid solution mentioned above. It is advised, also, to sprinkle the floor with a solution of carbolic acid (one ounce) and sulphate of zinc (six ounces) to one gallon of water. Neither the sulphate of zinc solutions nor that of the chloride of zinc will stain or injure ordinary articles of clothing. These may, therefore, be used for

THE DISINFECTION OF THE CLOTHING.

Clothing which will not admit of being boiled, and which is too valuable to destroy, may be sprinkled with one of the last-named solutions, or the latter may be applied by means of a spooge, the articles themselves being subsequently exposed to the open air.

Other clothing, as silks, furs, woolen goods, and the like, to which the above means are not applicable, should be suspended in the room during its disinfection by the method immediately to be explained, and afterwards exposed to the open air. Furniture, pillows, mattresses, window-curtains, and carpets should at the same time be exposed to the process. It is advised that the carpets should be fumigated on the floor, and the mattresses ripped open for more thorough exposure.

DISINFECTION OF THE HOUSE OR INFECTED ROOM.

For this purpose sulphur is used. The rule is to take roll-sulphur broken into small pieces, place it on a metallic dish resting upon bricks set in a tub containing water, or upon other supports laid across the tub, pour a little alcohol upon the sulphur, and ignite it. Then immediately leave the room. Let the doors and windows be tightly closed, and kept so for a half a day. Then ventilate the apartment for several hours. One pound of sulphur is advised for one thousand feet of cubic air-space. The furniture and paint about the room may be subsequently washed and the walls whitened.

Other substances have been advised as disinfectants for the various purposes above alluded to, but those mentioned are cheap, effective, and within reach of all.

F. W. HATCH, M. D.,
Secretary State Board of Health.

SACRAMENTO, CAL., *October* 21, 1881.

H. GIBBONS, SR., M. D.,
President State Board of Health.

The rules for disinfection are substantially those recommended by the National Board of Health.

REPORTS OF CORRESPONDENTS OF THE NATIONAL BOARD OF HEALTH.

BUFFALO, N. Y.—Dr. A. H. Briggs writes, under date of December 10, that 7 cases of small-pox have been reported in the city.

CHICAGO, ILL.—Dr. M. K. Gleason reports 25 deaths from small-pox during the week ending December 17.

FORT SHAW, MONT.—Charles R. Greenleaf, surgeon, U. S. Army, writes, under date of December 7, that information has been received of the prevalence of small-pox at Helena, Butte, and Deer Lodge, places in Montana in communication with Fort Shaw. Measures have been taken to prevent the spread of the disease to the post.

HAVANA, CUBA.—Advices received from Havana, under date of December 10, state that there were 470 deaths from all causes during the month of November. Of this number there were 39 from yellow fever, 7 from typhoid fever, 6 from pernicious fever, and 1 from small-pox. During the week ending December 9 there were 7 deaths from yellow fever.

HERKIMER, N. Y.—Dr. A. W. Suiter writes, under date of December 10, that typhoid fever prevails in that vicinity and that it is caused by imperfect surface-drainage.

HOLYOKE, MASS.—Dr. L. F. Humeston reports 5 deaths from small-pox during the week ending December 17.

HUDSON COUNTY, N. J.—C. J. Rooney, jr., writes, under date of December 10, that small-pox prevails to about the same extent as during last week. Number of deaths during this week, 10.

MIDWAY, PA.—T. B. Robbins, superintendent Robbins Block Coal Company, reports, under date of December 14, that small-pox made its appearance among the colored people at the mines a short time since and there have now been 12 cases, one of them in Midway, a town of 1,500 inhabitants, about two miles distant. The first case occurred in the family of a colored woman, who had been attending a small-pox patient in Allegheny County, probably in Pittsburgh. Two of the cases have resulted fatally. Of the remaining cases all have recovered except two—one in Midway and the other at the mines. A small-pox hospital has been erected and every effort made to prevent the spread of the disease.

National Board of Health

BULLETIN.

VOL. 3.] WASHINGTON, D. C., SATURDAY, DECEMBER 31, 1881. [No. 27.

SMALL-POX IN CINCINNATI, OHIO.

Dr. A. J. Miles, health officer, writes, under date of December 12, that the board of health is making strenuous efforts to prevent the spread of small-pox in the city. Notwithstanding the fact that cases are known to exist in many parts of the city, the number of new cases reported has been decreasing during the past few days. December 13, nine cases were reported; 14th, eight; 15th, seven, and 16th, but four. The total number of cases which have occurred in the city since January last is as follows:

January 1 to October 1	23
During October	28
During November	51
December 1 to 17	65
Total	167

The following circular has been issued by the board of health:

In view of the possible increase of small-pox in this city during the winter, the board of health have issued the following circular, advising every person to vaccinate, and revaccinate, as it is very frequently the case that second vaccinations are successful.

All persons not able to pay for the same will call upon the district physician of their respective wards and be vaccinated.

The floating indigent population will be vaccinated, free of charge, at the health office, daily, between the hours of 11 a. m. and 1 p. m.

STATE LAWS.

SEC. 2118. Duty of physicians, house owners, etc., to give notice of prevalence of infectious diseases. The owner, or agent of the owner, of a house in which a person resides who has the small-pox, or any other disease dangerous to the public health, and the physician called to attend the person so affected, shall, within twenty-four hours after becoming cognizant of the fact, give notice thereof to the board of health; and when a person so affected is removed to a pest-house or hospital, the board of health is empowered to use all necessary means to restrain him of his liberty until the danger of infection or contagion from such disease ceases.

SEC. 2135. Vaccination to be encouraged and provided for. The board of health may take measures and supply agents, and afford inducements and facilities for gratuitous vaccination and disinfection; may afford medical relief to and among the poor of the corporation, as, in its opinion, the protection of the public health may require; and during the prevalence of any epidemic may provide temporary hospitals for such purposes.

SEC. 2143. Railroads, vessels, etc., may be subjected to quarantine. The board of health, or health officer, may, in time of epidemics, or threatened epidemics, establish a quarantine on vessels, railroads, or any class of vehicles used for the purpose of transporting passengers, baggage, or freight; may make such rules or regulations as may be deemed wise and necessary for the protection of the health of the people of the community or State.

SEC. 2121. Punishment of infected persons for escaping, etc. A person removed to a pest-house, or hospital, who willfully leaves or escapes therefrom, before the physician thereof issues a certificate of restored health, shall be fined not less than five nor more than fifty dollars, or imprisoned not less than one nor more than ten days.

SEC. 2137. Penalty for violating order of board of health. Whoever violates any provision of this chapter, or any order of the board of health made in pursuance thereof, or obstructs or interferes with the execution of any such order, or willfully and illegally omits to obey any such order, shall be fined in any sum not exceeding one hundred dollars, or imprisoned for any time not exceeding ninety days, or both; but no person shall be imprisoned under this section for the first offense.

AN ORDINANCE TO PROTECT THE HEALTH OF THE CITIZENS OF CINCINNATI, AND TO PREVENT THE SPREAD OF CONTAGIOUS DISEASES.

SECTION 1. *Be it ordained by the common council of the city of Cincinnati*, That whenever a case of small-pox is found within the limits of the city, the board of police commissioners, or the health officer, are hereby authorized and empowered to exercise complete supervision over such case, so far as to prescribe the number of attendants or nurses, or persons who shall be allowed access to the apartment occupied by the person so afflicted; and it shall be the duty of said health authorities to so restrict the movements of those nursing or in communication with small-pox patients that said persons may be restrained from going about promiscuously among the citizens.

SEC. 2. The board of health and health officer are also hereby authorized and directed to prohibit all sale or disposition of rags, clothing, bedding, carpets, or furniture to dealers or other parties from dwellings in which any small-pox patient may be or may have been, or the washing of clothing or other articles of any kind which may have been used or exposed to infection in the apartments of such patient elsewhere than in said dwelling, until the same shall have been disinfected in a manner satisfactory to the health officer. And, further, said authorities are hereby authorized and instructed to cause any room, house, or part of house in which any patient has been confined by reason of small-pox to be immediately and thoroughly disinfected to the satisfaction of said health officer, and to cause the destruction of all clothing of such patient, or other articles which cannot be disinfected in a manner entirely satisfactory to said officer: *Provided*, That in the event of the destruction of the bedding, clothing, or furniture of poor persons, they shall be reasonably compensated for the loss of the same out of any money in the sanitary fund not otherwise appropriated.

SEC. 3. It shall be the duty of every captain, or commanding officer, of any steamboat or other vessel which may arrive at the port of Cincinnati to report at once to the health officer every case of small-pox that may have occurred or been found on board of said vessel during the voyage or after arrival.

SEC. 4. The making or washing of clothing, other than for the family, in any building in which there is a case of small-pox, or the conveyance of the body of any deceased small-pox patient in any public hack or carriage, are strictly forbidden.

SEC. 5. Any person or persons offending against the provisions of this ordinance shall be subject to a fine not exceeding fifty (50) dollars, or imprisonment in the city work-house for not more than thirty (30) days.

SEC. 6. All ordinances or parts of ordinances heretofore passed inconsistent with this ordinance are hereby repealed, and this ordinance shall take effect and be in force after the earliest period allowed by law.

Passed August 22, A. D. 1879.

By order of the board of health.

A. J. MILES, M. D.,
Health Officer.

ABSTRACTS FROM CONSULAR REPORTS.

ASPINWALL, UNITED STATES OF COLOMBIA.—James Thorington, United States consul, reports 3 deaths from all causes during the week ending December 10, and states that the city is free from diseases of a contagious or infectious character.

ALEXANDRIA, EGYPT.—B. S. de Menasey, United States consular agent reports 165 deaths from all causes during the week ending November 26, giving an annual death-rate of 39.1 per 1,000 of inhabitants. No deaths from contagious or infectious diseases are reported.

ACAPULCO, MEXICO.—John A. Sutter, jr., United States consul, transmits reports for the three weeks ending December 4, during which period there were 20 deaths from all causes. Population, 4,100.

AMSTERDAM, NETHERLANDS.—D. Eckstein, United States consul, reports 155 deaths from all causes during the week ending December 3, giving an annual death-rate of 24.5 per 1,000 of population.

ANTWERP, BELGIUM.—John H. Steuart, United States consul, transmits reports for the two weeks ending December 3. During that period there was a total of 171 deaths from all causes. Population 179,034. Within the period covered by the report there were 5 cases of small-pox reported, 26 cases of typhoid fever, with 6 deaths, 3 cases of diphtheria, and 2 deaths, and 2 deaths from scarlet fever.

AUX CAYES, HAYTI.—Thomas Dutton, United States consular agent, reports 12 deaths from all causes during the two weeks ending November 26. Population, 10,000. The city is reported in good sanitary condition and free from contagious diseases.

BERMUDA.—Charles M. Allen, United States consul, reports a total of 9 deaths, two of which were from accident, during the two weeks ending December 20. Population, 13,948.

BOMBAY, INDIA.—Reports have been received from United States Consul B. F. Farnham for the two weeks ending November 6, during which period there were 12 deaths from cholera, all of which occurred during the week ending November 1. No deaths from cholera were reported during the week ending November 6, while in the corresponding periods in the past five years the average number of deaths from this disease has been 3. In the following table is given the several districts comprising the Bombay presidency, their population, the number of cases and deaths from cholera since the 1st of January last, with the percentage of cases and deaths to population:

Districts.	Population according to census of 1881.	Attacks.	Deaths.	Percentage of attacks to population.	Percentage of deaths to population.	Remarks.

BOMBAY CASTLE, *November 7*, 1881.

The reports received by the health authorities show that the disease is abating, though it still lingers in some of the districts. In the Satara district 95 cases and 35 deaths were reported during the week ending November 6. In the Belgaum collectorate 14 deaths, and in the Ahmednagar 9 deaths. In Nasik cholera is reported in five talukas, though the number of deaths is not given. There are also a few cases reported in Morvi.

The total number of deaths from all causes in Bombay during the weeks ending November 1 and 6 was 401 and 423, respectively, giving an annual death-rate of 25.01 and 25.21 per 1,000 of population. Of the 804 deaths reported during the two weeks 157 were from remittent fever, 167 from diseases of the respiratory system, 28 from diarrhœa, and 24 from dysentery. In the corresponding period of 1880 there were 225 deaths from remittent fever, 83 from diseases of the respiratory system, 28 from diarrhœa, and 24 from dysentery. The total number of births reported during the two weeks was 662.

BUDAPESTH, HUNGARY.—Henry Stern, United States consul, reports 418 deaths during the two weeks ending November 19; births, 509.

CALCUTTA, INDIA.—A. B. Cobb, United States vice-consul general, reports a total of 296 deaths during the week ending November 5, giving an annual death-rate of 35.9 per 1,000 of population as compared with 33.7 in the previous week. Of the deaths reported there were 97 from fevers, 37 from diarrhœal diseases, 20 from tetanus, 7 from phthisis pulmonalis, and 35 from cholera.

CRISTIANIA, NORWAY.—Gerhard Gade, United States consul, reports a total of 51 deaths during the week ending December 3. The epidemic of measles heretofore reported is still increasing, 911 cases and 16 deaths were reported last week. Scarlet fever has also made its appearance, of which disease 7 cases were reported.

DUBLIN, IRELAND.—A. B. Wood, United States consul at Belfast, transmits the mortality report for Dublin and fifteen urban sanitary districts, during the week ending December 3. Aggregate population, 843,812. Total number of deaths from all causes, 372. Average annual death-rate, 22.9. Of the total number of deaths reported there were 3 from small-pox, 3 from measles, 13 from scarlet fever, 2 from diphtheria, 5 from typhus fever, 3 from typhoid fever, 13 from diarrhœa, 38 from phthisis pulmonalis, and 89 from diseases of the respiratory organs. Of the deaths from typhus fever, 3 occurred in Dublin and 2 in Cork.

FAYAL, AZORES.—Samuel W. Dabney, United States consul, reports a total of 23 deaths in the city of Horta, from September 17 to November 5. Population, 7,446.

GENOA, ITALY.—J. F. Hazelton, United States consul, reports 163 deaths from all causes during the two weeks ending December 3, giving an annual death-rate of 23.0 per 1,000 of population.

HAVANA, CUBA.—R. O. Williams, vice-consul-general, reports 104 deaths from all causes during the week ending November 26. Of the deaths reported there were 9 from yellow fever and 3 from typhoid fever.

KOBÉ, JAPAN.—J. Stabel, United States consul, transmits reports for 3 weeks ending November 19, during which period 40 deaths were reported from all causes. Population, 19,248. No cases of disease likely to become epidemic were reported during the period embraced in this report.

LAGUAYRA, VENEZUELA.—Winfield S. Bird, United States consul, reports a total of 11 deaths during the two weeks ending November 27. Population, 8,000. The city is in good sanitary condition, and free from contagious or infectious diseases.

LEIPSIC, SAXONY.—Robert Laird Collier, United States consul, transmits reports for two weeks ending November 26. Total number of deaths from all causes, 126. Population, 151,616. Of the deaths reported, there were from consumption, 27; from diseases of the respiratory organs, 10; from diphtheria, 7; from scarlet fever, 2, and from measles, 4.

LEITH, SCOTLAND.—J. A. Leonard, United States consul, transmits the returns of deaths in Leith and 7 other of the principal towns in Scotland, for the week ending December 3. Aggregate population, 1,206,057. Total number of deaths registered during the week, 438. Average annual death-rate per 1,000, 18.9, as compared with 22.1 in the corresponding week of last year. The rate of mortality ranged from 8.4 at Paisley, to 24.1 at Greenock. Of the deaths registered, there were 11 from measles, 19 from scarlet fever, 14 from diphtheria, 7 from whooping cough, 6 from fever, 10 from diarrhœa, and 103 from bronchitis, pneumonia, and pleurisy.

LONDON, ENGLAND—E. A. Merritt, United States consul-general, transmits the morality report for twenty of the largest English towns during the week ending December 3. The total number of deaths registered was 3,005, giving an average annual death-rate of 20.6 to the aggregate population estimated at 7,608,775. The highest rate of mortality, 26.9 was recorded in Manchester, which has a population of 341,269, and the lowest, 15.1 in Wolverhampton, with a population of 75,934. Of the deaths reported there were 31 from small-pox, 106 from measles, 126 from scarlet fever, 33 from diphtheria, 91 from whooping cough, 60 from fever, and 28 from diarrhœa. Scarlet fever still prevails as an epidemic in Hull, in which place 23 deaths from this disease were reported during the week, making a total of 525 since the beginning of July. In London, 2,508 births and 1,460 deaths were registered during the week. The births were 71, and the deaths 337 below the average numbers in the corresponding week of the last 10 years. The annual death-rate was 19.9 as compared with 21.8 in the preceding week. Among the deaths registered there were 28 from small-pox, 45 from measles, 50 from scarlet fever, 21 from diphtheria, 62 from whooping cough, 1 from typhus fever, 32 from enteric fever, and 15 from diarrhœa. There were, also, 336 deaths referred to diseases of the respiratory organs, of which number 196 resulted from bronchitis, and 98 from pneumonia. The number of deaths from diseases of the respiratory organs has declined steadily for the past two weeks, and was last week 175 below the corrected weekly average. There were 40 cases of typhus and 145 of enteric fever in the fever hospitals. The cases of typhus, however, showed a decline as compared with those under treatment in previous weeks.

MALAGA, SPAIN.—H. C. Marston, United States consul, reports 84 deaths from all causes during the week ending November 27. Population, 115,882. The city is free from diseases likely to become epidemic.

MARACAIBO, VENEZUELA.—E. H. Plumacher transmits reports for four weeks ending November 26. He states that the number of deaths that occur in the city cannot be ascertained. The rains early in the month cleansed the place to some extent, but it is still in a deplorable condition. Despite the filth it is, however, comparatively healthy, and there are no diseases that can be reported as prevailing.

NAPLES, ITALY.—E. H. Smith, United States consul, reports that during the week ending October 1 252 deaths were registered. Of this number 17 were of non-residents, leaving a total of 235 deaths among the resident population, equal to an annual death-rate of 26.5 per 1,000. Number of births reported during the week 306.

NASSAU, N. P. BAHAMAS.—Thomas J. McLain, jr., United States consul, reports, under date of December 10, that the city is in good sanitary condition, and that there are no diseases which can be reported as prevailing. No report of deaths is published by the authorities.

NUREMBERG, BAVARIA.—G. H. Horstmann, United States consul, reports a total of 91 deaths during the two weeks ending November 12. Population, 100,445. Annual death-rate per 1,000, 24.0.

PARIS, FRANCE.—George Walker, United States consul-general, transmits the mortality report for the week ending December 7. The total number of deaths registered was 1,039, giving an annual death-rate of 27.17 per 1,000 of the population. Among the principal causes of death were the following: Typhoid fever, 33; small-pox, 8; measles, 12; diphtheria and croup, 53; meningitis, 56; other cerebro-spinal affections, 110; phthisis pulmonalis, 173; bronchitis, 43; pneumonia, 78; other diseases of the respiratory organs, 69; and diseases of the digestive organs, 40.

POINT A PITRE, GUADALOUPE, W. I.—Charles Bartlett, United States consul, reports 22 deaths from all causes during the week ending November 19. Population 18,000. Bilious fevers are prevalent. The sanitary condition of the city is not good.

PORT AU PRINCE, HAYTI.—John M. Langston, United States minister resident, writes, under date of November 22, that there have been 10 cases and 1 death from small-pox during the week. Of the cases 1 was in the hospital, 6 were soldiers in a building provided for them near the hospital, and 3 were in different parts of the city. Vaccination, especially among the children, is still continued. The weather has not been favorable for the past ten days. Land breezes have prevailed throughout the day, and are not believed to be conducive to public health. He also reports 17 deaths from all causes during the week ending December 6. Of this number there were 3 from small-pox; 20 cases of this disease were reported during the week. On November 30 a special small-pox service was organized and regulations published by the mayor, requiring daily reports to be made concerning the sanitary condition of the several districts of the city, and the designation by flag of each house in which small-pox exists. Vaccination is still continued, to some extent, at public expense, and about 11,000 persons have already been vaccinated. Of the 20 cases reported, 3 are in public hospital and 17 in various parts of the city. Thus far nearly all of the cases have been mild in form.

RIGA, RUSSIA.—N. P. A. Bomholdt, United States consular agent, reports 324 deaths during the month of October. Of this number there were 52 from croup, 26 from consumption, 13 from acute lung diseases, 12 from diphtheria, 10 from typhoid fever, and 4 from small-pox. Number of births reported, 526.

RIO DE JANEIRO, BRAZIL.—Thomas Adamson, United States consul-general, transmits mortality reports for two weeks ending November 19, giving a total of 393 deaths from all causes. Among these were 2 from yellow fever, 11 from small-pox, 1 from typhus fever, 2 from typhoid fever, 11 from pernicious fever, and 75 from consumption. Pulmonary diseases are reported as prevalent.

SANTA CRUZ, TENERIFFE.—W. H. Dabney, United States consul, reports a total of 50 deaths during the three weeks ending November 19. Population, 16,610. Among the principal causes of death were the following: Consumption, 8; pneumonia, 4; bronchitis, 1; typhoid fever, 2; and measles, 7. During the period covered by the report 193 cases of measles were reported.

SHANGHAI, CHINA.—O. N. Denny, consul-general, reports 6 deaths during the two weeks ending October 25, of which number there were 3 from cholera, and 1 from dysentery. Cholera and dysentery prevail among the poorer classes of Chinese, while the health of the foreign population has improved with the advent of cool weather.

[Continued from page 223.]

SANTIAGO DE CUBA.—John C. Landreau, United States consul, reports 104 deaths during the month of November. Of this number, 17 were from yellow fever and 4 from typhoid fever. The number of cases of yellow fever reported during the month was 26, and of typhoid fever 6. All these cases were in the military hospital. The harbor is believed to be healthy, and bills of health are issued in accordance with the rules and regulations of the National Board of Health.

SAN DOMINGO CITY, WEST INDIES.—Paul Jones, United States consul, reports 58 deates during six weeks ending November 20. Of this number, 27 died of small-pox. No other diseases are reported.

SINGAPORE, INDIA.—A. G. Studer writes, under date of October 24, that the city is in good sanitary condition, and the weather favorable. Small-pox is reported as epidemic in Tongkat, a port within the Singapore consular district. The report of the senior medical officer of Penang gives a total of 165 deaths from all causes during the month of September, against 194 in August. No deaths from diseases likely to assume an epidemic form were registered in Penang during the month.

ST. PETERSBURG, RUSSIA.—Edgar Stanton, United States consul-general, reports 1,004 deaths from all causes during the two weeks ending November 12, giving an annual death-rate of 38.6 per 1,000 of population. Of the total number of deaths 472, or 47.0 per cent., were of children under 5 years of age. Typhoid and kindred fevers are reported as prevailing diseases. During the week ending November 26, there were 512 deaths, of which 4 were from small-pox, 48 from typhoid and kindred fevers, and 48 from other contagions or infectious diseases. Of the total number of deaths, 185 were of children under 4 years of age. Typhoid and other fevers are reported prevalent.

TRIPOLI, BARBARY.—John T. Robeson, United States consul, reports a total of 13 deaths from all causes during the week ending November 26. Population, 20,000. The city is reported to be in good sanitary condition.

TURKS AND CAICOS ISLANDS.—John W. Darrell, United States vice-consul, reports 7 deaths from all causes during five weeks ending November 26. Population, 4,732.

REPORTS OF CORRESPONDENTS OF THE NATIONAL BOARD OF HEALTH.

ATLANTA, GEORGIA.—Dr. James B. Baird writes, under date of December 26, that in view of the prevalence of small-pox in the northern cities and its rapid spread to the cities of Richmond, Cincinnati, and Louisville, the board of health has appealed to the city council for the appropriation of a sum to be expended in providing for the vaccination of all who are unprotected, and in arranging for the care of the poorer classes in case small-pox makes its appearance in Atlanta. As yet no cases have occurred. The board of health has employed competent physicians who will visit from house to house throughout the city for the purpose of vaccinating all who require it, and a central dispensary has just been established which is open daily and where all who apply may be vaccinated gratuitously.

DAYTON, WASHINGTON TERRITORY.—Dr. M. Pietrzycki, health officer, writes, under date of December 12, that the total number of cases of small-pox that have occurred in Dayton and surrounding country, within a radius of fifteen miles, since the 1st of October last is 148; total number of deaths, 20. The first cases were diagnosed, by those called to attend them, as chicken-pox, and no precautions were taken. It was not until the disease had begun to spread rapidly that the people became alarmed. A board of health was organized, the disease pronounced to be small-pox, and the necessary regulations adopted. There are at present but three houses in town under quarantine, and no serious case is known to exist. But one new case has been reported within the past two weeks—that of a child in a family in which other cases had occurred.

EAST LIVERPOOL, OHIO.—T. Y. Milligan, secretary of the board of health, reports, under date of December 24, that on the 15th there were 19 cases of small-pox under quarantine. December 16 to 22, inclusive, 14 additional cases were reported; making a total of 33 cases. Of these five have recovered and three have resulted fatally.

FORT WINGATE, NEW MEXICO.—Capt. W. Matthews, assistant surgeon, U. S. Army, reports to the Surgeon-General, under date of December 15, that small-pox has made its appearance within fifteen miles of that post.

GRAND RAPIDS, MICH.—George A. Love, president of the board of health, reports, under date of December 19, that small-pox made its appearance in the city a few weeks since, and 6 cases in different parts of the city have thus far been reported to the board of health. But 1 death has occurred. The first case occurred in the person of a lady, who had recently returned from Chicago; and, her sickness having at first been called malarial fever, a number of persons were exposed before the real nature of the disease became known. Two new cases were reported December 16. These are more than a mile from the other cases and are not known to have had any communication with them.

HAVANA, CUBA.—Advices from Havana state that there were 11 deaths from yellow fever during the week ending December 16. No deaths from small-pox are reported.

LYNCHBURG, VA.—Dr. T. L. Walker, president of the board of health, writes that no cases of small-pox were reported during the week ending December 17.

MARSHALL, TEXAS.—Dr. John H. Pope writes, under date of December 20, that 4 cases of scarlatina and 1 death have been reported in the city within the past four weeks. The origin of the disease is not known.

MERIDIAN, MISS.—Dr. M. J. Lowry, health officer, writes, under date of December 17, that jaundice and typhoid fever, heretofore reported as prevailing, are now decreasing.

MURFREESBORO', TENN.—Dr. J. B. Murfree, president of the board of health, writes, under date of December 17, that typhoid fever still prevails.

PITTSBURGH, PA.—Dr. W. Snively, registrar, reports 30 deaths from small-pox—white 23, colored 7—during the week ending December 17. The number of cases reported during that period was 104.

SAINT LOUIS, MO.—Dr. Luedeking writes, under date of December 17, that 14 cases of small-pox have been sent to hospital during the week, and that 4 deaths have been reported by the physician in charge. No cases are reported in the city. Under date of December 24, that 13 cases of small-pox have been sent to the hospital, six miles south of the city, during the week, and that the physician in charge has reported 5 deaths.

SALEM, VA.—Dr. Frederick Horner reports, under date of December 24, that diphtheria has again made its appearance in that place; this being the third time that this disease has prevailed in Salem during the past year. The disease has been confined to children, among whom 6 fatal cases have occurred.

SILVER CLIFF, COLO.—Dr. A. Comstock writes, under date of December 12, that the general health of that region has greatly improved since last year. Cholera infantum prevailed in July last, and a number of cases of pneumonia occurred last month. The records show an annual death-rate of between 7 and 8 per 1,000 of the population. A disastrous epidemic of typhoid fever occurred in the autumn of 1879, which was, doubtless, caused by the impure water then used by the people. Since then water-works have been introduced and the water is furnished from mountain springs about three miles distant. The supply is abundant, and the water the purest the mountains afford. The fever known as mountain fever has almost wholly disappeared, owing perhaps to the fact that the people are becoming acclimated and are occupying better houses. During the summer the thermometer indicates a range from 75 to 90 degrees between 10 a. m. and 5 p. m., and falls during the night to 65 or 55; thus excluding all malarial conditions.

WACO, TEX.—Dr. H. W. Brown writes, under date of December 10, that there is very little sickness, and that the city is entirely free from diseases of a contagious or infectious character.

WINCHESTER, VA.—Dr. W. S. Love writes that no new cases of small-pox have appeared during the week ending December 17. The two cases reported last week are convalescent. Under date of the 24th instant, he writes that the small-pox cases heretofore reported are convalescent.

NATIONAL BOARD OF HEALTH rooms are at 1410 G street, northwest.
